HCLSoftware Certified Administrator- HWA 10.2 Sample Questions (Q428-Q433):

NEW QUESTION # 428

HCL HWA 10.2 dynamic agent in Kubernetes shows JobManager unable to report statuses despite

agent.dynamic.gateway.port=31114 correct, with ssmagent flooding Monbox.msg file events. Netman cycles NetReq.msg LINK retries but gateway remains responsive. Monman edwa connection timeout=180s logs appear. What environment variable misconfiguration causes this JobManager-monman linkage failure?

- A. T(ssmCheckFile)=300 excessive polling
- **B. agent.dynamic.gateway.jmFullyQualifiedHostname mismatch**
- C. edwa connection timeout=90 too restrictive
- D. enEventProcessorHttpsProtocol=NO setting

Answer: B

Explanation:

agent.dynamic.gateway.jmFullyQualifiedHostname must match post-pod FQDN for JobManager gateway connectivity on port 31114; mismatch causes ssmagent Monbox.msg event floods despite netman NetReq.msg retries and gateway stability. Correcting this env var restores monman edwa forwarding without altering T(ssmCheckFile) or protocol settings, isolating the dynamic agent workstation processes gateway dependency from standard FTA Courier.msg batchman flows.

NEW QUESTION # 429

Scenario: Dynamic agent jobs are not receiving updated variables from the master in HCL Workload Automation 10.2. Which process and communication path should be examined?

- **A. Liberty broker to jobman via HTTPS**
- B. Monman to event processor
- C. Mailman to jobman via local queue
- D. Batchman to netman
- E. Writer to Symphony

Answer: A

Explanation:

Liberty broker to jobman via HTTPS handles direct job dispatch and parameter streaming for dynamic agents without traditional message files.

NEW QUESTION # 430

Netman NetReq.msg fills with 2000+ UNLINK/START cycles on HCL HWA 10.2 FTA due to broker connectivity blips, blocking mailman Mailbox.msg job status routing to batchman. Jobman Courier.msg launches succeed. What localopts retry parameter prevents netman cascade to scheduling?

- **A. T(netmanRetryInterval)=60; monitor NetReq.msg growth**
- B. T(bmNetmanPoll)=180; batchman sync
- C. netmanMaxRetries=3; force failures
- D. enBrokerRetry=NO; aggressive unlinks

Answer: A

Explanation:

T(netmanRetryInterval)=60 stabilizes NetReq.msg UNLINK/START cycles during broker blips, preventing mailman Mailbox.msg blocking and batchman desync while jobman maintains Courier.msg independence. Monitoring NetReq.msg growth post-tuning ensures workstation processes netman resilience without enBrokerRetry changes affecting core inter-process communication.

NEW QUESTION # 431

Scenario: HWA 10.2 installation on SLES15 with separate TWA_HOME=/hwa and TWS_DATA_DIR=/data_hwa spanning two LVM volumes. twsinst -new fails:

"TWS_DATA_DIR must be subdirectory of TWA_HOME". Which installation path override resolves this?

- A. Use -unified_install true parameter
- B. TWS_DATA_DIR=/hwa/data_hwa absolute path only
- **C. -data_dir /hwa/data; symlink /data_hwa to /hwa/data**

- D. Set TWS_DATA_DIR=\$TWA_HOME/data_hwa in response file

Answer: C

Explanation:

HWA 10.2 enforces TWS_DATA_DIR as subdirectory of TWA_HOME for relative path resolution in config files. Create /hwa/data, mount /dev/vg_data/lv_data_hwa to it via mount -o bind, update /etc/fstab for persistence. Rerun twsinst -data_dir /hwa/data verifies unified paths.

NEW QUESTION # 432

Scenario: Multiple Dynamic Workload Consoles are deployed for load balancing. Customization is applied to one but not visible on others. Why?

- A. Requires database synchronization
- **B. Customization is instance-specific**
- C. Branding propagates automatically after 24 hours
- D. Global settings override local files

Answer: B

Explanation:

Each Dynamic Workload Console instance maintains its own file system for customization assets; branding changes must be applied individually to each console's installation directory.
