We all know that it is not easy to prepare the 300-620 exam; there are thousands of candidates to compete with you. So it is a fierce competition. If you want to win out in the exam, you need the professional study materials to guide you. Our 300-620 Study Materials are confident to ensure that you will acquire the certificate. And the pass rate of our 300-620 practice guide is high to 98% to 100%.

To take the Cisco 300-620 exam, candidates are required to have a solid understanding of data center networking technologies, including Ethernet and IP networking, data center storage, and virtualization. They should also have experience working with Cisco Nexus switches and be familiar with Cisco ACI architecture, policies, and automation tools. 300-620 exam consists of 60-70 questions that need to be answered in 90 minutes, with a passing score of 750 or higher out of 1000.

The Main Topics of the Exam

In this test, questions will be derived from six major modules that include related sub-topics. Here are the areas that the candidates can expect to face in 300-620:

- **The ACI integrations**

15% of the questions are expected to be delivered from this topic. The applicants will be asked how to perform the implementation of the VMware vCenter DVS integration and what is the resolution immediacy when it comes to VMM. Finally, the candidates should be able to implement a managed as well as an unmanaged service graph.

- **Packet Forwarding in ACI**

This domain covers 15% of the exam syllabus. It includes the concepts such as endpoint learning and the implementation of bridge domain configuration. This the knowledge of processes like unicast routing, ARP flooding, etc.

- **ACI anywhere**

This is the last major topic you will be assessed on and it takes about 10% of the entire exam. Here, the candidates will be asked to describe multipod and multisite.

The 300-620 Exam evaluates the candidates' understanding of Cisco switches running in the ACI mode and includes the topics, such as ACI fabric, ACI management ACI anywhere, etc. Thus, you should be fluent in configuring, implementing, and managing Cisco switches in the ACI mode to get through this test. All in all, the exam syllabus consists of 6 knowledge areas specified by the vendor. All of these domains will contribute a certain percentage to the overall number of questions, which represent the following:

- **ACI Fabric Infrastructure (20%):** This topic covers the information of ACI hardware, topology, fabric discovery, and object model. It is important to be able to implement the ACI policies and ACI logical constructs as well as use event record, audit log, and faults;
- **ACI Management (20%):** This is one of the biggest modules of the exam that covers the implementation of configuration backup, in-band and out-of-band, as well as RBAC and AAA. You need to know how to configure an upgrade and use snmp services and syslog.
- **ACI Packet Forwarding (15%):** In this section, you need to be able to implement bridge domain configuration and explain the details of endpoint learning;
- **External Network Connectivity (20%):** This part will evaluate the individuals' skills in implementing Layer 3 and Layer 2 (STP/MCP basics);
- **ACI Anywhere (10%):** This objective is not so big in comparison to other areas, however, it is essential for you to know about multisite and multipod;

Are you ready to accept this challenge? Looking for the simple, quick, and easiest way to pass the career advancement Implementing Cisco Application Centric Infrastructure (300-620) certification exam? If your answer is yes then you do not need to worry about it. Just visit the Free4Torrent and explore the top features of Implementing Cisco Application Centric Infrastructure (300-620) exam practice test questions offered by the trusted platform Free4Torrent. With Free4Torrent 300-620 Dumps questions you can easily prepare well and feel confident to pass the final Implementing Cisco Application Centric Infrastructure exam easily.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q69-Q74):

NEW QUESTION # 69

Drag and drop the Cisco ACI filter entry options from the left onto the correct categories on the right indicating what are required or optional parameters.

Name	Optional Parameters
ARP Flag	
Ether Type	
IP Protocol	
Source Port From	
	Required Parameters

NEW QUESTION # 70

An engineer is implementing an out-of-band (OOB) management access for the Cisco ACI fabric.

The secure access must meet these requirements:

- Only GUI and secure shell must be allowed to access the management interfaces of the ACIs.
- The only IP ranges that must be permitted to connect the fabric will be 10.10.10.0/24 and 192.168.15.0/24.

Which configuration set meets these requirements?

- A. Create an out-of-band EPG in the external management entity. Associate the management profile with the OOB contract.
- **B. Implement HTTPS and SSH protocol filters in the OOB contract. Add the required subnets to the external network instance profile.**
- C. Set up static IPs on the management interfaces from the required IP range. Add the required subnets to the external network instance profile.
- D. Create an out-of-band EPG in the common tenant. Associate the external network instance profile with the OOB contract.

