問題 #139

Which two aspects of the cloud PaaS model are managed by the customer but not the provider? (Choose two)

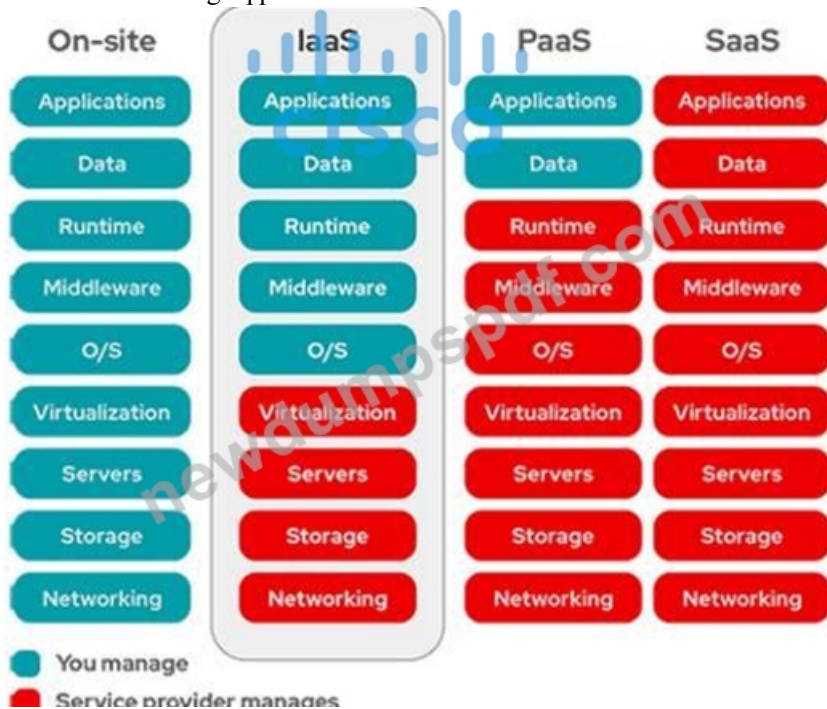

- A. virtualization
- B. operating systems
- C. applications
- D. data
- E. middleware

答案：C,D

解題說明：

Explanation:

Customers must manage applications and data in PaaS.

問題 #140

Which two features are used to configure Cisco ESA with a multilayer approach to fight viruses and malware?
(Choose two)

- A. DLP
- B. outbreak filters
- C. RAT
- D. white list
- E. Sophos engine

答案: B,E

解題說明:

Cisco ESA uses a multilayer approach to fight viruses and malware. The first layer of defense consists of outbreak filters, which the appliance downloads from Cisco SenderBase. Outbreak filters use global threat intelligence and behavioral analysis to identify and block emerging threats before they reach the network. The second layer of defense consists of antivirus engines, which scan the message body and attachments for known viruses and malware. Cisco ESA supports multiple antivirus engines, such as Sophos, McAfee, and Cisco AMP. The Sophos engine is one of the default engines that Cisco ESA uses, along with McAfee. The Sophos engine provides fast and accurate detection of viruses and malware, and updates its signatures frequently. The other options are not features that are used to configure Cisco ESA with a multilayer approach to fight viruses and malware. A white list is a list of trusted senders or recipients that are exempt from spam or virus filtering.

RAT is the Recipient Access Table, which is used to determine whether the appliance accepts or rejects messages to a recipient address. DLP is Data Loss Prevention, which is used to prevent sensitive or confidential data from leaving the network. References

問題 #141

An organization plans to upgrade its current email security solutions, and an engineer must deploy Cisco Secure Email. The requirements for the upgrade are:

- * Implement Data Loss Prevention
- * Implement mail encryption

* Integrate with an existing Cisco IronPort Secure Email Gateway solution Which Cisco Secure Email license is needed to accomplish this task?

- A. Cisco Secure Email Outbound Essentials
- B. Cisco Secure Email Phishing Defense
- C. Cisco Secure Email Domain Protection
- D. Cisco Secure Email Inbound Essentials

答案： A

問題 #142

What is the purpose of the certificate signing request when adding a new certificate for a server?

- A. It provides the server information so a certificate can be created and signed
- B. It is the password for the certificate that is needed to install it with.
- C. It is the certificate that will be loaded onto the server
- D. It provides the certificate client information so the server can authenticate against it when installing

答案： A

解題說明：

Explanation

Explanation

A certificate signing request (CSR) is one of the first steps towards getting your own SSL Certificate. Generated on the same server you plan to install the certificate on, the CSR contains information (e.g. common name, organization, country) that the Certificate Authority (CA) will use to create your certificate. It also contains the public key that will be included in your certificate and is signed with the corresponding private key

問題 #143

An engineer is configuring cloud logging using a company-managed Amazon S3 bucket for Cisco Umbrella logs. What benefit does this configuration provide for accessing log data?

- A. It is included in the license cost for the multi-org console of Cisco Umbrella
- B. Data can be stored offline for 30 days.
- C. No other applications except Cisco Umbrella can write to the S3 bucket
- D. It can grant third-party SIEM integrations write access to the S3 bucket

答案： B
