

Exam 1Z0-931-26 Pattern - 1Z0-931-26 Latest Exam Guide

Getting more certifications are surely good things for every ambitious young man. It not only improves the possibility of your life but also keep you constant learning. Test ability is important for personal. But if you are blocked by this exam, our Oracle 1Z0-931-26 Valid Exam Practice questions may help you. If you have only one exam unqualified so that you can't get the certification. Our 1Z0-931-26 valid exam practice questions will help you out. We guarantee you 100% pass in a short time.

Oracle 1Z0-931-26 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Designing Unified Data Management and AI Analytics Solutions		- Use data sharing and integration features - Apply analytics and AI-driven data solutions - Implement JSON, graph, spatial, and text data capabilities
Topic 2: Implementing Autonomous Database Dedicated Deployments	20%	- Configure Autonomous Database Dedicated Infrastructure - Manage dedicated deployment resources - Apply security and isolation features
Topic 3: Managing, Monitoring, and Optimizing Autonomous Database Performance	20%	- Optimize workloads and database performance - Manage backup, recovery, and availability features - Monitor database performance and resource usage
Topic 4: Applying Autonomous Database Serverless Architectures		- Configure Autonomous Database Serverless environments - Implement connectivity and access methods - Manage compute resources and auto scaling - Describe Autonomous Database architecture and key features
Topic 5: Implementing Autonomous Database Fundamentals		- Understand Autonomous Database automation capabilities - Provision and configure Autonomous Database services
Topic 6: Migration and Data Integration Strategies		- Use data integration and migration tools - Plan and execute database migration strategies
Topic 7: Using Autonomous Database Tools		- Use Oracle Database tools and management interfaces - Use Oracle APEX and Oracle Machine Learning with Autonomous Database

Topic 8: Implementing Model Context Protocol (MCP) Server Integration

- Integrate AI applications with Autonomous Database services
- Understand MCP Server integration concepts
- Use natural language queries with generative AI capabilities
- Configure and use Select AI features

Topic 9: Applying Select AI Capabilities

1Z0-931-26 Latest Exam Guide | 1Z0-931-26 Valid Exam Objectives

The certification of Oracle 1Z0-931-26 exam is what IT people want to get. Because it relates to their future fate. Oracle 1Z0-931-26 exam training materials are the learning materials that each candidate must have. With this materials, the candidates will have the confidence to take the exam. Training materials in the Lead2Passed are the best training materials for the candidates. With Lead2Passed's Oracle 1Z0-931-26 Exam Training materials, you will pass the exam easily.

Oracle Autonomous AI Database Professional Sample Questions (Q32-Q37):

NEW QUESTION # 32

You want to enable automatic indexing in a database, but any new auto indexes should be created as invisible indexes, so that they cannot be used in SQL statements. Which command will you use?

- A. EXEC DBMS_AUTO_INDEX.CONFIGURE('AUTO_INDEX_MODE','INVISIBLE');
- B. EXEC DBMS_AUTO_INDEX.CONFIGURE('AUTO_INDEX_MODE','REPORT ONLY');
- C. EXEC DBMS_AUTO_INDEX.CONFIGURE('AUTO_INDEX_MODE','OFF');
- D. EXEC DBMS_AUTO_INDEX.CONFIGURE('AUTO_INDEX_MODE','IMPLEMENT');

Answer: B

Explanation:

Oracle's automatic indexing feature, available in Autonomous Database, optimizes query performance by creating and managing indexes. The requirement here is to enable it but ensure new indexes are invisible (not used by the optimizer unless explicitly made visible). The correct command is:

EXEC DBMS_AUTO_INDEX.CONFIGURE('AUTO_INDEX_MODE','REPORT ONLY'); (C):

The REPORT ONLY mode enables automatic indexing, where the database identifies and creates candidate indexes based on workload analysis. However, these indexes are created as invisible by default, meaning the optimizer does not use them in SQL execution plans unless a DBA manually makes them visible (e.g., via ALTER INDEX ... VISIBLE). This mode is ideal for testing or validation without impacting production queries. For example, if a query frequently filters on a column, an invisible index might be created, but it won't affect performance until explicitly activated.

The incorrect options are:

EXEC DBMS_AUTO_INDEX.CONFIGURE('AUTO_INDEX_MODE','IMPLEMENT'); (A): The IMPLEMENT mode fully enables automatic indexing, creating and maintaining visible indexes that the optimizer uses immediately.

This contradicts the requirement for invisible indexes.

EXEC DBMS_AUTO_INDEX.CONFIGURE('AUTO_INDEX_MODE','OFF'); (B): The OFF mode disables automatic indexing entirely, so no indexes (visible or invisible) are created, failing the requirement to enable it.