Answer: B

NEW QUESTION # 71

An engineer must allow multiple external networks to communicate with internal ACI subnets. Which action should the engineer take to assign the prefix to the class ID of the external Endpoint Group?

- A. Configure subnets with the Import Route Control Subnet flag enabled.

- B. Configure subnets with the External Subnets for External EPG flag enabled.
- C. Enable the Export Route Control Subnet for the External Endpoint Group flag.
- D. Enable an L3out with Shared Route Control Subnet.

Answer: B

[x/ACI_Best_Practices/b_ACI_Best_Practices/b_ACI_Best_Practices_chapter_01001.html](https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/1-x/ACI_Best_Practices/b_ACI_Best_Practices/b_ACI_Best_Practices_chapter_01001.html)

The external subnets for an external EPG are used to define the subnets that should be classified to the external EPG. This policy does not affect routing. It is similar to an Access Control List (ACL) that assigns a prefix to the class id (pcTag) of the external EPG.

NEW QUESTION # 72

Which feature should be disabled on a bridge domain when a default gateway for endpoints is on an external device instead of a Cisco ACI bridge domain SVI?

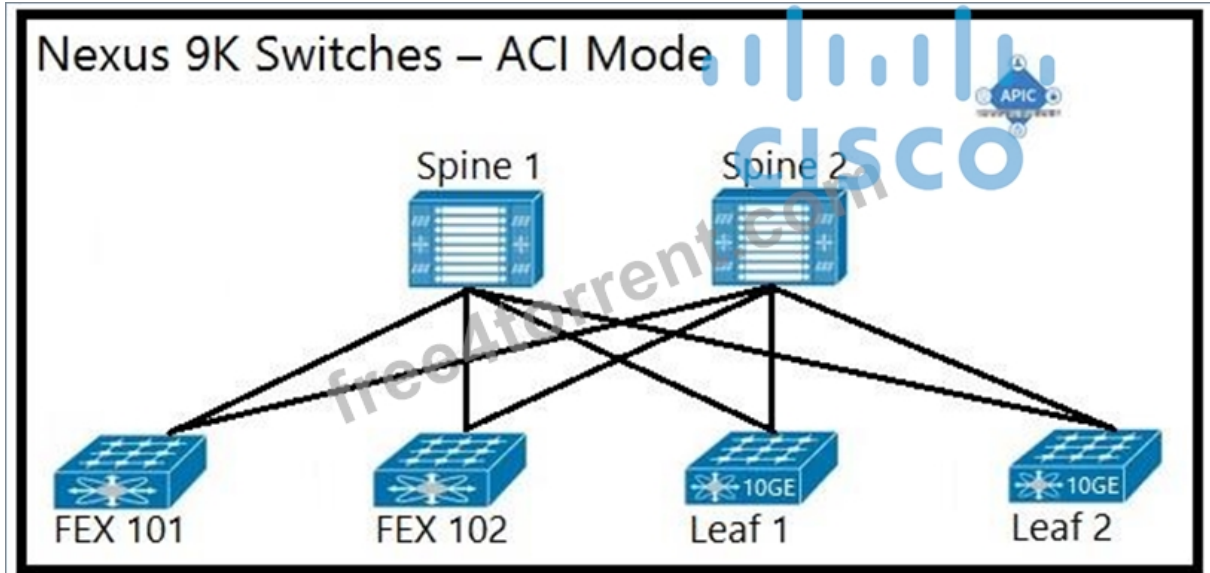

- A. unknown unicast flooding
- B. proxy ARP
- C. ARP flooding
- D. unicast routing

