Our company have the higher class operation system than other companies, so we can assure you that you can start to prepare for the JS-Dev-101 exam with our study materials in the shortest time. In addition, if you decide to buy JS-Dev-101 exam materials from our company, we can make sure that your benefits will far exceed the costs of you. The rate of return will be very obvious for you. We sincerely reassure all people on the JS-Dev-101 Test Question from our company and enjoy the benefits that our study materials bring. We believe that our study materials will have the ability to help all people pass their JS-Dev-101 exam and get the related exam in the near future.

Salesforce Certified JavaScript Developer - Multiple Choice Sample Questions (Q74-Q79):

NEW QUESTION # 74

A developer is setting up a Node.js server and is creating a script at the root of the source code, index.js, that will start the server when executed. The developer declares a variable that needs the folder location that the code executes from. Which global variable can be used in the script?

- A. this.path
- B. **_filename**
- C. window.location
- D. _dirname

Answer: B

NEW QUESTION # 75

Universal Containers recently launched its new landing page to host a crowd-funding campaign. The page uses an external library to display some third-party ads. Once the page is fully loaded, it creates more than 50 new HTML items placed randomly inside the DOM, like the one in the code below:

All the elements includes the same ad-library-item class, They are hidden by default, and they are randomly displayed while the user navigates through the page.

- A. Use the browser console to execute a script that prevents the load event to be fired.
- B. Use the DOM inspector to prevent the load event to be fired.
- C. **Use the browser to execute a script that removes all the element containing the class ad-library-item**
- D. Use the DOM inspector to remove all the elements containing the class ad-library-item.

Answer: C

NEW QUESTION # 76

A developer wants to create an object from a function in the browser using the code below.

What happens due to the lack of the mm keyword on line 02?

- A. **window.name is assigned to 'hello' and the variable = remains undefined.**
- B. window.m is assigned the correct object.
- C. The m variable is assigned the correct object but this.name remains undefined.
- D. The m variable is assigned the correct object.

Answer: A

NEW QUESTION # 77

Considering type coercion, what does the following expression evaluate to?

true + '13' + NaN

- A. 'true13NaN'
- B. 0
- C. 'true13'
- D. '113NaN'

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract JavaScript Knowledge:

Expression:

true + '13' + NaN

The + operator is left-associative, so evaluation order:

true + '13'

When one operand is a string, + performs string concatenation.

true is converted to string 'true'.

'true' + '13' → 'true13'.

Result from step 1 with NaN:

'true13' + NaN

Again, one operand is a string, so concatenation.

NaN is converted to string 'NaN'.

'true13' + 'NaN' → 'true13NaN'.

Final value: 'true13NaN'.

So A is correct.

Why others are wrong:

B: '113NaN' would require true to coerce to 1 first and no string to be present, which is not the case because '13' forces string concatenation.

C: 14 would require pure numeric addition, which is not the case once a string is involved.

D: 'true13' ignores the final + NaN part.

Concepts: type coercion with +, boolean to string, NaN to string, left-associative evaluation.

NEW QUESTION # 78

A developer is leading the creation of a new web server for their team that will fulfill API requests from an existing client. The team wants a web server that runs on Node.js, and they want to use the new web framework Minimalist.js. The lead developer wants to advocate for a more seasoned back-end framework that already has a community around it.

Which two frameworks could the lead developer advocate for?

- A. Next
- B. Next.js
- C. Gatsby
- D. Angular

Answer: A,B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract JavaScript Knowledge:

The question is about:

Web frameworks that run on Node.js

Used to build servers and APIs

With established communities.

From the given options:

Angular:

A front-end framework running in the browser, not a Node.js server framework.

Gatsby:

A React-based static site generator; uses Node tooling but is not primarily a Node server framework.

Next / Next.js:

Server-side rendering / full-stack frameworks built on Node.js and React.

Used to create both server-rendered pages and APIs.

They have active communities and are "seasoned" compared to a hypothetical Minimalist.js.

Although typical Node back-end frameworks would include Express.js, Koa, or NestJS, given the options provided, the best fits for server-side frameworks with Node.js and an ecosystem are:

Next (interpreted as Next.js)

Next.js

Thus, the correct pair from the list is B and D.

Concepts: Node.js web frameworks, server-side rendering, community-backed frameworks vs minimal/new frameworks.

NEW QUESTION # 79

.....

The Lead2Passed Salesforce JS-Dev-101 exam questions is 100% verified and tested. Lead2Passed Salesforce JS-Dev-101 exam practice questions and answers is the practice test software. In Lead2Passed, you will find the best exam preparation material. The material including practice questions and answers. The information we have could give you the opportunity to practice issues, and ultimately achieve your goal that through Salesforce JS-Dev-101 Exam Certification.
