## AD0-E117 Valid Test Cram - AD0-E117 Study Material

Yes, as a lot of our loyal customers who have passed the AD0-E117 exam and got the certification said that more than the AD0-E117 certification, they felt they had been benifited more for they had obtained the knowledge and apply it in the daily work, which can help them finish all tasks efficiently. Then they do not need to work overtime. It is necessary to learn our AD0-E117 Guide materials if you want to own a bright career development.

Adobe Experience Manager (AEM) Architect Master Certification is a high-level credential offered by Adobe, which validates an individual's expertise in developing and managing complex AEM solutions. The Adobe AD0-E117 Exam is designed to test the knowledge and skills of experienced AEM architects in planning, designing, and implementing enterprise-level AEM solutions.

## Adobe Experience Manager Architect Master Sample Questions (Q17-Q22):

### NEW QUESTION # 17

An Architect needs to design a deployment process without downtime for end users. The system architecture contains an AEM author, two AEM publishers, two publish Dispatchers, and a centrally managed load balancer. The publishers serve some content that cannot be cached.

Which two actions should the Architect take to meet these requirements? (Choose two.)

- A. Deploy software packages by replicating them from author to publishers
- B. Connect each publish Dispatcher to one AEM publish
- C. Use each publish Dispatcher to load-balance to both AEM publishers
- D. Configure the centrally managed load balancer to connect directly to the AEM publisher that is not being dedKyed to
- E. Deploy software package to AEM Publishers one by one

**Answer: A,D**

#### **NEW QUESTION # 18**

During an optimization session, a client using AEM 6.5 mentions that they face challenges with their AEM Author setup. The client has significant repository growth and can see an increased amount of TAR files in the segmentstore on disk. When editors are working, they see that workflows take up more time. The purging of workflows works as expected. Which two optimizations should an Architect suggest to take into and further investigate? (Choose two.)

- A. Leverage Transient Workflows where possible
- B. Increase the maxFileSize of the TAR segmentstore
- C. Leverage workflow offloading for all workflows
- D. Execute an offline tar compaction twice a day
- E. Configure the Maximum Parallel Jobs

**Answer: A,C**

Explanation:

Leverage workflow offloading for all workflows and Leverage Transient Workflows where possible<sup>123</sup>

. According to Adobe Experience Manager documentation<sup>2</sup>, workflow offloading is a technique that distributes processing tasks among AEM instances in a topology. This can improve performance and scalability of AEM author instances by using dedicated instances for executing workflows. Transient workflows are workflows that do not persist any data or history and are automatically purged after completion

3. This can reduce repository growth and improve workflow efficiency.

#### **NEW QUESTION # 19**

Refer to the exhibit.

A customer has SSO on its AEM Author environment using Adobe IMS, which is integrated with the customer's IDP using SAML. The customer plans to roll out a new secured website on AEM where SSO authentication is required for end users. The end user accounts are also managed in the customer's existing IDP.

How should the Architect set up the authentication for the website?

- A. Integrate AEM Publisher using SAML directly with the IDP
- B. Integrate AEM Publisher using OAuth with Adobe IMS
- C. Integrate AEM Publisher using SAML with Adobe IMS
- D. Set up CUG and use User Synchronisation from Author to Publisher

**Answer: A**

Explanation:

SAML is a common and standard SSO handler that allows a user to access multiple systems after providing authentication credentials once. AEM ships with a SAML 2.0 Authentication Handler that supports signing and encryption of messages, automatic creation of users, and syncing groups to existing ones in AEM<sup>3</sup>. By integrating AEM Publisher using SAML directly with the IDP, the Architect can leverage the existing user accounts and authentication mechanism for the end users of the secured website.

#### **NEW QUESTION # 20**

An Architect needs to design a deployment process without downtime for end users. The system architecture contains an AEM author, two AEM publishers, two publish Dispatchers, and a centrally managed load balancer. The publishers serve some content that cannot be cached.

Which two actions should the Architect take to meet these requirements? (Choose two.)

- A. Configure the centrally managed load balancer to connect directly to the AEM publisher that is not being deployed to
- B. Connect each publish Dispatcher to one AEM publish
- C. Use each publish Dispatcher to load-balance to both AEM publishers
- D. Deploy software packages by replicating them from author to publishers
- E. Deploy software package to AEM Publishers one by one

**Answer: C,E**

### Explanation:

"using each publish Dispatcher to load-balance to both AEM publishers can provide high availability and fault tolerance. Deploying software packages to AEM Publishers one by one can avoid downtime for end users".

## NEW QUESTION # 21

A client has a site that serves both authenticated and anonymous users. A subsection of the site, which is applicable for only logged-in users, is resource intensive. In order to have a scalable yet secured solution, using available features what would an architect choose for concerned hierarchy?

- A. Cache the concerned hierarchy at CDN but not on Dispatcher
- B. Cache the concerned hierarchy at CDN as well as Dispatcher level
- C. Cache the concerned hierarchy neither at CDN nor at Dispatcher
- D. Cache the concerned hierarchy at Dispatcher but not CDN

Answer: D
