VMware Cloud Management and Automation Advanced Design Sample Questions (Q85-Q90):

NEW QUESTION # 85

What type of requirement defines the specific technical specifications, such as hardware and software choices?

- A. Business requirements
- B. Security requirements
- C. Functional requirements
- **D. Non-functional requirements**

Answer: D

NEW QUESTION # 86

An architect is designing a VMware Cloud Management solution with the following requirements:

The solution should allow the deployment of production and development workloads to the same vSphere cluster.

The solution must deploy only the correctly licensed vSphere template for production workloads.

Which design decision will ensure that the requirements are met?

- **A. Assign the appropriate VMware Aria Automation Capability tag to the Production image mapping.**
- B. Assign the appropriate VMware Aria Automation Capability tag to the Production Cloud Zone.
- C. Assign the appropriate vSphere tag to the Production Virtual Machine (VM) template in VMware vCenter.
- D. Assign the appropriate vSphere Tag to create dynamic Cloud Zone Membership.

Answer: A

Explanation:

Assigning a VMware Aria Automation Capability tag to the Production image mapping ensures that only the correctly licensed vSphere template is selectable and deployed for production workloads, while allowing other templates for development. This design enforces template compliance within the shared vSphere cluster.

NEW QUESTION # 87

An Internet Service Provider requires the use of vRealize Automation to create blueprints and application services. It must catalog the blueprints once and share across multiple tenants in order to maintain standards and avoid rework.

Which statement is true about blueprints and application services?

- A. Blueprints and application services CANNOT be shared across tenants.
- B. Application services can be shared across tenants, but blueprints CANNOT be shared.
- **C. Blueprints and application services can be shared across tenants.**
- D. Blueprints CANNOT be shared across tenants, but application services can be shared.

Answer: C

NEW QUESTION # 88

After an organization completed an audit of their vSphere environment, they found that virtual machine deployments weren't consistent. They weren't using appropriate vSphere tags, resulting in confusion around who owned what virtual machines. Going forward Aria Automation has been chosen to bring consistency to their deployments and day two management. The organization wants to make sure the resources of each department are tagged appropriately.

Which two options will meet the technical requirements? (Choose two.)

- **A. Create a project for each department**
- B. Create a single project for all departments
- **C. Set resource tags in every project**
- D. Apply tags manually after deployment
- E. Set capability tags in cloud zone
