

Reliable H12-841_V1.5 Test Simulator, H12-841_V1.5 Simulation Questions

DOWNLOAD the newest Actual4test H12-841_V1.5 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1Qc51k7phUpCvreZzNzDBKkagzcoAk6Z->

Actual4test's Huawei H12-841_V1.5 questions are available in PDF format. Our HCIP-Datacom-Campus Network Planning and Deployment V1.5 (H12-841_V1.5) PDF is embedded with questions relevant to the actual exam content only. Huawei H12-841_V1.5 PDF is printable and portable, so you can learn with ease and share it on multiple devices. You can use this Huawei H12-841_V1.5 PDF on your mobile and tablet anywhere, anytime, without the internet and installation process. Our qualified team of HCIP-Datacom-Campus Network Planning and Deployment V1.5 Professionals update HCIP-Datacom-Campus Network Planning and Deployment V1.5 (H12-841_V1.5) study material to improve the quality and to match the changes in the syllabus and pattern shared by Huawei.

Huawei H12-841_V1.5 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Campus Network Security	10%	- Network Security Policy - 802.1X and MAC Authentication - Portal Authentication - Wired Access Technology
Topic 2: Key Technologies of Campus Networks	30%	• 1. MAC Address Table • 2. VLAN Principles • 3. Eth-Trunk and Link Aggregation • 4. STP/RSTP/MSTP - Wireless Access Technology • 1. WLAN Networking (AC + AP) • 2. WLAN Basics

Topic 3: Campus Network Reliability	15%	- BFD - Stack (iStack / CSS) - VRRP - Eth-Trunk
Topic 4: Campus Network Management and O&M	10%	- NCE-Campus (iMaster NCE) - Network O&M Tools - Configuration Management
Topic 5: Campus Network Basics	15%	- Campus Network Architecture and Design - VXLAN Technology Basics - Campus Network Overview - VXLAN Concepts and Principles
Topic 6: VXLAN Campus Network	20%	- BGP EVPN - VXLAN Gateway - VXLAN Campus Network Design

2026 Reliable H12-841_V1.5 Test Simulator | The Best HCIP-Datacom-Campus Network Planning and Deployment V1.5 100% Free Simulation Questions

Actual4test Huawei H12-841_V1.5 exam training materials praised by the majority of candidates is not a recent thing. This shows Actual4test Huawei H12-841_V1.5 exam training materials can indeed help the candidates to pass the exam. Compared to other questions providers, Actual4test Huawei H12-841_V1.5 exam training materials have been far ahead. uestions broad consumer recognition and reputation, it has gained a public praise. If you want to participate in the Huawei H12-841_V1.5 Exam, quickly into Actual4test website, I believe you will get what you want. If you miss you will regret, if you want to become a professional IT expert, then quickly add it to cart.

Huawei HCIP-Datacom-Campus Network Planning and Deployment V1.5 Sample Questions (Q241-Q246):

NEW QUESTION # 241

(In the admission design for large- and medium-sized campus networks, which of the following authentication modes can be used for PCs connected to IP phones?)

- A. Portal authentication
- B. MAC address authentication
- C. 802.1X authentication
- **D. Multi-mode authentication**

Answer: D

Explanation:

Comprehensive and Detailed 200 to 250 words of Explanation From HCIP Datacom Campus Network documents knowledge without any URL or Links:

In large- and medium-sized Huawei campus network admission designs, it is common for PCs to be connected downstream of IP phones. In such scenarios, both the IP phone and the PC share the same physical access port on the switch, but they have different authentication and service requirements.

To support this deployment model, Huawei recommends multi-mode authentication. Multi-mode authentication allows multiple authentication methods to coexist on the same interface. Typically, the IP phone uses MAC address authentication to quickly obtain voice service access, while the connected PC uses 802.1X authentication to obtain data network access. This ensures that voice and data services are securely and independently authenticated without requiring additional ports.

Portal authentication is mainly used for web-based access and is not suitable for chained device scenarios.

Pure 802.1X or MAC authentication alone cannot meet the requirement because they do not support differentiated authentication for multiple terminals behind a single interface.

According to HCIP Datacom Campus Network admission control guidelines, multi-mode authentication is the correct solution for PCs connected to IP phones, making option A correct.

NEW QUESTION # 242

Which of the following technologies can be used to isolate users in the same VLAN, enhance user communication security, and prevent invalid broadcast packets from affecting services?

