Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q52-Q57):

NEW QUESTION # 52
What are capabilities of Projects in Self-Service?

- A. Monitoring Prism Central hardware alerts
- B. Assigning blueprints and runbooks to clusters
- C. Automating VM migrations across clusters and providers
- D. Grouping users and managing role-based access

Answer: D

NEW QUESTION # 53
What is the prerequisite for reducing the CPU and RAM memory allocation on a VM when using playbooks?

- A. Guest OS must support memory hot remove functionality.
- B. VM must be powered off.
- C. VM must have NGT installed.
- D. Guest OS must support CPU hot remove functionality.

Answer: B

Explanation:
To reduce the CPU and RAM memory allocation on a VM using playbooks, the VM must be powered off.
This is because the operation of reducing CPU and memory allocation cannot be performed on a running VM without causing instability or potential crashes.

NEW QUESTION # 54
An administrator manages two Nutanix clusters: Cluster01 and Cluster02 and has needs to automate similar workload types using these images that are located on Cluster01:
ImageA
ImageB
ImageC
The administrator needs to deploy ImageA and ImageC within the Cluster02 environment.
How this can be achieved?

- A. Configure a Protection Domain to replicate images.
- B. Utilize Prism Central image placement policies.
- C. Clone the images from the Cluster01 to Cluster02.
- D. All images are available to all clusters managed by a single Prism Central.

Answer: B

NEW QUESTION # 55

An administrator needs to restore a snapshot from a VM running in AWS that was created with a single VM blueprint Within. which Calm tab should the administrator perform this task?

- A. Manage
- B. Snapshots
- C. Recovery

Answer: B

Explanation:

According to the Nutanix Calm documentation1, the Snapshots tab allows the administrator to view, create, and restore snapshots of the VMs that are part of a blueprint. The Manage tab only shows the status and actions of the blueprint, and the Recovery tab is used for disaster recovery operations2. Reference:

NEW QUESTION # 56

An administrator needs to enable Showback in Calm to allow departments to see costs associated with their Projects. Where in Calm would the administrator enable Showback?

- A. LCM
- B. Marketplace
- C. Projects
- D. Setting

Answer: D

Explanation:

Showback is a feature in Calm that allows administrators to track and report the costs of running applications and projects on different cloud platforms. Showback can be enabled in the Setting menu of Calm, under the Showback tab. There, the administrator can configure the cost models, cloud accounts, and currency for Showback. Showback can also be accessed from the Dashboard menu, where the administrator can view the cost reports and charts for different applications and projects. Reference:
