NEW QUESTION # 23
The VDC can be used with the Huawei video conferencing platform to provide rich conference control functions. Conference control settings can be customized, and conference control shortcut keys and descriptions can be set.

- A. TRUE
- B. FALSE

Answer: A

Explanation:
The Huawei Video Conferencing Desktop Client (VDC) offers comprehensive conference-control capabilities, allowing you to tailor control settings and define custom shortcut keys with descriptive labels for streamlined operation.

NEW QUESTION # 24
In the collaboration solution architecture, which of the following network elements are deployed at the media processing layer? (Choose all that apply.)

- A. Box 310
- B. SMC
- C. VP9860
- D. CloudRSE

Answer: C,D

Explanation:
The media processing layer handles core media functions such as audio/video encoding, decoding, mixing, recording, and streaming. The VP9860 is Huawei's MCU media server - deployed precisely in this media processing (media switching) layer to provide high-density encoding/decoding and mixing capabilities. CloudRSE (Cloud Recording & Streaming Engine) delivers recording and streaming services, which are also key media processing functions within this layer.

NEW QUESTION # 25
Which of the following statements is false about point-to-point calls?

- A. During a point-to-point call, the GK receives two call requests.
- B. During a point-to-point call, H.245 performs capability set matching before the logical channel is opened.
- C. During a point-to-point call, the called endpoint sends a call request to the GK after receiving a SETUP message.
- D. During a point-to-point call, the Alerting signaling is used during the H.225/RAS connection.

Answer: D

Explanation:
Alerting is part of the H.225 call-signaling sequence, not the RAS interface, so it is not used over the RAS channel.
