- D. Change the Quantity field of the Fulfillment Order Product to 0 from the Fulfillment Order's related list

**Answer: A,D**

**NEW QUESTION # 95**
A user wants to review credit card payment data for a specific Order. Which object should the employee navigate to?

- A. Order
- B. Payment
- C. Payment Method
- D. Order Payment Summary

**Answer: D**

Explanation:
The object that the user should navigate to to review credit card payment data for a specific Order is Order Payment Summary. An Order Payment Summary is a record that represents a payment made for an order or part of an order. An Order Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc. Verified Reference:https://help.salesforce.com/s/articleView?id=sf.order_management_order_payment_summary.htm&type=5

- A. Fulfillment Order
- B. Return Order
- C. Order Summary Adjustment
- D. Payment Order Summary

**Answer: B**

Explanation:

The object record that is created when customer returns a product after fulfillment is Return Order. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc. Verified Reference:https://help.salesforce.com/s/articleView?id=sf.order_management_return_order.htm&type=5

## NEW QUESTION # 97

What three steps are requiredwhen deploying changes via change sets?

- A. Approve the change set in the sandbox org
- B. Deploy the change set in the target org
- C. Create thechange set in the sandbox org
- D. Upload the change set to the target org
- E. Add the change set to the release schedule in the target org

**Answer: B,C,D**

Explanation:
Three steps that are required when deploying changes via change sets are:
Create the change set in the sandbox org. This is the first step where the administrator selects the metadata components that they wantto deploy and adds them to a change set in the source org, which is usually a sandbox org.
Upload the change set to the target org. This is the second step where the administrator sends the change set from the source org to the destination org, which is usually a production org or another sandbox org. The administrator needs to have a deployment connection with the target org and permission to upload change sets.
Deploy the change set in the target org. This is the final step where the administrator validates and deploys the change set in the destination org. The administrator needs to have permission to deploy change sets and resolve any deployment errors or warnings.

## NEW QUESTION # 98

An admin is analyzingproject requirements and notes that there are requirements to support both high volume and multiple locations. What is the recommended approach for this scenario?

- A. Download the Multiple Locations sample flow from the Partner Community and have developers add Apex code to enhance performance
- B. Download the Single Location High Volume sample flow from the Partner Community and modify all the flows to loop through locations
- C. Download the Single Location High Volume sample flow from the Partner Community and have the developers add Apex code to enhance performance
- D. Download the Single Location High Volume sample flow and the Multiple Locationssample flow from the Partner Community and make a blend between the two considering trade-offs

**Answer: D**

Explanation:
TheSingle Location High Volume sample flow and the Multiple Locations sample flow are two examples of how to implement order fulfillment with Order Management. The Single Location High Volume sample flow is optimized for performance and scalability, but it only supports one fulfillment location per order. The Multiple Locations sample flow supports multiple fulfillment locations per order, but it has lower performance and scalability. To support both high volume and multiple locations, an admin can download both sample flows from the Partner Community and make a blend between them, considering trade-offs such as complexity, maintainability, and customizability.