- A. Port isolation
- B. Ethernet port security
- C. Super VLAN
- D. IPSG

Answer: A

NEW QUESTION # 243

In the OSPF protocol for wide area networks, which of the following is the core information contained in Type 2 LSA (Network LSA)?

- A. Prefix and next hop of external routes to the AS
- B. The DR router ID that generated this LSA and the IDs of all routers in the network.
- C. Prefixes and metrics for external routes within the NSSA area
- D. Prefix and metric of inter-area summary route

Answer: B

NEW QUESTION # 244

(On a virtualized network deployed using iMaster NCE-Campus, which of the following methods can be used by a network administrator during VN creation to create user network segments?)

- A. Manually create them one by one.
- B. Create them in a batch through automatic allocation.
- C. Directly invoke the user network segments in the global resource pool of the fabric.
- D. Import them in a batch using a template.

Answer: A,B,D

Explanation:

In iMaster NCE-Campus-based virtualized campus networks, user network segments are logical subnets created within a Virtual Network (VN) to provide Layer 2 or Layer 3 connectivity for users. HCIP Datacom Campus Network documentation describes multiple flexible methods for creating these network segments during VN deployment, allowing administrators to balance efficiency and control.

Administrators can manually create user network segments one by one, which is suitable for small-scale deployments or scenarios requiring precise customization of subnet parameters such as gateway address, VLAN, and IP pool. This method provides maximum control but is less efficient for large networks.

For medium- or large-scale deployments, batch import using templates is widely supported and recommended.

Templates allow administrators to define network segment parameters in advance and import multiple segments at once, significantly improving deployment efficiency and reducing configuration errors.

Another supported method is automatic batch allocation, where iMaster NCE-Campus automatically allocates VNIs, VLANs, and IP resources from predefined resource pools. This method is commonly used in VXLAN Fabric deployments and enables fast, standardized VN provisioning with minimal manual input.

However, directly invoking user network segments from the global fabric resource pool is not supported during VN creation. The global resource pool is used for automatic allocation reference but does not allow direct binding of pre-created segments to a VN. Therefore, the valid methods are manual creation, template-based batch import, and automatic batch allocation, making options A, B, and D correct.

NEW QUESTION # 245

(DHCP snooping is a security feature of DHCP that prevents DHCP servers and clients from being attacked. Which of the following statements about DHCP snooping are true? Choose all that apply.)

- A. The device discards messages, such as DHCP ACK and DHCP Offer messages, received on untrusted interfaces from a DHCP server.
- B. After DHCP snooping is enabled on a switch, you need to configure the interface that receives DHCP messages from a DHCP server as a trusted interface.
- C. When the interface directly connected to a DHCP client goes Down, the corresponding DHCP snooping entry does not disappear until the IP address lease of the DHCP client expires.
- D. A DHCP snooping-enabled device listens to DHCP messages and records client information obtained from DHCP Offer messages.

Answer: A,B

Explanation:

Comprehensive and Detailed 200 to 250 words of Explanation From HCIP Datacom Campus Network documents knowledge without any URL or Links:

DHCP snooping works by distinguishing trusted and untrusted interfaces and controlling DHCP message forwarding behavior. After DHCP snooping is enabled, interfaces connected to legal DHCP servers must be explicitly configured as trusted interfaces, otherwise DHCP server messages will be blocked. Therefore, statement B is correct.

On untrusted interfaces, the switch drops DHCP server-type messages, such as DHCP Offer and DHCP ACK, to prevent rogue DHCP servers from assigning incorrect IP addresses. This validates statement C as correct.

Statement A is incorrect because DHCP snooping records client binding information mainly from DHCP ACK messages, not from DHCP Offer messages. The ACK confirms the final IP assignment and lease parameters, making it the authoritative source for the binding table.

Statement D is also incorrect. When the interface connected to a DHCP client goes down, the corresponding DHCP snooping entry is immediately removed, rather than waiting for the lease to expire. This ensures real-time accuracy of the binding table.

NEW QUESTION # 246

.....

If you don't have enough time to study for your certification exam, Actual4test provides HCIP-Datacom-Campus Network Planning and Deployment V1.5 H12-841_V1.5 PDF Questions. You may quickly download HCIP-Datacom-Campus Network Planning and Deployment V1.5 H12-841_V1.5 exam questions in PDF format on your smartphone, tablet, or desktop. You can Print Huawei pdf questions and answers on paper and make them portable so you can study on your own time and carry them wherever you go.
