100% Pass Rate Salesforce Analytics-Admn-201 Valid Test Blueprint | Try Free Demo before Purchase

BONUS!!! Download part of Exam4PDF Analytics-Admn-201 dumps for free: https://drive.google.com/open?id=1wPD-Wp2UQd9LrTiS8udR1Nvp7Cp4xfJT

The Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) actual questions we sell also come with a free demo. Spend no time, otherwise, you will pass on these fantastic opportunities. Start preparing for the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam by purchasing the most recent Salesforce Analytics-Admn-201 exam dumps. You must improve your skills and knowledge to stay current and competitive. You merely need to obtain the Analytics-Admn-201 Certification Exam badge in order to achieve this. You must pass the Salesforce Certified Tableau Server Administrator exam to accomplish this, which can only be done with thorough exam preparation. Download the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam questions right away for immediate and thorough exam preparation.

We are so proud that we own the high pass rate of our Analytics-Admn-201 exam braindumps to 99%. This data depend on the real number of our worthy customers who bought our Analytics-Admn-201 exam guide and took part in the real exam. Obviously, their performance is wonderful with the help of our outstanding Analytics-Admn-201 Exam Materials. We have the definite superiority over the other Analytics-Admn-201 exam dumps in the market. If you choose to study with our Analytics-Admn-201 exam guide, your success is 100 guaranteed.

>> Analytics-Admn-201 Valid Test Blueprint <<

High Pass-Rate Analytics-Admn-201 Valid Test Blueprint Supply you Effective Exam Voucher for Analytics-Admn-201: Salesforce Certified Tableau Server Administrator to Study easily

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the Analytics-Admn-201 Study Materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our Analytics-Admn-201 study materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products. We provide free trial service before the purchase, the consultation service online after the sale, free update service and the refund service in case the clients fail in the test.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 2	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 3	• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 4	• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 5	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Salesforce Certified Tableau Server Administrator Sample Questions (Q18-Q23):

NEW QUESTION # 18
Which Tableau Server process performs the role of a database for metadata?

- A. Backgrounder
- B. Repository
- C. Data Engine

- D. File Store

Answer: B

Explanation:
Tableau Server relies on several processes to function, each with a specific role. The Repository process (powered by PostgreSQL) serves as the database for metadata, storing critical information such as:
* User and group details.
* Permissions and site configurations.
* Workbook and data source metadata (e.g., schedules, subscriptions).
* Option B (Repository): Correct. The Repository is the centralized database that holds all metadata, making it the backbone of Tableau Server's content management. There are typically two instances in an HA setup (one active, one passive), monitored by the Cluster Controller.
* Option A (Data Engine): Incorrect. The Data Engine manages in-memory data processing and extract storage (e.g., .hyper files), not metadata. It's separate from the Repository.
* Option C (Backgrounder): Incorrect. The Backgrounder handles background tasks like extract refreshes and subscriptions, but it doesn't store metadata-it interacts with the Repository to retrieve task details.
* Option D (File Store): Incorrect. The File Store manages physical extract files and workbook assets, not metadata, which is stored in the Repository.
Reference: Tableau Server Documentation - "Tableau Server Processes" (https://help.tableau.com/current /server/en-us/processes.htm).

NEW QUESTION # 19
What process decides when a Repository failover is required?

- A. Backgrounder
- B. Coordination Service
- C. Cluster Controller
- D. Gateway

Answer: C

Explanation:
In a high-availability (HA) Tableau Server setup, the Repository (PostgreSQL) has an active and passive instance. Failover occurs if the active Repository fails. Let's dive into the process:
* HA Setup:
* Two Repository instances across nodes (active/passive).
* Failover switches to the passive instance if the active one becomes unavailable (e.g., crash, network issue).
* Cluster Controller:
* Role: Monitors all processes (e.g., Repository, File Store) across nodes, detecting failures via heartbeats and status checks.
* Failover Decision: If the active Repository stops responding, Cluster Controller initiates failover, promoting the passive instance to active.
* Coordination: Works with Coordination Service (ZooKeeper) to update topology but makes the initial detection call.
* Option A (Cluster Controller): Correct.
* Why: It's the watchdog process, constantly monitoring Repository health and triggering failover when needed.
* Option B (Coordination Service): Incorrect.
* Role: ZooKeeper maintains cluster state and coordinates topology updates post-failover, but doesn't detect the failure-Cluster Controller does.
* Option C (Gateway): Incorrect.
* Role: Routes client requests-unrelated to internal process monitoring or failover.
* Option D (Backgrounder): Incorrect.
* Role: Executes background tasks-no involvement in Repository failover decisions.
Why This Matters: Understanding failover ensures HA reliability-Cluster Controller is the linchpin for resilience.
Reference: Tableau Server Documentation - "High Availability" (https://help.tableau.com/current/server/en-us /ha.htm).

