SAP C-BCSBS-2502 認定試験の出題範囲：

トピック	出題範囲
トピック 1	• Positioning SAP Business Data Cloud: This section of the exam measures the skills of Enterprise Architects and covers the positioning and strategic use of SAP Business Data Cloud. It involves understanding how data from various sources is managed, governed, and accessed to support intelligent business operations. The section aims to equip professionals with the ability to explain data unification and connectivity through SAP's cloud-based data platform.
トピック 2	• Positioning SAP Business Suite: This section of the exam measures the skills of Solution Consultants and covers how to effectively position the SAP Business Suite within various business scenarios. It includes understanding the core value, capabilities, and strategic advantages of SAP's integrated business applications. The focus is on enabling consultants to align SAP Business Suite offerings with customer needs to support end-to-end processes.
トピック 3	• Discovering SAP Business AI: This section of the exam measures the skills of Digital Transformation Specialists and focuses on exploring how SAP Business AI enables smarter decision-making. It includes identifying AI-driven features embedded within SAP solutions and how they contribute to automation, predictions, and enhanced business outcomes. Professionals are expected to understand how to promote AI adoption in business processes using SAP's intelligent technologies.

C-BCSBS-2502基礎訓練 & C-BCSBS-2502合格体験談

怠け者の罰は自分の失敗だけでなく、他人の成功でもあります。だから、あなたは自分自身をよりよくしたい場合、C-BCSBS-2502試験資料を買いましょう！C-BCSBS-2502認定試験資格証明書は権威的で、いい仕事を保障できます。C-BCSBS-2502試験資料を勉強し、簡単にC-BCSBS-2502試験に合格できます。

SAP Certified Associate - Positioning SAP Business Suite 認定 C-BCSBS-2502 試験問題 (Q12-Q17):

質問 # 12
What are some data challenges companies face that want to implement AI and insights for business transformation?
Note: There are 3 correct answers to this question.

- A. To boost confidence in AI-generated content
- B. To harmonize data from multiple SAP applications
- C. To simplify the data landscape
- D. To access SAP Line of Business (LOB) data consistently
- E. To integrate third-party applications

正解：B、C、D

解説：
The question asks about data challenges companies face when implementing AI and insights for business transformation, particularly in the context ofSAP Business Suite. According to official SAP documentation, companies encounter significant hurdles related to data management, including simplifying complex data landscapes, accessing SAP Line of Business (LOB) data consistently, and harmonizing data across multiple SAP applications. These align with Options A, B, and E, making them the correct answers.
Explanation of Correct Answers:
Option A: To simplify the data landscape
This is correct because a complex and fragmented data landscape is a major challenge for companies seeking to implement AI and insights. Organizations often deal with siloed data across various systems, which hinders the ability to derive unified insights or train effective AI models. ThePositioning SAP Business Suite documentation on learning.sap.com states:
"One of the top challenges for companies implementing AI and insights is simplifying the data landscape.
Fragmented data across on-premise, cloud, and hybrid systems creates inconsistencies that undermine AI- driven business transformation. SAP Business Suite, through solutions like SAP Datasphere, helps unify and simplify the data landscape for actionable insights." Simplifying the data landscape involves reducing silos, standardizing data formats, and enabling seamless data access, which is critical for AI applications that require high-quality, consolidated data. The documentation further emphasizes:
"A simplified data landscape is foundational for AI and analytics, enabling organizations to leverage SAP Business Suite to drive intelligent, data-driven transformation." This confirms simplifying the data landscape as a key challenge.
Option B: To access SAP Line of Business (LOB) data consistently
This is correct because consistent access to SAP Line of Business (LOB) data (e.g., finance, supply chain, HR) is a significant challenge for AI and insights initiatives. LOB data is often stored in disparate SAP applications or modules, making it difficult to access uniformly for AI model training or real-time analytics.
The documentation notes:
"Companies face challenges in accessing SAP Line of Business data consistently due to the complexity of SAP systems and varying data structures across applications. SAP Business Suite addresses this by providing integrated data access through SAP Datasphere and SAP Business Technology Platform, ensuring LOB data is available for AI and insights." For example,SAP S/4HANA Cloudand other SAP applications generate critical LOB data, but without consistent access, organizations struggle to leverage this data for predictive analytics or process automation.
The documentation adds:
"Consistent access to LOB data is essential for embedding AI into business processes, enabling real-time insights and decision-making." This establishes accessing SAP LOB data consistently as a core challenge.
Option E: To harmonize data from multiple SAP applications
This is correct because harmonizing data from multiple SAP applications (e.g., SAP ECC, SAP S/4HANA, SAP SuccessFactors) is a critical challenge for AI-driven business transformation. Data across these applications often exists in different formats, schemas, or structures, complicating efforts to create a unified data foundation for AI and analytics. The documentation states:
"Harmonizing data from multiple SAP applications is a significant challenge for companies pursuing AI and insights. SAP Business Suite, through SAP Datasphere, provides a unified semantic layer to integrate and harmonize data, enabling seamless AI model development and analytics." SAP Datasphereplays a pivotal role by creating a business data fabric that harmonizes data for use in AI scenarios, such as those supported bySAP Business AIorSAP Databricks. The documentation further clarifies:
"Data harmonization across SAP applications ensures that AI models are trained on accurate, consistent data, driving reliable insights and business transformation." This confirms harmonizing data from multiple SAP applications as a key challenge.
Explanation of Incorrect Answers:
Option C: To integrate third-party applications
This is incorrect because, while integrating third-party applications can be a challenge in some contexts, it is not specifically highlighted as a primary data challenge for implementing AI and insights in the context ofSAP Business Suite. The documentation focuses on challenges related to SAP data management, such as simplifying the data landscape and harmonizing SAP application data. WhileSAP Business Technology Platform (BTP)supports integration with third-party applications, the primary data challenges

