SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q28-Q33):

NEW QUESTION # 28

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- A. Define a Visibility Condition in the Conditions tab
- B. Enable field property "Enable for Template Field Setter" in the Advanced tab
- C. Enable field property "Use relationship chooser" in the Advanced tab
- **D. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab**
- E. Load Relation types and Relation entries

Answer: D

Explanation:

To filter a custom field's available values based on another field's value in SAP Ariba, you populate the "Relation Name" and "NameTableConstraintFieldPath" properties in the field's Advanced tab. This configuration links the field to a predefined relation type and specifies the constraint field used for filtering.

Simply loading relation types (B) is a prerequisite but does not configure filtering on the field itself. Visibility conditions (C) control whether a field is shown, not the filtering of its values. Enabling "Use relationship chooser" (D) is necessary but insufficient alone without defining the relation and constraint field. The "Enable for Template Field Setter" (E) option is unrelated to filtering. This filtering enables dynamic picklists where options depend on another field's selection, improving data accuracy and user experience.
