

# EXIN CDCP PDF Questions

BTW, DOWNLOAD part of PDFBraindumps CDCP dumps from Cloud Storage: <https://drive.google.com/open?id=1xAFzKT5Lm04nf3gwsJKzRdPnwkJ0P6d->

PDFBraindumps offers real EXIN CDCP Questions that can solve this trouble for students. Professionals have made the EXIN CDCP questions of PDFBraindumps after working days without caring about themselves to provide the applicants with actual CDCP exam questions PDFBraindumps guarantees our customers that they can pass the Certified Data Centre Professional (CDCP) (CDCP) exam on the first try by preparing from PDFBraindumps, and if they fail to pass it despite their best efforts, they can claim their payment back according to some terms and conditions.

## EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Designing a Scalable Network Infrastructure: It covers ANSI</li><li>TIA-942 cabling hierarchy, network redundancy, structured Cabling System, and planning considerations.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Equipment Racks: It discusses power rail</li><li>strip options, security considerations, and rack standards, properties and selection criteria.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Auxiliary Systems: The topic covers water leak detection systems, data centre monitoring requirements, EMS, BMS and DCIM.</li></ul>
Topic 6	<ul style="list-style-type: none"><li>Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.</li></ul>
Topic 7	<ul style="list-style-type: none"><li>Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).</li></ul>
Topic 8	<ul style="list-style-type: none"><li>Raised Floor</li><li>Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.</li></ul>

## New APP EXIN CDCP Simulations | CDCP Test Fee

With so many online resources, knowing where to start when preparing for an EXIN CDCP exam can be tough. But with EXIN CDCP practice test, you can be confident you're getting the best possible EXIN CDCP Exam Dumps. EXIN exam mirrors the EXIN CDCP exam-taking experience, so you know what to expect on EXIN CDCP exam day.

### EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q64-Q69):

#### NEW QUESTION # 64

Which one of the following is an Objective of Data Center Fire Protection?

- A. Information
- B. Representation
- C. Suppression
- D. Depression

**Answer: C**

Explanation:

The objective of data center fire protection is to suppress or extinguish a fire before it can cause significant damage to the equipment, personnel, or business continuity. Fire suppression systems are designed to reduce the heat, oxygen, or fuel elements of the fire triangle, and to limit the spread of fire and smoke. Fire suppression systems can be classified into two types: water-based and gas-based. Water-based systems include sprinklers, mist, and water spray systems, which use water as the extinguishing agent. Gas-based systems include inert gas, halocarbon, and clean agent systems, which use gases or chemicals as the extinguishing agent. The choice of fire suppression system depends on several factors, such as the fire risk, the type of fuel, the environmental impact, the reliability, the cost, and the compatibility with the data center equipment and operations.

#### NEW QUESTION # 65

What is the most preferred unit of measure for cooling capacity?

- A. Ton
- B. BTU
- C. Watt
- D. Horsepower

**Answer: C**

Explanation:

Cooling capacity is the measure of a cooling system's ability to remove heat from a space. The most preferred unit of measure for cooling capacity is watt (W), which is the SI unit for power. Watt is defined as the amount of energy transferred or converted per unit time. One watt is equal to one joule of energy per second. Using watt as the unit of measure for cooling capacity allows for easy comparison and calculation of the cooling performance and efficiency of different cooling systems.

Other units of measure for cooling capacity are ton, BTU, and horsepower, but they are less common and less convenient than watt. Ton is a unit of measure that describes how much water at freezing temperature can be frozen in 24 hours, equivalent to 3.5 kW or 12,000 BTU/h. BTU (British Thermal Unit) is a unit of measure that describes the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit, equivalent to 0.293 W. Horsepower is a unit of measure that describes the rate at which work is done, equivalent to 746 W.

#### NEW QUESTION # 66

Which type of Fire Detection Device is recommended for protecting a Data Center?

- A. Flame detector
- B. Heat detector
- **C. Smoke detector**
- D. None of the above

**Answer: C**

Explanation:

According to the CDCP® Preparation Guide, smoke detectors are the most common type of fire detection devices used in data centers, as they can detect a fire in its early stages and provide early warning to the occupants and authorities. Smoke detectors can be either spot-type or air-aspirating, depending on the design and goals of the data center. Spot-type detectors are inexpensive and simple, but may cause activation delay and false alarms. Air-aspirating detectors are more sensitive and reliable, but may require more maintenance and installation costs. Both types of detectors should be installed in accordance with the relevant standards and codes, such as NFPA 72 and EN 54.

#### NEW QUESTION # 67

Which is the most damaging type of floor load?

- A. All loads are equally damaging to raised floor tiles
- B. Uniformly Distributed Load (UDL)
- **C. Rolling Load (RL)**
- D. Concentrated Load / Point Load (CP/ PL)

**Answer: C**

Explanation:

The most damaging type of floor load for raised floor tiles in a data centre is the rolling load (RL), according to the CDCP Preparation Guide<sup>1</sup> and various web sources<sup>2,3,4</sup>. A rolling load is the load that is applied by a moving object, such as a pallet jack, a forklift, or a rack on wheels. A rolling load can cause more stress and fatigue on the raised floor tiles than a static load, such as a concentrated load (CP) or a uniformly distributed load (UDL), because it creates dynamic forces and impacts that can crack, dent, or deform the tiles. Moreover, a rolling load can also damage the pedestals and stringers that support the tiles, and cause the tiles to become loose or misaligned. Therefore, when designing and installing a raised floor system, it is important to consider the maximum rolling load that the tiles can withstand, and to use appropriate materials and methods to enhance the strength and durability of the tiles. For example, some possible solutions include using steel or concrete-filled tiles, reinforcing the edges and corners of the tiles, and using locking or gravity-held systems to secure the tiles.

#### NEW QUESTION # 68

The temperature and humidity values indicated on the display of the Computer room air conditioner unit are the values measured at which point?

- **A. It is the value measured at the intake of the air conditioner.**
- B. It is the value measured at the front of the rack of the aisle the air conditioner is situated.
- C. It is the average value between the intake and exhaust (outlet) of the air conditioner.
- D. It is the value measured at the exhaust (outlet) of the air conditioner.

**Answer: A**

**Explanation:**

According to the IBM document on temperature and humidity design criteria<sup>1</sup>, the temperature and humidity values indicated on the display of the computer room air conditioner unit are the values measured at the intake of the air conditioner. This is because the intake is where the air conditioner draws the air from the computer room and cools and dehumidifies it before sending it back to the computer room. The display shows the current conditions of the computer room air, which are used to adjust the cooling and dehumidifying operations of the air conditioner. The values measured at the exhaust (outlet) of the air conditioner are not displayed, as they are not relevant for the computer room environment. The values measured at the front of the rack of the aisle the air conditioner is situated are also not displayed, as they may vary depending on the distance and location of the rack. The average value between the intake and exhaust (outlet) of the air conditioner is not displayed, as it does not reflect the actual conditions of the computer room air or the air conditioner performance.

## NEW QUESTION # 69

.....

PDFBraindumps guarantee the best valid and high quality CDCP study guide which you won't find any better one available. CDCP training pdf will be the right study reference if you want to be 100% sure pass and get satisfying results. From our CDCP free demo which allows you free download, you can see the validity of the questions and format of the CDCP actual test. In addition, the price of the CDCP dumps pdf is reasonable and affordable for all of you.
