

# SC-300 Valid Exam Questions, SC-300 Reliable Test Cost

**Latest Version: 11.0**

## Question: 1

You need to meet the authentication requirements for leaked credentials. What should you do?

- A. Enable federation with PingFederate in Azure AD Connect.
- B. Configure Azure AD Password Protection.
- C. Enable password hash synchronization in Azure AD Connect.
- D. Configure an authentication method policy in Azure AD.

**Answer: C**

Reference:

<https://docs.microsoft.com/en-us/azure/security/fundamentals/steps-secure-identity>

## Question: 2

You need to configure the MFA settings for users who connect from the Boston office. The solution must meet the authentication requirements and the access requirements. What should you configure?

- A. named locations that have a private IP address range
- B. named locations that have a public IP address range
- C. trusted IPs that have a public IP address range
- D. trusted IPs that have a private IP address range

**Answer: C**

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition>  
Location offer your country set, IP ranges MFA trusted IP and corporate network VPN gateway IP address: This is the public IP address of the VPN device for your on-premises network. The VPN device requires an IPv4 public IP address. Specify a valid public IP address for the VPN device to which you want to connect. It must be reachable by Azure Client Address space: List the IP address ranges that you want routed to the local on-premises network through this gateway. You can add multiple address space ranges. Make sure that the ranges you specify here do not overlap with ranges of other networks your virtual network connects to, or with the address ranges of the virtual network itself.

## Question: 3

BONUS!!! Download part of TestPDF SC-300 dumps for free: [https://drive.google.com/open?id=1auLmjVTwsJxhTTTIAi0A\\_qHLcTXInzu](https://drive.google.com/open?id=1auLmjVTwsJxhTTTIAi0A_qHLcTXInzu)

Candidates who don't find actual SC-300 Questions remain unsuccessful in the Microsoft Identity and Access Administrator (SC-300) test and lose their resources. That's why TestPDF is offering real Microsoft SC-300 Questions that are real and can save you from wasting time and money. Hundreds of applicants have studied successfully from our SC-300 latest questions in one go.

Microsoft SC-300 exam is ideal for IT professionals who have experience in implementing and managing identity and access solutions in Microsoft Azure. SC-300 exam covers a range of topics, including access management, identity management, authentication, and authorization. Candidates will be tested on their knowledge of these topics and their ability to implement identity and access solutions using Microsoft Azure.

Microsoft SC-300 exam, also known as the Microsoft Identity and Access Administrator exam, is designed to test the skills and knowledge of professionals who are responsible for managing and securing identities and access in a Microsoft environment. Microsoft Identity and Access Administrator certification exam is intended for individuals who have experience with Microsoft 365, Azure AD, and other Microsoft technologies.

Microsoft SC-300 Exam is ideal for IT professionals who work with identity and access solutions in Microsoft 365 and Azure environments. Microsoft Identity and Access Administrator certification is a great way to demonstrate your expertise in these areas, and it can help you advance your career. SC-300 exam is also an excellent opportunity to gain knowledge and skills that are in high demand in the IT industry. As the demand for cloud-based identity and access management solutions continues to grow, the Microsoft SC-300 certification can give you a competitive edge in the job market.

## SC-300 Reliable Test Cost, Pass Leader SC-300 Dumps

Exam SC-300 is just a piece of cake if you have prepared for the exam with the helpful of TestPDF's exceptional study material. If you are a novice, begin from SC-300 study guide and revise your learning with the help of testing engine. Exam SC-300 Brain Dumps is another superb offer of TestPDF that is particularly helpful for those who want to the point and the most relevant content to pass exam. With all these products, your success is assured with 100% money back guarantee.

### Microsoft Identity and Access Administrator Sample Questions (Q192-Q197):

#### NEW QUESTION # 192

You have an Azure AD tenant that contains two users named User1 and User2. You plan to perform the following actions:

- \* Create a group named Group1.
- \* Add User1 and User2 to Group1.
- \* Assign Azure AD roles to Group1.

You need to create Group1.

Which two settings can you use? Each correct answer presents a complete solution NOTE: Each correct selection is worth one point

- A. Group type: Microsoft 365 Membership type: Dynamic User
- B. Group type: Security Membership type: Dynamic User
- C. Group type: Microsoft 365 Membership type: Assigned
- D. Group type: Security Membership type: Dynamic Device
- E. Group type: Security Membership type: Assigned

**Answer: E**

Explanation:

In Azure AD, assigning directory roles to a group requires creating a role-assignable group. The SC-300 study materials and the official exam reference emphasize that the group must be a Security group and created with the `isAssignableToRole` capability. Microsoft's guidance states: "Only security groups can be assigned Azure AD roles. Microsoft 365 groups are not supported." It also clarifies membership constraints: "Dynamic membership is not supported for role-assignable groups." Because you intend to assign Azure AD roles to Group1 and also add User1 and User2 directly, the acceptable configuration is a Security group with Assigned membership. This allows you to explicitly add the two users and later attach an Azure AD role to the group via PIM or standard role assignment. Options using Microsoft 365 groups (A, E) are invalid for role assignment, and options using Dynamic membership (A, B, C) are not permitted for role-assignable groups.

