## CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q249-Q254):

### NEW QUESTION # 249

Which configuration file contains the structure of the Security Server showing the port numbers, corresponding protocol name, and status?

- A. \$FWDIR/conf/fwauthd.conf
- B. \$FWDIR/state/fwauthd.conf
- C. \$FWDIR/conf/fwauth.conf
- D. \$FWDIR/database/fwauthd.conf

**Answer: A**

Explanation:

The configuration file that contains the structure of the Security Server showing the port numbers, corresponding protocol name, and status is \$FWDIR/conf/fwauthd.conf. This file is used for configuring authentication services in Check Point Security Servers.

References: Check Point documentation or training materials related to Security Server configuration.

### NEW QUESTION # 250

Which of the following links will take you to the SmartView web application?

- A. <https://<Security Management Server host name>smartviewweb>
- B. <https://<Security Management Server IP Address>/smartview>
- C. <https://<Security Management Server IP Address>/smartview/>
- D. <https://<Security Management Server host name>/smartviewweb/>

**Answer: C**

Explanation:

Explanation

The SmartView web application is a web-based interface that allows you to view and analyze logs and events from your Security Gateways and Management Servers1. To access the SmartView web application, you need to use the following link:

<https://<Security Management Server IP Address>/smartview/>. This link will prompt you to enter your credentials and then take you to the SmartView dashboard. The other options are not correct because:

A: The link <https://<Security Management Server host name>/smartviewweb/> is missing a slash (/) between the host name and smartviewweb.

C: The link <https://<Security Management Server host name>smartviewweb> is missing a slash (/) after the host name and before smartviewweb.

D: The link <https://<Security Management Server IP Address>/smartview> is missing a slash (/) at the end.

### NEW QUESTION # 251

True or False: In R81, more than one administrator can login to the Security Management Server with write permission at the same

time.

- A. False, only one administrator can login with write permission.
- B. True, every administrator works on a different database that is independent of the other administrators.
- C. False, this feature has to be enabled in the Global Properties.
- **D. True, every administrator works in a session that is independent of the other administrators.**

**Answer: D**

Explanation:

In R81, more than one administrator can login to the Security Management Server with write permission at the same time. This feature is enabled by default and allows concurrent administration of the security policy.

Every administrator works in a session that is independent of the other administrators. Changes made by one administrator are not visible to others until they are published. Administrators can also lock objects to prevent others from editing them until they are unlocked. References: R81 Security Management Administration Guide, page 43.

#### **NEW QUESTION # 252**

Alice & Bob are going to use Management Data Plane Separation and therefore the routing separation needs to be enabled. Which of the following command is true for enabling the Management Data Plane Separation (MDPS):

- **A. set mdps mgmt plane on**
- B. set mdps data plane off
- C. set mdps split plane on
- D. set mdps split brain on

**Answer: A**

Explanation:

Explanation

The correct command for enabling the management data plane separation (MDPS) is set mdps mgmt plane on. This command enables routing separation between management and data planes on a security gateway.

This means that management traffic will use a different routing table than data traffic, which can improve security and performance.
