## Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q28-Q33):

### NEW QUESTION # 28

According to MuleSoft, which major benefit does a Center for Enablement (C4E) provide for an enterprise and its lines of business?

- A. Accelerating self-service by the lines of business**
- B. Centrally managing return on investment (ROI) reporting from lines of business to leadership
- C. Enabling Edge security between the lines of business and public devices
- D. Centralizing project management across the lines of business

### Answer: A

Explanation:

Center for Enablement (C4E): Unlike a Center of Excellence (CoE) which centralizes work, a C4E focuses on enablement. Self-Service: The primary goal is to harvest reusable assets and best practices so that the Lines of Business (LOB) can build their own projects using these assets. This accelerates self-service and removes Central IT as the bottleneck13.

Why others are incorrect:

Centralizing Project Management (D): C4E promotes decentralized delivery (federation), not centralized management.

### NEW QUESTION # 29

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

- A. Switch from a design-first to a code-first approach for IT development
- B. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- C. Hire more IT developers, architects, and project managers to increase IT delivery
- D. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**

### Answer: D

Explanation:

The IT Delivery Gap: This question addresses the "IT Delivery Gap"-the widening gap between business demands and IT's capacity to deliver.

The Solution (New Operating Model): MuleSoft recommends shifting from a centralized factory model to an Asset-Based consumption model.

Decoupling (Option A): By using API-led Connectivity:

Central IT builds reusable System APIs (unlocking core assets/systems of record) and governs them

Lines of Business (LOB) consume these assets to build their own Process and Experience APIs (Innovation)2.

Why others fail:

- (B) Hiring doesn't scale linearly with exponential demand.
- (C) Removing governance creates security risks ("Shadow IT").
- (D) Code-first ignores reuse and leads to technical debt.

### NEW QUESTION # 30

Which Anypoint Platform component helps integration developers discover and share reusable APIs, connectors, and templates?

- A. API Manager
- B. Design Center
- **C. Anypoint Exchange**
- D. Anypoint Studio

#### Answer: C

Explanation:

Anypoint Exchange: This is the "marketplace" or central repository of the Anypoint Platform<sup>14</sup>.

Discovery & Reuse: Its primary purpose is to allow developers to publish their assets (APIs, Connectors, Templates) so that other developers can find ("discover") and reuse them. This drives the efficiency of the API-led connectivity model<sup>15</sup>.

Why others are incorrect:

Anypoint Studio: The IDE for building applications<sup>16</sup>.

API Manager: For governing and securing running APIs<sup>17</sup>.

Design Center: For designing API specifications and flows<sup>18</sup>.

### NEW QUESTION # 31

According to MuleSoft, which principle is common to both Service Oriented Architecture (SOA) and API-led connectivity approaches? <sup>11</sup>

- A. Service centralization
- B. Service statefulness
- C. Service interdependence
- **D. Service reusability**

#### Answer: D

Explanation:

Comprehensive and Detailed Explanation:

The Shared Goal: Both SOA (an older architectural style) and API-led Connectivity (MuleSoft's modern approach) aim to solve the problem of "Spaghetti Code" by breaking monolithic applications into smaller pieces.

Reusability: The core promise of both is Reusability.

SOA: Aimed to create reusable web services (often SOAP).

API-led: Focuses on creating reusable Assets (System, Process, and Experience APIs) that can be discovered and self-served by other teams.

The Difference: While the goal (Reuse) is the same, SOA often failed due to heavy governance and lack of discoverability. API-led connectivity improves on this by emphasizing consumption and self-service via the Anypoint Exchange.

### NEW QUESTION # 32

According to MuleSoft's API development best practices, which type of API development approach starts with writing and approving an API contract?

- A. Agile
- B. Implement-first
- C. Catalyst
- **D. Design-first**

#### Answer: D

Explanation:

Design-First: This approach dictates that the API Contract (the Specification, e.g., RAML/OAS) must be written, reviewed, and

approved before any implementation code is written11.

The Contract: The "Contract" serves as the agreement between the API provider and the consumer.

Why others are incorrect:

Implement-first: You write the code (Mule flows) first, and the contract is generated from the code (or ignored).

Catalyst: Is a broader delivery methodology, not specifically the "Contract-first" technical approach.