Answer: A

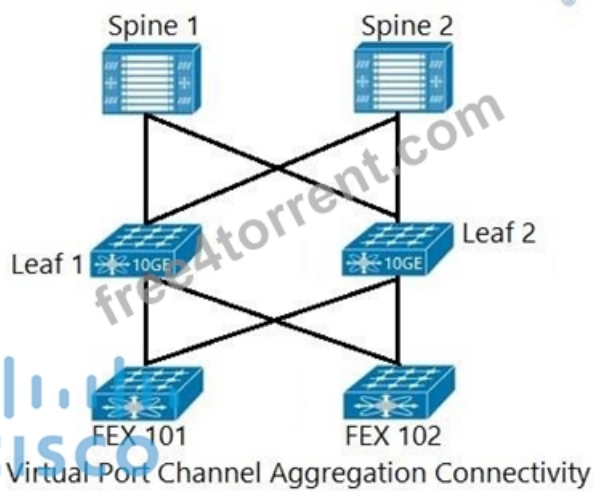

NEW QUESTION # 73

An engineer is implementing a Cisco ACI data center network that includes Cisco Nexus 2000 Series 10G fabric extenders. Which physical topology is supported?

- A.

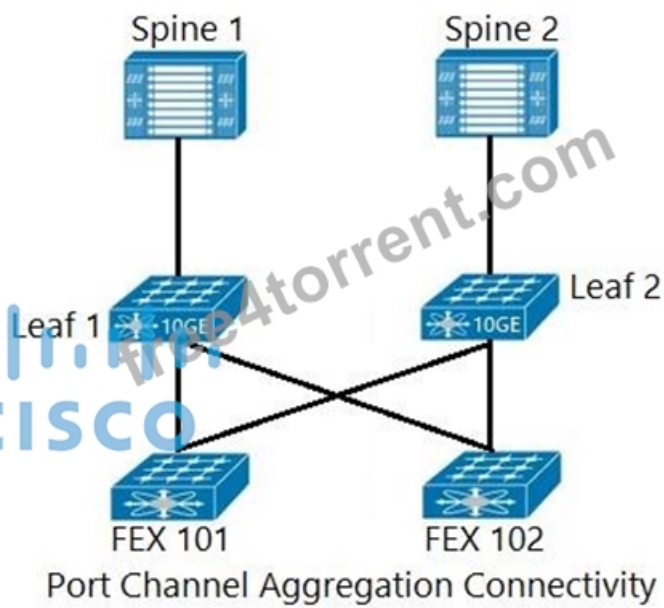

Nexus 9K Switches – ACI Mode

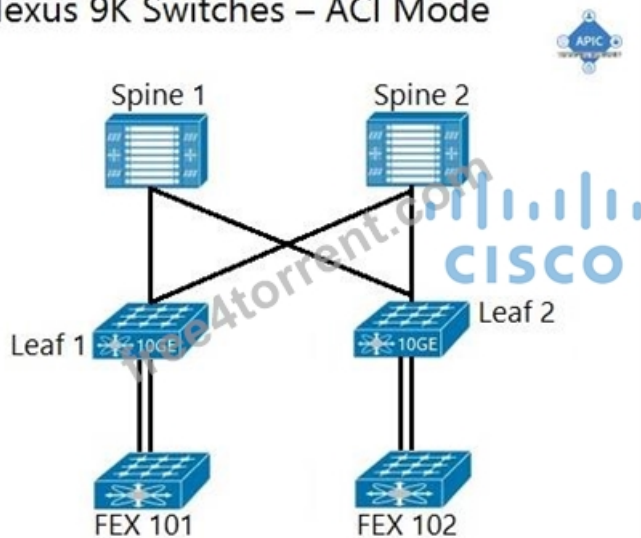

- B.

Nexus 9K Switches – ACI Mode

- C.

Nexus 9K Switches – ACI Mode

- D.

Answer: B

Explanation:

The supported physical topology for a Cisco ACI data center network that includes Cisco Nexus 2000 Series 10G fabric extenders is depicted in Option A. This topology illustrates a pair of spine switches connected to leaf switches, which are then connected to the fabric extenders. The Cisco Nexus 2000 Series Fabric Extenders act as remote line cards for a parent Cisco Nexus switch, extending the network fabric. The topology shown is a spine-leaf architecture, which is a scalable, high-bandwidth framework that is typical in ACI deployments.

Reference:

For a detailed understanding of the ACI fabric and supported topologies, you can refer to the Cisco Application Centric Infrastructure Design Guide, which provides comprehensive information on design recommendations and deployment models: Cisco ACI Design Guide.

To learn more about the role of fabric extenders in the ACI architecture, the following resource offers insights into how they integrate with the ACI fabric: Understanding the ACI Fabric.
