How do Real4Prep Cloudera CDP-3002 Exam Questions Help You in Exam Preparation?

The CDP-3002 Mock Exams not just give you a chance to self-access before you actually sit for the certification exam, but also help you get an idea of the Cloudera exam structure. It is well known that students who do a mock version of an exam benefit from it immensely. Some Cloudera certified experts even say that it can be a more beneficial way to prepare for the CDP Data Engineer - Certification Exam exam than spending the same amount of time studying.

Cloudera CDP Data Engineer - Certification Exam Sample Questions (Q160-Q165):

NEW QUESTION # 160

You notice degraded read performance on an Iceberg table after many updates and deletes. What maintenance task should you perform to improve this?

- A. Delete old snapshots
- **B. Rewrite manifest files**
- C. Rebuild the Iceberg metadata table
- D. Compact data files

Answer: B

Explanation:

Iceberg's "rewrite manifests" procedure consolidates metadata, eliminates stale entries, and can significantly improve read performance for heavily modified tables.

NEW QUESTION # 161

In Hive, what impact does setting the `hive.exec.dynamic.partition.mode` to `nonstrict` have on dynamic partitioning operations?

- A. It restricts the insertion of data to existing partitions only.
- **B. It allows the creation of new partitions dynamically based on the input data values.**
- C. It disables dynamic partitioning, requiring all partitions to be predefined.
- D. It enforces that at least one static partition be specified in the query.

Answer: B

Explanation:

Setting `hive.exec.dynamic.partition.mode` to `nonstrict` in Hive configuration allows for the creation of new partitions dynamically based on the input data values during data insertion operations. This mode removes the restriction that requires at least one static partition to be specified in the query, thereby providing greater flexibility in managing and organizing data into partitions based on the actual values encountered at runtime.

NEW QUESTION # 162

In a PySpark application running on Kubernetes, you want to enable dynamic allocation of Executors. Which configuration setting is essential to turn on this feature?

- A. `'spark.kubernetes.executor.dynamicAllocation'`
- B. `'spark.executor.instances'`
- C. `'spark.kubernetes.dynamicAllocation.enabled'`
- **D. `'spark.dynamicAllocation.enabled'`**

Answer: D

Explanation:

The configuration `'spark.dynamicAllocation.enabled'` is used to enable the dynamic allocation feature in Spark applications. This feature allows Spark to dynamically adjust the number of Executor pods in Kubernetes based on the current workload.

NEW QUESTION # 163

You want to perform an Iceberg table join in CDP using Spark SQL, but you notice it's much slower than expected. What could be some of the reasons? (Choose two)

- A. Iceberg version mismatch between Spark and CDP.
- B. Spark's dynamic query execution is enabled.
- **C. One of the tables isn't partitioned effectively.**
- **D. Spark is using nested loop joins instead of broadcast hash joins due to table sizes.**

- E. You're joining on a column with low cardinality (few distinct values).

Answer: C,D

NEW QUESTION # 164

You're working with a complex DataFrame containing nested structures (e.g., arrays of structs). How can you access and manipulate data within these nested structures?

- A. Convert the nested data into a simpler format like a single-level DataFrame
- B. Implement custom recursive functions to navigate through the nested structure
- C. Directly access elements using their position within the nested structure
- **D. Leverage Spark SQL's built-in functions like explode and struct**

Answer: D

Explanation:

While direct access A might work for simple cases, it's not flexible for complex structures. Custom functions C can be complex and error-prone.

Spark SQL provides functions like explode to flatten arrays and struct to create complex structures, allowing you to efficiently work with and manipulate nested data.

NEW QUESTION # 165

.....

A steadily rising competition has been noted in the tech field. Countless candidates around the globe aspire to be CDP Data Engineer - Certification Exam in this field. Once you become Cloudera certified, a whole new scope opens up to you and you are immediately hired by reputed firms. Even though the CDP Data Engineer - Certification Exam certification boosts your career options, you have to pass the CDP-3002 Exam.