for AI are internal to SAP systems:
"The key data challenges for AI and insights include simplifying the data landscape, ensuring consistent access to SAP LOB data, and harmonizing data across SAP applications." Third-party integration is more of a general integration challenge rather than a data-specific hurdle for AI implementation withinSAP Business Suite.
Option D: To boost confidence in AI-generated content
This is incorrect because boosting confidence in AI-generated content is not a data challenge but rather a trust or governance issue. While ensuring trust in AI outputs is important (e.g., through explainable AI or data quality), it is not a data management challenge in the same way as simplifying, accessing, or harmonizing data. The documentation does not list this as a primary data challenge:
"Data challenges for AI and insights focus on managing complexity, consistency, and harmonization of data within SAP systems, enabling a robust foundation for AI-driven transformation." Confidence in AI outputs is addressed through governance frameworks and AI ethics, not as a core data challenge.
Summary:
Companies implementing AI and insights for business transformation face data challenges, including simplifying the data landscape (to reduce silos and complexity), accessing SAP Line of Business (LOB) data consistently (to enable unified analytics), and harmonizing data from multiple SAP applications (to create a cohesive data foundation). These correspond to Options A, B, and E. Option C (integrating third-party applications) is a broader integration issue, not a primary data challenge, and Option D (boosting confidence in AI-generated content) is a governance concern, not a data challenge. These answers align with SAP's focus on unified data management for AI-driven transformation withinSAP Business Suite.

質問 # 13
What are some characteristics of trustworthy business AI? Note: There are 3 correct answers to this question.

- A. Relevant
- B. Responsible
- C. Reliable
- D. Resourceful
- E. Reusable

正解：A、B、C

解説：
Trustworthy business AI is a cornerstone of SAP's Business AI strategy, ensuring that AI solutions are ethical, effective, and aligned with enterprise needs. SAP emphasizes characteristics that build trust in AI deployments, particularly in the context of SAP Business Data Cloud and SAP S/4HANA, to deliver outcomes that are dependable and business-ready. The question asks for the characteristics of trustworthy business AI, with three correct answers. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" and "SAP Business AI" narratives.
* Option A: ResourcefulWhile being resourceful (i.e., efficiently utilizing resources) may be a desirable trait for AI systems in general, it is not explicitly identified as a characteristic of trustworthy business AI in SAP's documentation. SAP focuses on attributes like relevance, responsibility, and reliability to define trustworthiness, emphasizing ethical and dependable outcomes over resource efficiency. The term "resourceful" does not appear in the context of trustworthy AI in the provided materials.Extract:
"SAP Business AI is built on a foundation of responsible AI, ensuring transparency, fairness, and compliance. Our solutions prioritize ethical AI practices to minimize bias and deliver trusted outcomes for your business." This option is incorrect.
* Option B: ReusableReusability, such as reusing AI models or data products across applications, is a practical feature in some AI systems but is not a defining characteristic of trustworthy business AI according to SAP's framework. Trustworthy AI is more about ensuring the AI is ethical, accurate, and contextually appropriate, rather than its ability to be reused. The documentation does not highlight reusability as a key attribute of trustworthy AI, focusing instead on attributes that ensure trust and dependability.Extract:
"Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." This option is incorrect.
* Option C: RelevantRelevance is a critical characteristic of trustworthy business AI, ensuring that AI outputs are contextually appropriate and aligned with specific business needs. SAP's Business AI, including tools like Joule and SAP Business Data Cloud, leverages semantically rich data to deliver AI insights that are relevant to business processes in areas like Finance, Supply Chain, and HR. The documentation explicitly identifies relevance as a key attribute, emphasizing that trustworthy AI must provide meaningful, business-specific results.Extract: "Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." Extract: "SAP Business AI delivers relevant outcomes by embedding AI into business

