

Process-Automation Test Vce - Process-Automation Boot Camp

guides and the books that are detailed and suitable for building knowledge from ground up then there are video tutorial and lectures that can somehow ease the pain of through study and are comparatively less boring for some candidates yet these demand time and concentration from the learner. Smart Candidates who want to build a solid foundation in all exam topics and related technologies usually combine video lectures with study guides to reap the benefits of both but there is one crucial preparation tool as often overlooked by most candidates the practice exams. Practice exams are built to make students comfortable with the real exam environment. Statistics have shown that most students fail not due to that preparation but due to exam anxiety the fear of the unknown. 2Pass4sure expert team recommends you to prepare some notes on these topics along with it don't forget to practice 6210 Exam exam dumps which been written by our expert team, Both these will help you a lot to clear this exam with good marks.

Do you want to be one of them? Let our products to help you.

Salesforce Process Automation Accredited Professional Sample Questions (Q51-Q56):

NEW QUESTION # 51

Dreamscape Flowers is looking to automate a complex business process that involves multiple users from various departments. The Administrator plans to use existing flows and orchestration. The Administrator is aware that some existing flows were created long ago, which might lead to errors during the implementation phase. In case of an error, what two things should the Administrator look for?

- **A. Error list under Orchestration Runs in Setup**
- B. A flow error email notification
- C. All events in Event Monitoring with the "salesforce-flow" prefix in the identifier
- **D. An orchestration error email notification**

Answer: A,D

NEW QUESTION # 52

Northern Trail Outfitters (NTO) is considering Flow Orchestration to automate several complex business processes for one of its departments. NTO has well-established deployment guidelines, and teams are expected to follow those guidelines when working with deployments. Which option should the Administrator keep in mind about deploying orchestrations?

- A. The Administrator can deploy orchestrations using "deploy orchestration API" option in workbench
- B. The Administrator will need to configure "Orchestration Deployment" certificate in each environment
- **C. The Administrator can deploy orchestrations using change sets**
- D. The Administrator can deploy active orchestrations only in production

Answer: C

Explanation:

Salesforce supports deploying Flow Orchestrations using Change Sets, Unlocked Packages, or Metadata API - just like other metadata components.

A). Correct - Flow Orchestrations can be deployed using change sets from one environment to another.

Incorrect Options:

B). You can deploy both active and inactive orchestrations, but deployment best practices recommend deploying inactive versions.

C). No such certificate or config is required for orchestration deployment.

D). There is no special "deploy orchestration API" in Workbench; standard metadata deployment tools apply.

Reference Extracts from Salesforce Process Automation Study Guide:

"Deploy Flow Orchestrations using change sets or metadata deployment tools just like other Flow assets."

"Orchestrations can be migrated between sandboxes and production environments."

NEW QUESTION # 53

A Salesforce Administrator wants to display an error message if a flow fails for the running user. How would the Administrator configure this in a Flow?

- A. Download an App from the AppExchange.
- B. Use conditional highlighting to display text if the Flow has failed.
- **C. Use the fault path to display the error and draw the fault connector to a Screen element with Display Text field.**
- D. Select uncategorized under Actions to configure a pop-up.

Answer: C

Explanation:

In Flow Builder, administrators can use a fault path (fault connector) from a flow element (such as Create or Update Records) to a Screen element. This screen can include a Display Text component with an error message for the user.

D). Correct - This is the standard approach to handle errors gracefully in Screen Flows.

Incorrect Options:

A). Conditional highlighting is not a supported feature in Flow Screens.

B). "Uncategorized under Actions " does not exist in Flow Builder.

C). AppExchange apps are unnecessary for basic error handling.

Reference Extracts from Salesforce Process Automation Study Guide:

"Use a fault connector to direct the flow to a screen that explains the error to the user."

"Fault paths allow for graceful handling of errors, including user-friendly messages."

NEW QUESTION # 54

Which three statements are correct regarding Flow Interviews?

- **A. Any flow interviews not in use should be deleted so that the user 's pending list includes only interviews they still plan to act on.**
- B. Users can navigate through a flow through the browser 's Back or Forward buttons.
- C. Only those flow interviews can be deactivated that have been paused at least once.
- **D. A flow interview always runs a single instance of a flow.**
- **E. A single flow can have up to 50 different versions.**

Answer: A,D,E

Explanation:

Flow Interviews are individual executions of flows and each has its own runtime context and data.

A). Correct - Every flow execution creates a distinct flow interview.

C). Correct - Salesforce allows up to 50 active versions of a flow. While only one can be set as active, others can exist.

E). Correct - Deleting unused interviews reduces clutter and keeps the user experience clean.

Incorrect Options:

B). Incorrect - Browser back/forward navigation does not control flow screen navigation. Navigation is governed within the flow's logic and element structure.

D). Incorrect - All flow interviews, whether paused or not, can be deleted administratively; deactivation applies to flows, not interviews.

Reference Extracts from Salesforce Process Automation Study Guide:

"Each time a flow runs, it creates a unique interview."

"Salesforce supports up to 50 versions of a flow."

"Deleting paused or unused interviews can help users focus only on relevant, actionable flows."

NEW QUESTION # 55

What are the two key considerations in integrating External Services in flows?

- **A. There is a limit on the number of External Service registrations per org.**
- **B. OpenAPI 2.0 schema, YAML format is supported**
- C. OpenAPI 1.0 JSON schema format is supported
- D. External Services cannot be edited from within a flow.

Answer: A,B

Explanation:

Salesforce External Services must be registered using an OpenAPI 2.0 schema (either in JSON or YAML format). Once registered, they appear in Flow Builder as invocable actions. There is also a known limit to the number of External Services that can be registered per org (e.g., 50).

B). Correct - OpenAPI 2.0 in JSON or YAML format is supported.

D). Correct - Limits apply per org for registered external services.

Incorrect Options:

A). Once registered, services can be used like other actions in Flow and modified within Flow Builder.

C). OpenAPI 1.0 is not supported.

Reference Extracts from Salesforce Process Automation Study Guide:

"External Services must use OpenAPI 2.0 schema and support both JSON and YAML formats."

"There is an org limit for the number of external service registrations."

NEW QUESTION # 56

.....
