You don't have to worry about passing rates of our 220-1101 exam questions because of the short learning time. We have always

been trying to shorten your study time on the premise of ensuring the passing rate. Perhaps after you have used 220-1101 real exam once, you will agree with this point. Our 220-1101 Study Materials are really a time-saving and high-quality product! As long as you buy and try our 220-1101 practice braindumps, then you will want to buy more exam materials.

Core 1 covers the foundational knowledge and skills necessary for an IT professional to install, configure, and maintain hardware and software systems. It includes topics such as computer hardware, operating systems, networking, mobile devices, and troubleshooting. 220-1101 Exam contains a maximum of 90 questions that need to be answered in 90 minutes. The passing score for the exam is 675 out of 900.

## CompTIA A+ Certification Exam: Core 1 Sample Questions (Q322-Q327):

### NEW QUESTION # 322

A technician is installing a USB Wi-Fi card. Which of the following would be the MOST appropriate way for the technician to receive the latest official drivers for the device?

- A. Allow the OS to install the drivers automatically.
- B. Run the autoinstall CD.
- **C. Download the drivers from the vendor's website.**
- D. Utilize a third-party, non-OEM driver.

**Answer: C**

Explanation:

The most appropriate way for the technician to receive the latest official drivers for a USB Wi-Fi card is to download them from the vendor's website. This ensures that the drivers are compatible, updated, and secure. Allowing the OS to install the drivers automatically may not provide the latest or best drivers for the device. Utilizing a third-party, non-OEM driver could cause compatibility or security issues. Running the autoinstall CD could install outdated or unnecessary software along with the drivers

### NEW QUESTION # 323

A user reports poor performance on the application server.

INSTRUCTIONS

Click on Server 1 and Server 2 and review the information presented in each chart to determine which drives need to be replaced.

Select the appropriate replacement drive that should be used, for the least performance degradation to the server.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

**Answer:**

Explanation:

See the detailed solution in explanation below.

Explanation:

The degraded status on Server 2 indicates a RAID-5 issue, typically due to a failed or failing drive. In RAID-5 configurations, when one drive fails, the system can still operate but with reduced performance as parity data is used to rebuild missing data on-the-fly.

Recommended Replacement Drive: To minimize performance degradation, the replacement drive should be:

\* SAS HDD with the same specifications (64KB stripe size, no read-ahead, and write-back policy).

\* Matching the configuration exactly ensures seamless integration and optimizes recovery speed in the RAID-5 array.

In RAID-5, degraded performance is expected when one drive fails, as parity data needs to rebuild missing information during each read/write process. Replacing the failed drive restores the RAID array to optimal status, reducing the load on existing drives and returning the system to normal read/write performance. The write-back policy and disabled disk cache settings are designed to reduce latency and increase efficiency, essential for handling real-time applications.

A user reports poor performance on the application server.

INSTRUCTIONS

Click on Server 1 and Server 2 and review

the information presented in each chart to

determine which drives need to be replaced.

Select the appropriate replacement drive

that should be used, for the least

performance degradation to the server.

#### NEW QUESTION # 325

A help desk technician has been tasked with installing an IP phone in a small office with an unmanaged switch. When connected to an RJ45 receptacle, the phone does not boot. Which of the following is the QUICKEST way to resolve this issue?

- A. Install a PoE injector.
- B. Replace the phone.
- C. Upgrade the Ethernet cable to the latest specification.
- D. Change ports on the switch.

**Answer: A**

Explanation:

<https://intellinetnetwork.eu/pages/what-is-a-poe-injector>

The quickest way to resolve the issue is to install a Power over Ethernet (PoE) injector to provide power to the IP phone. An unmanaged switch does not provide PoE, so an injector is needed to power the phone.

#### NEW QUESTION # 326

A technician is setting up a new desktop computer and will be installing the hard drive directly on the motherboard without using cables to connect it. Which of the following will the technician be installing?

- A. M.2
- B. Thunderbolt
- C. eSATA
- D. SCSI

**Answer: A**
