A hospital's patient safety team is exploring strategies to reduce the number of patient identification errors in the lab specimen collection process. Which of the following strategies will provide the highest impact in reduction of errors?

A. Revise the process to allow only one specimen label on the nurse/phlebotomist tray at a time.

B. Educate all nurses and phlebotomists to ask about patient identifiers before obtaining specimen.

C. Utilize barcode scanners to generate a specimen label at the bedside.

D. Standardize the process to require the nurse/phlebotomist to ask the patient to state their name prior to the specimen collection. - ✓✓✓

Correct Answer > C. Utilize barcode scanners to generate a specimen label at the bedside.

Utilizing bar code scanners is the correct answer because it entails a forcing function at the bedside. After scanning the armband, the correct label for that patient will print from the scanner.

Many students often start to study as the exam is approaching. Time is very valuable to these students, and for them, one extra hour of study may mean 3 points more on the test score. If you are one of these students, then Palo Alto Networks Certified Cybersecurity Practitioner exam tests are your best choice. Because students often purchase materials from the Internet, there is a problem that they need transport time, especially for those students who live in remote areas. When the materials arrive, they may just have a little time to read them before the exam. However, with PCCP Exam Questions, you will never encounter such problems, because our materials are distributed to customers through emails.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xparse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.

Topic 2	<ul style="list-style-type: none"> Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
Topic 3	<ul style="list-style-type: none"> Cybersecurity: This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.
Topic 4	<ul style="list-style-type: none"> Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.
Topic 5	<ul style="list-style-type: none"> Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.

Exam Palo Alto Networks PCCP Cram Questions & Exam Dumps PCCP Collection

It is known to us that the PCCP exam braindumps have dominated the leading position in the global market with the decades of painstaking efforts of our experts and professors. There are many special functions about study materials to help a lot of people to reduce the heavy burdens when they are preparing for the exams. For example, the PCCP study practice question from our company can help all customers to make full use of their sporadic time. Just like the old saying goes, time is our product by a good at using sporadic time person, will make achievements. If you can learn to make full use of your sporadic time to preparing for your PCCP Exam, you will find that it will be very easy for you to achieve your goal on the exam. Using our study materials, your sporadic time will not be wasted, on the contrary, you will spend your all sporadic time on preparing for your PCCP exam.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q77-Q82):

NEW QUESTION # 77

Match the Identity and Access Management (IAM) security control with the appropriate definition.

IAM security		Ensuring least-privileged access to cloud resources and infrastructure
Machine Identity		Discovering threats by identifying activity that deviates from a normal baseline
User Entity Behavior Analytics		Securing and managing the relationships between users and cloud resources
Access Management		Decoupling workload identity from IP addresses

Answer:

Explanation:

IAM security	IAM security	Ensuring least-privileged access to cloud resources and infrastructure
Machine Identity	User Entity Behavior Analytics	Discovering threats by identifying activity that deviates from a normal baseline
User Entity Behavior Analytics	Access Management	Securing and managing the relationships between users and cloud resources
Access Management	Machine Identity	Decoupling workload identity from IP addresses

NEW QUESTION # 78

Which component of cloud security is used to identify misconfigurations during the development process?

- A. Code security
- B. Container security
- C. SaaS security
- D. Network security

Answer: A

Explanation:

Code security focuses on identifying vulnerabilities and misconfigurations early in the development process.

It uses tools like static code analysis and infrastructure-as-code (IaC) scanning to ensure secure coding and configuration before deployment.

NEW QUESTION # 79

Identify a weakness of a perimeter-based network security strategy to protect an organization's endpoint systems.

- A. It cannot monitor all potential network ports
- B. It cannot identify command-and-control traffic
- C. It assumes that all internal devices are untrusted
- D. It assumes that every internal endpoint can be trusted

Answer: D

Explanation:

A perimeter-based network security strategy relies on firewalls, routers, and other devices to create a boundary between the internal network and the external network. This strategy assumes that every internal endpoint can be trusted, and that any threat comes from outside the network. However, this assumption is flawed, as internal endpoints can also be compromised by malware, phishing, insider attacks, or other methods. Once an attacker gains access to an internal endpoint, they can use it to move laterally within the network, bypassing the perimeter defenses. Therefore, a perimeter-based network security strategy is not sufficient to protect an organization's endpoint systems, and a more comprehensive approach, such as Zero Trust, is needed. References:

NEW QUESTION # 80

A doctor receives an email about her upcoming holiday in France. When she clicks the URL website link in the email, the connection is blocked by her office firewall because it's a known malware website. Which type of attack includes a link to a malware website in an email?

- A. spam
- B. whaling
- C. pharming
- D. phishing

Answer: D

Explanation:

Phishing is a type of attack that involves sending fraudulent emails that appear to be from legitimate sources, such as banks, companies, or individuals, in order to trick recipients into clicking on malicious links, opening malicious attachments, or providing sensitive information¹². The link to a malware website in the email is an example of a malicious link, which may lead to the installation of malware, ransomware, spyware, or other malicious software on the user's device, or the redirection to a fake website that mimics a legitimate one, where the user may be asked to enter their credentials, personal information, or financial details³⁴. Phishing emails often use social engineering techniques, such as creating a sense of urgency, curiosity, or fear, to persuade the user to click on the link or attachment, or to reply to the email⁵. Phishing emails may also spoof the sender's address, domain, or logo, to make them look more authentic and trustworthy⁶.

Whaling, pharming, and spam are not the correct answers for this question. Whaling is a specific type of phishing that targets high-profile individuals, such as executives, celebrities, or politicians, with the aim of stealing their confidential information or influencing their decisions⁷. Pharming is a type of attack that involves redirecting the user's web browser to a fake website, even if they enter the correct URL, by modifying the DNS server or the user's hosts file. Spam is the unsolicited or unwanted electronic messages, such as emails, texts, or instant messages, that are sent in bulk to a large number of recipients, usually for advertising, marketing, or scamming purposes. NEW QUESTION # 81

What type of attack redirects the traffic of a legitimate website to a fake website?

- A. Whaling
- B. Watering hole
- C. Pharming
- D. Spear phishing

Answer: C

Explanation:

Pharming is an attack that redirects traffic from a legitimate website to a malicious fake website, typically by corrupting the DNS

system or modifying host files, with the intent of stealing user credentials or sensitive data.

NEW QUESTION # 82

.....

We know that the standard for most workers become higher and higher; so we also set higher goal on our PCCP guide questions. Our training materials put customers' interests in front of other points, committing us to the advanced PCCP learning materials all along. Until now, we have simplified the most complicated PCCP Guide questions and designed a straightforward operation system, with the natural and seamless user interfaces of PCCP exam question grown to be more fluent, we assure that our practice materials provide you a total ease of use.