processes, ensuring that insights and recommendations are tailored to your specific business context." This option is correct.
* Option D: ResponsibleResponsibility is a fundamental characteristic of trustworthy business AI, encompassing ethical practices, transparency, and fairness to minimize bias and ensure compliance with regulations. SAP's AI strategy prioritizes responsible AI to build trust, ensuring that AI systems operate ethically and align with corporate governance standards. This is a core focus in SAP's documentation and marketing materials, making it a key characteristic of trustworthy AI.Extract: "SAP Business AI is built on a foundation of responsible AI, ensuring transparency, fairness, and compliance. Our solutions prioritize ethical AI practices to minimize bias and deliver trusted outcomes for your business." Extract:
"Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." This option is correct.
* Option E: ReliableReliability is a crucial characteristic of trustworthy business AI, ensuring that AI systems deliver consistent, accurate, and dependable results. SAP emphasizes reliability to ensure that AI outputs can be trusted for critical business decisions, supported by high-quality data and robust governance. The documentation consistently highlights reliability as a key attribute of trustworthy AI, particularly in the context of SAP Business Data Cloud and SAP Business AI.Extract: "Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." Extract: "SAP Business AI ensures reliable outcomes by leveraging trusted data and advanced governance, enabling businesses to depend on AI for critical decision-making." This option is correct.
Summary of Correct Answers:
* C: Relevant AI ensures contextually appropriate, business-specific outcomes, aligning with enterprise needs.
* D: Responsible AI prioritizes ethical practices, transparency, and fairness to minimize bias and ensure compliance.
* E: Reliable AI delivers consistent, accurate, and dependable results, building trust in business applications.

質問 # 14
What is the key advantage of SAP data products?

- A. Ready-to-run insights that leverage planning and analysis
- B. Consistency and business context embedded in SAP-managed dataset and semantics
- C. Self-service analytical modeling within a data fabric architecture

正解：B

解説：
SAP data products are standardized, curated datasets within SAP Business Data Cloud (BDC) that encapsulate business data with embedded semantics and context, designed to enable advanced analytics, AI, and seamless data sharing across SAP and non-SAP systems. The question asks for the key advantage of SAP data products, with one correct answer. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" and "SAP Business Data Cloud" narratives.
* Option A: Consistency and business context embedded in SAP-managed dataset and semanticsThe primary advantage of SAP data products is their ability to provide consistency and embedded business context within SAP-managed datasets and semantics. These data products are pre-curated, semantically rich datasets that preserve the business meaning and context of data from SAP applications (e.g., SAP S
/4HANA, SAP SuccessFactors) and integrate with non-SAP data. This ensures that data is consistent, trusted, and ready for analytics and AI without requiring extensive re-engineering or external transformation. The documentation explicitly highlights this as the key advantage, emphasizing how SAP data products eliminate the need to rebuild business logic and maintain data integrity across use cases.Extract: "SAP Business Data Cloud offers several capabilities for connecting and harmonizing data. By leveraging an SAP-managed Lakehouse, users can maintain rich business semantics for SAP- sourced data products right out-of-the-box. ... Data products are curated and managed by SAP, ensuring consistency and business context for advanced analytics and AI." Extract: "Built-In Business Semantics: Because SAP data already carries deep business context and semantics, Databricks can provide powerful analytics and machine learning without forcing customers to re-invent data pipelines or guess at the meaning of fields." Extract: "SAP data products provide a consistent, semantically rich foundation for data sharing, ensuring that business context is preserved across SAP and non-SAP systems, reducing complexity and enabling trusted insights." This option is correct.
* Option B: Ready-to-run insights that leverage planning and analysisWhile SAP Business Data Cloud provides ready-to-run insights through its Intelligent Applications, which combine planning and analysis, this is a feature of the broader SAP BDC platform, not a