EXEC DBMS_AUTO_INDEX.CONFIGURE('AUTO_INDEX_MODE','INVISIBLE'); (D): There is no INVISIBLE mode in DBMS_AUTO_INDEX.CONFIGURE. While indexes can be set as invisible individually, this is not a valid configuration option for the auto-indexing feature.

The REPORT ONLY mode provides a controlled approach, allowing index creation for analysis without immediate deployment.

This is particularly useful in Autonomous Database, where automation is balanced with DBA oversight.

NEW QUESTION # 33

Where are the customer-managed encryption keys stored for Autonomous Database on Dedicated Infrastructure?

- A. On the Exadata infrastructure where the Autonomous Database Dedicated is hosted
- B. Inside the backup of the container database
- C. In a separate key vault external to the Exadata infrastructure

- D. Inside the Autonomous Database wallet

Answer: C

Explanation:

Customer-managed encryption keys enhance security control:

Correct Answer (A): In a separate key vault external to the Exadata infrastructure; refers to OCI Vault (Key Management Service), where keys are securely stored and managed outside the database infrastructure.

Incorrect Options:

B: The wallet secures connections, not encryption keys.

C: Storing keys on Exadata compromises separation of duties.

D: Backups don't store keys; they're encrypted by keys from the vault.

This separation ensures robust key management.

NEW QUESTION # 34

Which can be used to ensure that your Autonomous Database is accessible only from a given set of IPs?

- A. IPSec List
- B. IP Vault
- **C. Access Control List**
- D. Security List

Answer: C

Explanation:

Restricting access to an Autonomous Database to specific IPs involves network security controls. The correct answer is:

Access Control List (C): In Autonomous Database, an Access Control List (ACL) defines which IP addresses or CIDR blocks

(e.g., 192.168.1.0/24) can connect to the database. You configure this via the OCI console under the ADB's

Access Control List settings, adding rules like Allow TCP from 10.0.0.0/16 on port

1522. This applies to public endpoints (shared infrastructure) or private endpoints with additional network rules, ensuring only authorized IPs can initiate connections. For example, a company might restrict access to its office VPN range, blocking all other traffic. ACLs work at the database level, complementing VCN security.

The incorrect options are:

Security List (A): Security Lists operate at the VCN subnet level, controlling traffic to all resources in the subnet (e.g., ingress TCP 1522 to an ADB subnet). While useful, they're broader than ADB-specific ACLs, which target the database instance directly, making ACLs the precise answer here.

IP Vault (B): There's no IP Vault in OCI. This might confuse OCI Vault (for secrets), but it doesn't manage IP access.

IPSec List (D): IPSec secures traffic via VPNs, not IP allowlisting for database access. It's unrelated to ADB connectivity restrictions.

ACLs provide a database-specific, user-friendly way to enforce IP-based access control.

NEW QUESTION # 35

Which Database Actions tool is used to get information about the entities in your Oracle Autonomous Database and to also see how changing an object affects other objects?

- A. Data Insight
- **B. Catalog**
- C. JSON
- D. Data Load

Answer: B

Explanation:

Database Actions (formerly SQL Developer Web) offers tools for database management:

Correct Answer (A): The Catalog tool provides a detailed view of database entities (tables, views, schemas) and their metadata, including dependencies via the Impact tab. It helps assess how changes (e.g., dropping a table) affect related objects.

Incorrect Options:

B: Data Load is for importing data, not analyzing entities or dependencies.
 C: JSON is a data format, not a tool; it's supported but irrelevant here.
 D: Data Insight is a separate analytics service, not part of Database Actions.
 Catalog is essential for metadata exploration and impact analysis.

NEW QUESTION # 36

Which native data type is used to store spatial information?

- **A. SDO_GEOMETRY**
- B. SDO_RELATE
- C. GEO_JSON
- D. SDO_LOCATION

Answer: A

Explanation:

Oracle Database supports spatial data with a dedicated data type:

Correct Answer (A): SDO_GEOMETRY is the native data type for storing spatial information, such as points, lines, and polygons, in a structured format compatible with spatial queries and operations.

Incorrect Options:

B: SDO_LOCATION is not a valid data type; it may be a confusion with SDO_GEOMETRY.

C: SDO_RELATE is a spatial operator for relationship analysis, not a storage type.

D: GEO_JSON is a format for spatial data, not a native Oracle data type (though it can be parsed into SDO_GEOMETRY).

This type enables advanced geospatial functionality.

NEW QUESTION # 37

.....

The goal of a Oracle 1Z0-931-26 mock exam is to test exam readiness. Lead2Passed's online Oracle Autonomous AI Database Professional 1Z0-931-26 practice test can be accessed online through all major browsers such as Chrome, Firefox, Safari, and Edge. You can also download and install the offline version of Oracle Autonomous AI Database Professional 1Z0-931-26 Practice Exam software on Windows-based PCs only. You can prepare for the Oracle Autonomous AI Database Professional exam without an internet connection using the offline version of the mock exam.
