## ACD201 Trustworthy Source | Reliable ACD201 Exam Cram

With the number of people who take the exam increasing, the ACD201 exam has become more and more difficult for many people. A growing number of people have had difficulty in preparing for the ACD201 exam, and they have a tendency to turn to the study materials. However, a lot of people do not know how to choose the suitable study materials. We are willing to recommend the ACD201 Exam Questions from our company to you. We can make a promise to you that our study materials will be the best ACD201 study guide for you to prepare for your exam.

## Appian Senior Developer Sample Questions (Q97-Q102):

**NEW QUESTION # 97**
Which two items are configured in the Admin Console when you create a web API? (Choose two.)

- A. LDAP Authentication
- B. API Key

- C. Service Account
- D. Access Control Policies

**Answer: B,C**

Explanation:
API Keys are configured in the Admin Console to control and secure access to web APIs.
Service Accounts are managed in the Admin Console to allow external systems to authenticate and call the web APIs.

**NEW QUESTION # 98**
You need to implement a requirement where a third-party system starts a process in Appian. The third-party system can invoke a service only through Web Services Description Language (WSDL).
What should you do to start the process in Appian?

- A. Create a default WSDL URL using process model UUID.
- B. Expose process model as a web service.
- C. Create a custom plug-in.

**Answer: B**

**NEW QUESTION # 99**
You need to connect to an external system using OAuth 2.0: SAML Bearer Assertion Flow authentication type, which requests access to an API on behalf of a signed in user.
This standard has the several steps involved with the SAML Bearer Assertion Flow.
Which two steps should you perform? (Choose two.)

- A. Add required users and groups to OAuth 2.0 SAML Bearer Assertion Users system group.
- B. Enable the checkbox labeled OAuth 2.0: SAML Bearer Assertion Flow in the Admin Console.
- C. Create a Bearer Assertion process flow to authenticate the user.
- D. Upload Client Certificate to Connected System.

**Answer: A,D**

Explanation:
Adding required users and groups to the OAuth 2.0 SAML Bearer Assertion Users system group ensures only authorized users can initiate the authentication flow.
Uploading a client certificate to the Connected System is needed for the assertion and secure communication required by the SAML Bearer Assertion Flow.

**NEW QUESTION # 100**
A view is created with the primary table PERSON and is joined using a left join with the APPOINTMENT table on the column "PERSON_ID". There is a one-to-many relationship between the PERSON and APPOINTMENT tables.
A Custom Data Type (CDT) and a data store entity have been created based on this view, with the primary key being "PERSON_ID".
Review the data presented in the PERSON and APPOINTMENT tables:
Which two statements are true when the following query entity is executed? (Choose two.)

- A. Appian makes one more query to the database(other than the actual query to fetch the data) to get the totalCount based on the applied filters and paging info.
- B. result totalCount is 3
- C. Appian makes one more query to the database(other than the actual query to fetch the data) to get the totalCount based on the applied filters.
- D. result totalCount is 1

**Answer: C,D**

Explanation:
Appian makes an additional query to the database (other than the main query for data) to retrieve the totalCount when

fetchTotalCount: true() is used.
The result totalCount is 1, as there is only one person (PERSON_ID 1101) being filtered, even though there are multiple "New" appointments for that person; with a CDT based on PERSON_ID as the primary key, only one row is counted per person.

**NEW QUESTION # 101**
You're building an application with a review workflow.
Each submission must be approved by three users who can each approve or reject their request, and leave a comment. This action changes the status of the submission to 'Approved' or 'Rejected' correspondingly, and pushes the review to the previous or next assignee.
Which data model captures the workflow requirements appropriately?

- A. Two tables:
  Review with columns id, statusId, comment, user
  Ref Status with columns id, value
- B. Two tables:
  Review with columns id, statusId, comment, user1, user2, user3
  Ref Status with columns id, value
- C. Three tables:
  Review to store id, statusId, comment
  Ref Status with columns id, value
  Review User with columns id, reviewId, user

**Answer: C**

Explanation:
Using three tables - Review, Ref Status, and Review User - enables you to track each user's approval or rejection, comments, and status changes for each review, supporting a flexible, normalized workflow for multiple reviewers.

**NEW QUESTION # 102**
......

If you just hold a diploma, it is very difficult to find a satisfactory job. Companies want you to come up with a ACD201 certificate that better proves your strength. ACD201 training materials can help you achieve this goal faster.
