Our COF-C03 preparation exam have assembled a team of professional experts incorporating domestic and overseas experts and scholars to research and design related exam bank, committing great efforts to work for our candidates. Most of the experts have

been studying in the professional field for many years and have accumulated much experience in our COF-C03 Practice Questions. The high-quality of our COF-C03 exam questions are praised by tens of thousands of our customers. You may try it!

## **Snowflake SnowPro® Core Certification (COF-C03) Sample Questions (Q351-Q356):**

### **NEW QUESTION # 351**

Which Snowflake feature allows a user to substitute a randomly generated identifier for sensitive data, in order to prevent unauthorized users access to the data, before loading it into Snowflake?

- A. User-Defined Table Functions (UDTF)
- B. Materialized Views
- C. External Tables
- **D. External Tokenization**

**Answer: D**

Explanation:

The feature in Snowflake that allows a user to substitute a randomly generated identifier for sensitive data before loading it into Snowflake is known as External Tokenization. This process helps to secure sensitive data by ensuring that it is not exposed in its original form, thus preventing unauthorized access.

### **NEW QUESTION # 352**

Which of the following commands cannot be used within a reader account?

- A. DESCRIBE TABLE
- B. ALTER WAREHOUSE
- C. DROP ROLE
- D. SHOW SCHEMAS
- **E. CREATE SHARE**

**Answer: E**

Explanation:

In Snowflake, a reader account is a type of account that is intended for consuming shared data rather than performing any data management or DDL operations. The CREATE SHARE command is used to share data from your account with another account, which is not a capability provided to reader accounts. Reader accounts are typically restricted from creating shares, as their primary purpose is to read shared data rather than to share it themselves.

### **NEW QUESTION # 353**

Which URL type allows users to access unstructured data without authenticating into Snowflake or passing an authorization token?

- A. File URL
- B. Scoped URL
- **C. Pre-signed URL**
- D. Signed URL

**Answer: C**

Explanation:

Pre-signed URLs in Snowflake allow users to access unstructured data without the need for authentication into Snowflake or passing an authorization token. These URLs are open and can be directly accessed or downloaded by any user or application, making them ideal for business intelligence applications or reporting tools that need to display unstructured file contents.

### NEW QUESTION # 354

A running virtual warehouse is suspended.

What is the MINIMUM amount of time that the warehouse will incur charges for when it is restarted?

- A. 60 minutes
- B. 5 minutes
- C. 60 seconds
- D. 1 second

**Answer: C**

Explanation:

When a running virtual warehouse in Snowflake is suspended and then restarted, the minimum amount of time it will incur charges for is 60 seconds.

### NEW QUESTION # 355

What are valid sub-clauses to the OVER clause for a window function? (Select TWO).

- A. GROUP BY
- B. ORDER BY
- C. UNION ALL
- D. PARTITION BY
- E. LIMIT

**Answer: B,D**

Explanation:

Valid sub-clauses to the OVER clause for a window function in SQL are:

C . ORDER BY: This clause specifies the order in which the rows in a partition are processed by the window function. It is essential for functions that depend on the row order, such as ranking functions.

D . PARTITION BY: This clause divides the result set into partitions to which the window function is applied. Each partition is processed independently of other partitions, making it crucial for functions that compute values across sets of rows that share common characteristics.

These clauses are fundamental to defining the scope and order of data over which the window function operates, enabling complex analytical computations within SQL queries.
