## WGU Digital Forensics in Cybersecurity (D431/C840) Course Exam Sample Questions (Q67-Q72):

### NEW QUESTION # 67

A digital forensic examiner receives a computer used in a hacking case. The examiner is asked to extract information from the computer's Registry.

How should the examiner proceed when obtaining the requested digital evidence?

- A. Enlist a colleague to witness the investigative process
- B. Ensure that any tools and techniques used are widely accepted
- C. Download a tool from a hacking website to extract the data
- D. Investigate whether the computer was properly seized

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In digital forensics, the use of reliable, validated, and widely accepted tools and techniques is critical to maintain the integrity and admissibility of digital evidence. According to the National Institute of Standards and Technology (NIST) guidelines and the Scientific Working Group on Digital Evidence (SWGDE) standards, any forensic process must utilize methods that are recognized by the forensic community and have undergone rigorous testing to ensure accuracy and reliability.

\* Using validated tools helps prevent evidence contamination or loss and ensures that results can withstand legal scrutiny.

\* While proper seizure and witnessing are important, the priority in the extraction phase is to use appropriate, trusted tools.

\* Downloading tools from unauthorized or suspicious sources can compromise the evidence and is not an ethical or legal practice.

Reference: NIST SP 800-101 (Guidelines on Mobile Device Forensics) and SWGDE Best Practices emphasize tool validation and adherence to community-accepted methods as foundational principles in forensic examination.

### NEW QUESTION # 68

- A. System
- B. Application
- C. Security
- D. ForwardedEvents

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

TheForwardedEventslog in Windows 7 is specifically designed to store events collected from remote computers via event forwarding. This log is part of the Windows Event Forwarding feature used in enterprise environments to centralize event monitoring.

\* TheSystemandApplicationlogs store local system and application events.

\* TheSecuritylog stores local security-related events.

\* ForwardedEventscollects and stores events forwarded from other machines.

Microsoft documentation and NIST SP 800-86 mention the use of ForwardedEvents for centralized event log collection in investigations.

### NEW QUESTION # 69

The human resources manager of a small accounting firm believes he may have been a victim of a phishing scam. The manager clicked on a link in an email message that asked him to verify the logon credentials for the firm's online bank account.

- A. System logs
- **B. Browser cache**
- C. Email headers
- D. Network traffic logs

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The browser cache stores recently accessed web pages, images, and cookies, which may include phishing site content and related activity. Investigators analyzing phishing attacks collect browser cache data to reconstruct the victim's web activity and detect malicious sites.

\* Cached web pages help corroborate victim statements and establish timelines.

\* Browser history and cache are volatile and must be preserved promptly.

Reference:According to NIST SP 800-101 and forensic guides, browser cache is critical in investigating phishing and web-based attacks.

### NEW QUESTION # 70

It was developed by the Sleuth Kit community and is supported by forensic tools such as Sleuth Kit and Autopsy. AFF allows efficient storage, compression, and metadata annotation, which makes it suitable for forensic investigations.

\* AccessData is known for FTK format, not AFF.

\* iLook uses proprietary formats unrelated to AFF.

\* Guidance Software developed the EnCase Evidence File (E01) format.

\* AFF is widely recognized in open-source forensic toolchains.

Reference:The AFF format and its use with Sleuth Kit and Autopsy are documented in digital forensics literature and the AFF official documentation, as endorsed by the NIST and forensic tool developer communities.