NEW QUESTION # 20
A user named John publishes a workbook named Sales Quota to a project named Sales. The All Users group has the View and Download Workbook/Save As capabilities only to the Sales project. A user named Sandy has the Explorer (can publish) site role,

on the Sales Quota workbook. No other users or groups have permissions to the Sales project. The Sales project is set to Managed by the owner. What are the effective rights for Sandy?

- A. No access
- B. All of the capabilities associated with the Editor rule
- C. View and Download Workbook/Save As
- D. The same rights as John

Answer: C

NEW QUESTION # 21
Which two settings should you configure to allow users to post comments on a visualization? (Choose two.)

- A. Add Comments must be allowed in permissions for the relevant users
- B. Comments must be enabled on the server Settings page
- C. Comments must be enabled on the site Settings page
- D. The relevant users must have a minimum site role of Explorer (can publish)

Answer: A,C

Explanation:
Comments on visualizations foster collaboration in Tableau Server-let's break down the requirements:
* Commenting Prerequisites:
* Site-Level Enablement: Comments must be activated for the site.
* Permission: Users need the "Add Comment" capability on the content.
* Site Role: Minimum role of Viewer allows commenting if permissions are set.
* Option B (Add Comments must be allowed in permissions): Correct.
* Details: In the Permissions dialog (e.g., for a workbook), set "Add Comment" to "Allowed" for users/groups. Default is "Denied" unless explicitly enabled.
* How: Content > Workbooks > Actions > Permissions > Edit Rule.
* Why: Permissions are granular-site enablement alone isn't enough.
* Option D (Comments must be enabled on the site Settings page): Correct.
* Details: Go to Site > Settings > General > Allow Comments-check the box.
* Why: This is a site-wide toggle (default: off). Without it, no one can comment, regardless of permissions.
* Option A (Minimum site role of Explorer - can publish): Incorrect.
* Why: Viewer role suffices if permissions allow-Explorer (can publish) isn't required (it adds publishing, not commenting).
* Option C (Server Settings page): Incorrect.
* Why: Comments are a site-level feature, not server-wide-no such toggle exists in TSM's Server Settings.
Why This Matters: Enabling comments at both site and content levels ensures controlled collaboration-key for team insights.
Reference: Tableau Server Documentation - "Enable Comments" (https://help.tableau.com/current/server/en-us/comment.htm#enable).

NEW QUESTION # 22
Which two commands are valid and complete commands? (Choose two.)

- A. tsm maintenance backup
- B. tsm maintenance cleanup
- C. tsm maintenance ziplogs
- D. tsm maintenance restore

Answer: B,C

Explanation:
TSM commands manage Tableau Server maintenance-let's validate their syntax:
* Command Requirements:
* Some need arguments (e.g., file paths); others are standalone.
* Valid and Complete: Must work as-is without errors.
* Option C (tsm maintenance cleanup): Correct.
* Details: Removes temporary files and old logs-no arguments required (optional flags like -l exist).

* Use: tsm maintenance cleanup-runs fully.
* Option D (tsm maintenance ziplogs): Correct.
* Details: Creates a zip of logs (e.g., tsm-logs.zip)-no arguments needed (optional -d for date range).
* Use: tsm maintenance ziplogs-complete and valid.
* Option A (tsm maintenance backup): Incorrect.
* Why: Requires -f <filename>.tsbak (e.g., tsm maintenance backup -f backup.tsbak)-incomplete without it.
* Option B (tsm maintenance restore): Incorrect.
* Why: Needs -f <filename>.tsbak (e.g., tsm maintenance restore -f backup.tsbak)-not standalone.
Why This Matters: Correct syntax ensures maintenance tasks execute without errors-critical for server health.
Reference: Tableau Server Documentation - "TSM Maintenance Commands" (https://help.tableau.com/current /server/en-us/cli_maintenance_tsm.htm).

NEW QUESTION # 23
......

Our Analytics-Admn-201 study guide boosts many merits and functions. You can download and try out our Analytics-Admn-201 test question freely before the purchase. You can use our product immediately after you buy our product. We provide 3 versions for you to choose and you only need 20-30 hours to learn our Analytics-Admn-201 training materials and prepare the exam. The passing rate and the hit rate are both high. We provide 24-hours online customer service and free update within one year. And if you have a try on our Analytics-Admn-201 Exam Questions, you will find that there are many advantages of our Analytics-Admn-201 training materials.