Therefore, the only configuration that satisfies both adding the users and assigning Azure AD roles is Security + Assigned (Option D).

#### NEW QUESTION # 193

Your network contains an on-premises Active Directory domain that syncs to an Azure Active Directory (Azure AD) tenant. The tenant contains the users shown in the following table.

| Name  | Type  | Directory synced |
|-------|-------|------------------|
| User1 | User  | No               |
| User2 | User  | Yes              |
| User3 | Guest | No               |

All the users work remotely.

Azure AD Connect is configured in Azure AD as shown in the following exhibit.

## PROVISION FROM ACTIVE DIRECTORY

 **Azure AD Connect cloud provisioning**

This feature allows you to manage provisioning from the cloud.

[Manage provisioning \(Preview\)](#)

**Azure AD Connect sync**

|                    |                      |
|--------------------|----------------------|
| Sync Status        | Enabled              |
| Last Sync          | Less than 1 hour ago |
| Password Hash Sync | Enabled              |

## USER SIGN IN

|                             |          |           |
|-----------------------------|----------|-----------|
| Federation                  | Disabled | 0 domains |
| Seamless single sign-on     | Disabled | 0 domains |
| Pass-through authentication | Enabled  | 2 agents  |

Connectivity from the on-premises domain to the internet is lost.  
Which users can sign in to Azure AD?

- A. User1 only
- B. User1 and User2 only
- **C. User1 and User3 only**
- D. User1, User2, and User3

**Answer: C**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-pta-current-limitations>

### NEW QUESTION # 194

You have a Microsoft Entra tenant that contains the identities shown in the following table.

| Name     | Type             | Member of |
|----------|------------------|-----------|
| User1    | User             | Group1    |
| Managed2 | Managed Identity | Group1    |
| User3    | User             | Group2    |
| User4    | User             | None      |

Group1 has the following configurations:

\* Owners: User1, User4

\* Members: User1, Managed2, Group2

You create an access review that has the following settings:

\* Name: Review1

\* Review scope: Select Teams + Groups

\* Group: Group1

\* Scope: All users

\* Select reviewers: Group owner(s)

The Fallback reviewers: setting is NOT configured.

**Answer Area**

Statements

User1 can perform an access review for User1.

Yes

☐

No

☐

User1 can perform an access review for Managed2.

☐
☐

User1 can perform an access review for User3.

☐
☐

**Answer:**

Explanation:

Answer Area

| Statements                                       | Yes                              | No                               |
|--|----------------------------------|----------------------------------|
| User1 can perform an access review for User1.    | <input checked="" type="radio"/> | <input type="radio"/>            |
| User1 can perform an access review for Managed2. | <input checked="" type="radio"/> | <input type="radio"/>            |
| User1 can perform an access review for User3.    | <input type="radio"/>            | <input checked="" type="radio"/> |

### NEW QUESTION # 195

You have an Azure Ad tenant that contains the users show in the following table.

| Name  | Usage location | Department | Job title |
|-------|----------------|------------|-----------|
| User1 | United States  | Sales      | Associate |
| User2 | Finland        | Sales      | SalesRep  |
| User3 | Australia      | Sales      | Manager   |

You create a dynamic user group and configure the following rule syntax.

Which users will be added to the group?

- A. User1 and User2 only
- B. User1 only
- C. User2 only
- D. User1 and User3 only
- E. User3 only
- F. User1, User2, and User3

**Answer: A**

### NEW QUESTION # 196

Your on-premises network contains an Active Directory domain that uses Azure AD Connect to sync with an Azure AD tenant. You need to configure Azure AD Connect to meet the following requirements:

- \* User sign-ins to Azure AD must be authenticated by an Active Directory domain controller.
- \* Active Directory domain users must be able to use Azure AD self-service password reset (SSPR).

What should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Authentication by the domain controller: Federation with Active Directory Federation Services (AD FS)

SSPR: Password hash synchronization

Device writeback

Group writeback

Password hash synchronization

Password writeback

**Answer:**

**Explanation:**

Answer Area

Microsoft

Authentication by the domain controller:

Federation with Active Directory Federation Services (AD FS)

Federation with Active Directory Federation Services (AD FS)

Pass-through authentication

Password hash synchronization

SSPR:

Password hash synchronization

Device writeback

Group writeback

Password hash synchronization

Password writeback

Explanation:

Answer Area

Microsoft

Authentication by the domain controller:

Federation with Active Directory Federation Services (AD FS)

SSPR:

Password hash synchronization

## NEW QUESTION # 197

.....

Heaps of beginners and skilled professionals already have surpassed the Microsoft SC-300 certification exam and pursuing a worthwhile profession inside the quite aggressive market. You may additionally turn out to be a part of this skilled and certified community. To try this you sincerely need to pass the Microsoft SC-300 Certification examination.