specific advantage of SAP data products. SAP data products are the underlying datasets that feed these applications, but their primary role is to provide a consistent, semantically rich data foundation, not to deliver insights directly. The documentation distinguishes between data products (data layer) and intelligent applications (analytics layer), making this option less accurate as the key advantage.Extract: "New to SAP Business Data Cloud (SAP BDC) are context-aware SAP Business Data Cloud Intelligent Applications. These pre- configured dashboards provide ready-to-run insights by combining planning and analysis, all infused with trusted Artificial Intelligence (AI) to drive smarter, faster decisions." This option is incorrect.
* Option C: Self-service analytical modeling within a data fabric architectureSAP Business Data Cloud supports self-service analytical modeling through SAP Datasphere, which operates within a data fabric architecture to enable business users to create data models. However, this capability is not a primary advantage of SAP data products themselves. SAP data products are focused on delivering curated, SAP- managed datasets with embedded semantics, not on enabling self-service modeling. The data fabric architecture is a broader feature of SAP BDC, and self-service modeling is a function of tools like SAP Datasphere, not the data products.Extract: "SAP Datasphere: This works as central component in BDC by creating consumption ready data models on top of Data Products while also managing analytical roles, access controls etc." This option is incorrect.
Summary of Correct answer:
* A: The key advantage of SAP data products is their consistency and business context embedded in SAP- managed datasets and semantics, ensuring trusted, semantically rich data for analytics and AI without the need for external re-engineering.

質問 # 15
Which key feature differentiates SAP Business Suite from traditional ERP solutions? Please choose the correct answer.

- A. No integration with third-party applications
- B. Focus on standalone business modules
- C. Lack of real-time analytics
- D. Integration with cloud-based applications

正解：D

質問 # 16
What are some key differentiators of SAP Business AI?
Note: There are 3 correct answers to this question.

- A. Predictive Analytics
- B. Large foundation models
- C. AI Foundation
- D. Embedded AI
- E. Ecosystem of Innovation

正解：C、D、E

解説：
The question asks for the key differentiators ofSAP Business AI, which is a suite of AI capabilities integrated intoSAP Business Suiteto enhance business processes, decision-making, and automation. According to official SAP documentation and the provided search results, the key differentiators ofSAP Business AIinclude its ecosystem of innovation, embedded AI, and AI Foundation. These align with Options A, C, and E, making them the correct answers.
Explanation of Correct Answers:
Option A: Ecosystem of Innovation
This is correct becauseSAP Business AIis distinguished by its robust ecosystem of innovation, which includes partnerships with leading technology providers (e.g., NVIDIA, Google Cloud, Microsoft, AWS, Cohere) and implementation partners to deliver cutting-edge AI solutions. This ecosystem fosters collaborative innovation, enablingSAP Business AIto integrate advanced AI models, ensure interoperability, and address customer- specific needs through a network of expertise. TheSAP Business AIoverview onwww.sap.comstates:

"SAP's AI strategy includes a robust partner ecosystem with synergistic collaboration, partnering with industry leaders like NVIDIA, Google Cloud, and Cohere to deliver interoperable AI agents and scalable solutions. This ecosystem enables SAP Business AI to address unique customer challenges through combined expertise and innovation." sap.com Additionally, theSAP News Centeremphasizes the role of partners in driving innovation:
"A key element of SAP's AI strategy is leveraging partners' expertise. Partners develop innovative AI solutions and extensions, enhancing the SAP portfolio with customer-specific use cases built on SAP BTP." news.sap.com This ecosystem differentiatesSAP Business AIby combining SAP's deep business process knowledge with external AI advancements, ensuring flexibility and rapid adoption of new technologies.
Option C: Embedded AI
This is correct becauseSAP Business AIis uniquely differentiated by its embedded AI capabilities, which are seamlessly integrated into SAP applications (e.g.,SAP S/4HANA,SAP SuccessFactors,SAP Analytics Cloud) to enhance business processes directly within workflows. Unlike standalone AI solutions, embedded AI automates tasks, provides context-aware insights, and optimizes processes without requiring users to leave their SAP environment. TheExploring SAP's AI Strategylesson on learning.sap.com states:
"Embedded AI Capabilities enhance SAP products by automating tasks, analyzing data, improving user experience, optimizing processes, fostering innovation, and ensuring seamless integration. Joule, a generative AI copilot, is embedded within SAP applications, offering generative AI, predictive analytics, process automation, and context-aware recommendations." learning.sap.com For example,SAP S/4HANAuses embedded AI for predictive maintenance and supply chain optimization, whileSAP Concurautomates expense reporting. TheSAP Business AIpage onwww.sap.comfurther notes:
"Drive impact with AI grounded in your business data and embedded into every business function. ... With access to over 230 AI-powered scenarios-expanding to 400 by the end of 2025-SAP Business AI streamlines operations across finance, supply chain, and more." sap.com This embedded approach ensures that AI is relevant and immediately applicable, distinguishingSAP Business AIfrom generic AI platforms.
Option E: AI Foundation
This is correct because theAI FoundationonSAP Business Technology Platform (BTP)is a key differentiator, providing a comprehensive toolkit for developers to build, extend, and run custom AI solutions tailored to business needs. It includes services likeSAP AI Core,Generative AI Hub, and access to leading AI models, ensuring scalability, security, and integration with SAP and non-SAP data. TheAI Foundation, SAP's all-in- one AI toolkitarticle on community.sap.com states:
"AI Foundation is SAP's all-in-one AI toolkit, offering developers AI that's ready-to-use, customizable, grounded in business data, and supported by leading generative AI foundation models. It is also the basis for AI capabilities that SAP embeds across its portfolio." community.sap.com TheSAP Sapphire Innovation Guide 2025further elaborates:
"AI Foundation is the backbone of SAP's AI technologies and provides comprehensive developer tools to build, extend, and run custom AI solutions at scale-all in one system. It simplifies AI development and operations, offering tools like the Prompt Optimizer and access to models like GPT-4.1, Claude 3.7 Sonnet, and Gemini 2.5 Pro." sap.com This differentiatesSAP Business AIby enabling businesses to create bespoke AI applications while leveraging SAP's enterprise-grade infrastructure, ensuring flexibility and governance.
Explanation of Incorrect Answers:
Option B: Large foundation models
This is incorrect becauseSAP Business AIdoes not primarily differentiate itself through the development or use of large foundation models (e.g., large language models or LLMs). Instead, SAP partners with leading LLM providers (e.g., Cohere, Mistral AI, Meta) to integrate their models into theSAP BTP Generative AI Hub, focusing on business-contextualized AI rather than building proprietary LLMs. TheSAP Business AIarticle on community.sap.com clarifies:
"SAP leverages a rich ecosystem of technology partner LLM offerings through SAP BTP's AI Foundation and Generative AI Hub, rather than developing SAP-specific LLMs. This approach ensures access to the latest innovations while prohibiting partners from training on customer data." pages.community.sap.com While SAP plans to fine-tune generic LLMs and create proprietary foundation models for structured data (e.g., SAP Foundation Modelfor tabular data), these are not yet a primary differentiator compared to the ecosystem, embedded AI, and AI Foundation. learning.sap.com Option D: Predictive Analytics This is incorrect because, while predictive analytics is a significant capability ofSAP Business AI(e.g., forecasting demand inSAP Integrated Business Planningor predicting equipment failures inSAP S/4HANA), it is not a unique differentiator. Predictive analytics is a common feature in many AI platforms and is one of many capabilities withinSAP Business AI, not a defining characteristic. TheSAP Business AIdocumentation onwww.fingent.comnotes:
"SAP Business AI solutions use machine learning and advanced analytics, including predictive analytics, to gain insights into complex data. However, its differentiation lies in its integration with business processes and data, not the analytics techniques alone." fingent.com The unique value ofSAP Business AIcomes from its ecosystem, embedded nature, and developer-centric AI Foundation, rather than specific techniques like predictive analytics, which are widespread across AI solutions.
Summary:
The key differentiators ofSAP Business AIare its ecosystem of innovation (leveraging a robust partner network for collaborative AI solutions), embedded AI (seamlessly integrated into SAP applications for process optimization), and AI Foundation (providing a scalable toolkit for custom AI development), corresponding to Options A, C, and E. Option B is incorrect because SAP relies on partner LLMs rather than proprietary large foundation models as a differentiator. Option D is incorrect because predictive analytics, while important, is not a unique differentiator compared to the broader ecosystem and integration capabilities. These differentiators

align with SAP's strategy to deliver relevant, reliable, and responsible AI withinSAP Business Suite, as supported by the provided search results and official documentation.
