HP Advanced HPE Storage Integrator Solutions Written Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

A pool of Microsoft SQL servers started to use the Alletra 6000 family array six months ago. The data growth has been higher than expected, and the performance of the databases is facing some latency issues.

Which method would allow both capacity and performance to grow when expanding the array, while keeping the management simple?

- A. By adding more arrays and capacity to a single scale-out group.
- B. By including more NIC cards to load balance host traffic.
- C. By selecting more flash to cache ratio on the expansion shelves.
- D. By initially selecting the timeless storage option for the array.

Answer: A

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE Alletra 6000 is a scale-out architecture array. Adding more arrays to a single scale-out group increases both performance (IOPS, throughput) and capacity, while maintaining single-pane management via HPE Data Services Cloud Console. This is the most efficient way to address both capacity growth and latency reduction for SQL workloads.

Distractors:

B: Adding NICs may help with throughput but not backend latency or capacity scaling.

C: Flash-to-cache ratios can optimize read caching but don't fundamentally increase system-wide performance.

D: Timeless storage is a procurement/licensing option, not a performance/capacity scaling method.

Key Concept: Alletra 6000 scale-out clustering for balanced growth of capacity and performance.

NEW QUESTION # 17

Select the scenario where implementing FCoE would be an appropriate solution.

- A. A tech startup is developing an AI-based application that relies heavily on machine learning models. The team needs a solution that allows them to access and process large datasets in the cloud.
- B. A corporation needs to replicate data between data centers in different countries. The data must be synchronized in real-time across a WAN, and the solution must tolerate variable network conditions with minimal impact on performance.
- C. A company with data centers in different states wants to establish a unified SAN infrastructure. The goal is to centralize storage management across all sites, using a single protocol that can efficiently handle high-latency, long-distance connections between data centers.
- D. A large enterprise data center with existing Fibre Channel SANs is looking to reduce hardware complexity and costs by consolidating their storage and production networks onto a single infrastructure, while maintaining high performance for mission-critical applications.

Answer: D

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

Option A is correct because Fibre Channel over Ethernet (FCoE) is designed for large enterprise environments that already have

Fibre Channel (FC) infrastructures but want to simplify cabling and reduce hardware by converging LAN and SAN traffic over a single Ethernet fabric. FCoE retains the efficiency, low latency, and reliability of Fibre Channel while leveraging Ethernet to minimize physical infrastructure costs.

This aligns with HPE's best practices for environments using HPE Alletra 9000/Primera or HPE Nimble arrays connected to converged networks where cost reduction and high performance are equally important.

Analysis of Incorrect Options (Distractors):

B: Real-time replication across WANs requires protocols like HPE 3PAR/Alletra Remote Copy, asynchronous/synchronous replication, or HPE Peer Persistence. FCoE is not suited for high-latency WANs because it is a LAN protocol designed for short distances within a data center.

C: For inter-data center SAN unification, FCIP (Fibre Channel over IP) or iSCSI are more suitable. FCoE does not handle long-distance high-latency links effectively.

D: A startup building AI applications with cloud workloads typically benefits from object storage (HPE Scality RING, HPE GreenLake for File and Object) or direct cloud-native APIs (S3/Blob). FCoE is irrelevant in this use case since it is on-prem and infrastructure-focused.

Key Concept:

The question is testing knowledge of FCoE and its appropriate deployment scenarios - specifically, its role in consolidating storage and network traffic inside enterprise data centers while preserving Fibre Channel protocol advantages.

NEW QUESTION # 18

Refer to the exhibit.

A junior engineer is expanding a StoreOnce deployment for a law firm with a hybrid environment. The customer already has Veeam backing up to StoreOnce 3660 Gen 4 at both primary and secondary sites. They want to add Cloud Bank Storage (CBS) to archive into AWS Glacier tier for compliance. The junior engineer has added Cloud Bank licenses for the 80TB onsite capacity at the primary office.

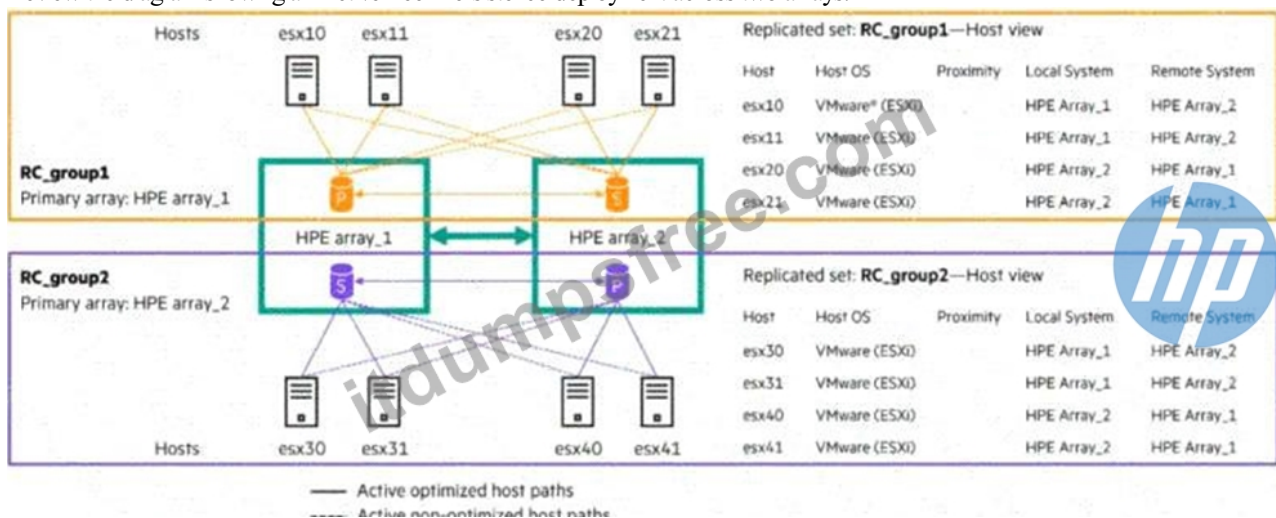

Question: What does the junior engineer need to add to enable this scenario?

- A. Catalyst License for StoreOnce-B
- B. Cloud Bank Storage for AWS Glacier
- C. Federated Management
- D. Detach License on StoreOnce-A

Answer: D

NEW QUESTION # 19

Review the diagram showing an Active Peer Persistence deployment across two arrays.

Question: Which Host Proximity Parameter should be configured for ESX31 to ensure localized access?

- A. Exclusive

- Answer: D**

Exhibit shows HPE StoreOnce Catalyst Store Security Settings:

- A. Server-Controlled and ISV-Controlled Data Immutability values do not need to match when both are configured.
- B. Maximum ISV Controlled Data Immutability Retention allows the ISV backup application to manage item-level immutability.
- C. The Maximum ISV Controlled Data Immutability Retention parameter must be set to 0 for optimal Veeam v12 support.
- D. Server-Controlled Data Immutability is required to achieve the highest immutability with Veeam v12 backups.
