Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cybersecurity: This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.

Topic 2	<ul style="list-style-type: none"> • Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
Topic 3	<ul style="list-style-type: none"> • Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.

PCCP Reliable Exam Voucher - New PCCP Exam Review

Beyond knowing the answer, and actually understanding the PCCP test questions puts you one step ahead of the test. Completely understanding a concept and reasoning behind how something works, makes your task second nature. Your PCCP quiz will melt in your hands if you know the logic behind the concepts. Any legitimate PCCP prep materials should enforce this style of learning - but you will be hard pressed to find more than a PCCP practice test anywhere other than TorrentVCE.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q204-Q209):

NEW QUESTION # 204

What is a function of SSL/TLS decryption?

- A. It protects users from social engineering.
- B. It applies to unknown threat detection only.
- C. It reveals malware within web-based traffic.
- D. It identifies IoT devices on the internet.

Answer: C

Explanation:

SSL/TLS decryption allows security tools to inspect encrypted traffic, enabling them to detect hidden malware, command-and-control communication, or data exfiltration that would otherwise bypass inspection if left encrypted.

NEW QUESTION # 205

Which two services does a managed detection and response (MDR) solution provide? (Choose two.)

- A. Periodic firewall updates
- B. Incident impact analysis
- C. Improved application development
- D. Proactive threat hunting

Answer: B,D

Explanation:

Managed Detection and Response (MDR) services combine incident impact analysis and proactive threat hunting to enhance organizational security posture. Incident impact analysis assesses the severity, scope, and potential damage of identified threats, helping prioritize responses. Proactive threat hunting involves skilled analysts searching for hidden threats that automated detection may miss, leveraging threat intelligence and behavioral analytics. Palo Alto Networks' MDR integrates Cortex XDR and human expertise to detect, investigate, and remediate sophisticated threats early. Unlike routine firewall updates or development processes, MDR is focused on active threat discovery and comprehensive incident management.

NEW QUESTION # 206

Why is it important to protect East-West traffic within a private cloud?

- A. East-West traffic contains more session-oriented traffic than other traffic
- B. East-West traffic contains more threats than other traffic
- C. East-West traffic uses IPv6 which is less secure than IPv4
- D. All traffic contains threats, so enterprises must protect against threats across the entire network

Answer: D

Explanation:

East-West traffic is the lateral movement of data packets between servers within a data center, or across private and public clouds¹. This type of traffic has grown substantially with the proliferation of data centers and cloud adoption, and it now surpasses the conventional North-South traffic that goes in or out of the network². Therefore, it is important to protect East-West traffic from potential malicious actors and breaches, as threats can arise internally and move laterally without ever touching the traditional network perimeter¹². By inspecting and monitoring all East-West traffic, organizations can effectively block the lateral movement of threat actors, increase network visibility, protect vital applications and data, and lower costs and risks for distributed operations²³.

NEW QUESTION # 207

From which resource does Palo Alto Networks AutoFocus correlate and gain URL filtering intelligence?

- A. MineMeld
- B. BrightCloud
- C. PAN-DB
- D. Unit 52

Answer: C

Explanation:

When you enable URL Filtering, all web traffic is compared against the URL Filtering database, PAN-DB, which contains millions of URLs that have been grouped into about 65 categories.

NEW QUESTION # 208

Which network analysis tool can be used to record packet captures?

- A. Netman
- B. Smart IP Scanner
- C. Angry IP Scanner
- D. Wireshark

Answer: D

Explanation:

Wireshark is a network analysis tool that can capture packets from various network interfaces and protocols. It can display the captured packets in a human-readable format, as well as filter, analyze, and export them. Wireshark is widely used for network troubleshooting, security testing, and education purposes¹².
