Dump AWS-Certified-Developer-Associate Torrent - Unparalleled Pdf AWS Certified Developer Associate Exam (DVA-C02) Format

Under the guidance of our AWS-Certified-Developer-Associate preparation materials, you are able to be more productive and efficient, because we can provide tailor-made exam focus for different students, simplify the long and boring reference books by adding examples and diagrams and our experts will update AWS-Certified-Developer-Associate Guide dumps on a daily basis to avoid the unchangeable matters. You can finish your daily task with our AWS-Certified-Developer-Associate study materials more quickly and efficiently.

Amazon Web Services (AWS) has become one of the most popular cloud platforms in the world, powering millions of businesses around the globe. The AWS Certified Developer - Associate exam is designed for software developers who want to demonstrate their knowledge of AWS and its applications in building and deploying cloud-based applications. AWS Certified Developer Associate Exam (DVA-C02) certification exam is perfect for those who are looking to pursue a career in cloud computing and want to validate their skills in AWS development.

Who should take the Amazon AWS-Developer: AWS Certified Developer-Associate Exam

The AWS Certified Developer Associate certification was developed for IT professionals who remain in development positions and who also have many years of hands-on experience in designing and storing AWS-based software. AWS Developer Associate Certification verifies the candidate's understanding of these topics and their skills; Understanding of the main AWS solutions, using the best standard design techniques. Efficiency via AWS in the development, implementation, and debugging of cloud-based applications.

The AWS Certified Developer-Associate test is designed for people who play a role in the development and have one or more years of hands-on experience in the development and maintenance of an AWS-based application.

Pass Guaranteed Quiz AWS-Certified-Developer-Associate - Professional Dump AWS Certified Developer Associate Exam (DVA-C02) Torrent

According to the different demands from customers, the experts and professors designed three different versions for all customers. According to your need, you can choose the most suitable version of our AWS Certified Developer Associate Exam (DVA-C02) guide torrent for yourself. The three different versions have different functions. If you decide to buy our AWS-Certified-Developer-Associate Test Guide, the online workers of our company will introduce the different function to you. You will have a deep understanding of the three versions of our AWS-Certified-Developer-Associate exam questions. We believe that you will like our products.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q257-Q262):

NEW QUESTION # 257
AWS CodeBuild builds code for an application, creates the Docker image, pushes the image to Amazon Elastic Container Registry (Amazon ECR), and tags the image with a unique identifier.
If the Developers already have AWS CLI configured on their workstations, how can the Docker images be pulled to the workstations?

- A. Run the output of the following:aws ecr get-download-url-for-layerand then run:docker pull REPOSITORY URI : TAG
- B. Run the following:docker pull REPOSITORY URI : TAG
- C. Run the following:aws ecr get-loginand then run:docker pull REPOSITORY URI : TAG
- D. Run the output of the following:aws ecr get-loginand then run:docker pull REPOSITORY URI : TAG

Answer: D

Explanation:

NEW QUESTION # 258
A developer is building an application on Amazon EC2. The developer encountered an "Access Denied" error on some of the API calls to AWS services while testing. The developer needs to modify permissions that have been already given to the instance.
How can these requirements be met with minimal changes and minimum downtime?

- A. Update the attached IAM role adding the needed permissions
- B. Stop the instance
  Update the attached IAM role adding the needed permissions
  Start the instance
- C. Delete the existing IAM role Attach a new IAM role with the needed permissions
- D. Make a new IAM role with the needed permissions
  Stop the instance. Attach the new IAM role to the instance
  Start the instance

Answer: A

NEW QUESTION # 259
A Security Administrator at a university is configuring a fleet of Amazon EC2 instances. The EC2 instances are shared among students, and non-root SSH access is allowed. The Administrator is concerned about students attacking other AWS account resources by using the EC2 instance metadata service.
What can the Administrator do to protect against this potential attack?

- A. Log all student SSH interactive session activity.
- B. Install the Amazon Inspector agent on the instances.

- C. Implement iptables-based restrictions on the instances.
- D. Disable the EC2 instance metadata service.

Answer: C

NEW QUESTION # 260
A developer has observed an increase in bugs in the AWS Lambda functions that a development team has deployed in its Node is application. To minimize these bugs, the developer wants to impendent automated testing of Lambda functions in an environment that Closely simulates the Lambda environment.
The developer needs to give other developers the ability to run the tests locally. The developer also needs to integrate the tests into the team's continuous integration and continuous delivery (Ct/CO) pipeline before the AWS Cloud Development Kit (AWS COK) deployment.
Which solution will meet these requirements?

- A. Create sample events based on the Lambda documentation. Create automated test scripts that use the cdk local invoke command to invoke the Lambda functions. Check the response Document the test scripts for the other developers on the team Update the CI/CD pipeline to run the test scripts.
- B. Create sample events based on the Lambda documentation. Create a Docker container from the Node is base image to invoke the Lambda functions. Check the response Document how to run the Docker container for the more developers on the team update the CI/CD pipeline to run the Docker container.
- C. Install a unit testing framework that reproduces the Lambda execution environment. Create sample events based on the Lambda Documentation Invoke the handler function by using a unit testing framework. Check the response Document how to run the unit testing framework for the other developers on the team. Update the OCD pipeline to run the unit testing framework.
- D. Install the AWS Serverless Application Model (AWS SAW) CLI tool Use the Sam local generate-event command to generate sample events for me automated tests. Create automated test scripts that use the Sam local invoke command to invoke the Lambda functions. Check the response Document the test scripts tor the other developers on the team Update the CI/CD pipeline to run the test scripts.

Answer: D

Explanation:
This solution will meet the requirements by using AWS SAM CLI tool, which is a command line tool that lets developers locally build, test, debug, and deploy serverless applications defined by AWS SAM templates. The developer can use sam local generate-event command to generate sample events for different event sources such as API Gateway or S3. The developer can create automated test scripts that use sam local invoke command to invoke Lambda functions locally in an environment that closely simulates Lambda environment.
The developer can check the response from Lambda functions and document how to run the test scripts for other developers on the team. The developer can also update CI/CD pipeline to run these test scripts before deploying with AWS CDK. Option A is not optimal because it will use cdk local invoke command, which does not exist in AWS CDK CLI tool. Option B is not optimal because it will use a unit testing framework that reproduces Lambda execution environment, which may not be accurate or consistent with Lambda environment. Option D is not optimal because it will create a Docker container from Node.js base image to invoke Lambda functions, which may introduce additional overhead and complexity for creating and running Docker containers.

NEW QUESTION # 261
A company is hosting a workshop for external users and wants to share the reference documents with the external users for 7 days.
The company stores the reference documents in an Amazon S3 bucket that the company owns.
What is the MOST secure way to share the documents with the external users?

- A. Create a role that has read-only access to the S3 bucket. Share the Amazon Resource Name (ARN) of this role with the external users.
- B. Create temporary 1AM users that have read-only access to the S3 bucket. Share the access keys with the external users. Expire the credentials after 7 days.
- C. Move the documents to an Amazon WorkDocs folder. Share the links of the WorkDocs folder with the external users.
- D. Use S3 presigned URLs to share the documents with the external users. Set an expiration time of 7 days.

Answer: D

NEW QUESTION # 262
