The talent is everywhere in modern society. This is doubly true for IT field. With the popularity of the computer, hardly anyone can't use a computer. Working in the IT industry, don't you feel pressure? Educational level is not representative of your strength. Education is just a ticket, however really keeping your status is your strength. As IT staff, how to cultivate your strength? It is a good choice to take IT certification test which can not only help you master more skills, also can get the certificate to prove your ability. Do you want to take USGBC LEED-AP-BD-C Exam that is very popular in recent?

USGBC LEED-AP-BD-C Exam Syllabus Topics:

Topic	Details
Topic 1	• Building Loads: This topic is focused on optimizing building performances through effective load management. It addresses design considerations such as building orientation and glazing selection while clarifying regional factors that influence these decisions.
Topic 2	• Integrative Strategies: It emphasizes the importance of an integrative process. The topic also covers their knowledge about the value of teamwork in developing integrative green strategies and how they can collaborate throughout different project phases.
Topic 3	• Water Efficiency: This topic measures the skills of LEED Green Associates in optimizing water use in building projects. It explores strategies for reducing outdoor water use through efficient irrigation practices, including landscape water requirements and irrigation systems. It also covers using native and adaptive plant species to minimize irrigation demands.
Topic 4	• LEED Process: This topic tests the skills of LEED Green Associates involved in green building initiatives. It focuses on various methods to achieve LEED goals, such as developing credit interpretation rulings and utilizing Regional Priority Credits to explore synergies within the LEED system.
Topic 5	• Sustainable Sites: It covers site assessment and planning that involves evaluating various site characteristics, such as topography, hydrology, climate, vegetation, and soil conditions. It also covers assessing a site's potential as a resource for energy flows while addressing construction activity pollution prevention measures.
Topic 6	• Location and Transportation: This topic measures the skills of LEED Green Associates in sustainable development. It addresses critical factors in site selection, including development constraints and opportunities related to environmental considerations, and community connectivity concepts, such as walkability and street design, which are vital for promoting sustainable transportation options.

Topic 7	• Project Surroundings and Public Outreach: LEED Green Associates learn about promoting sustainable practices, regional design considerations that incorporate green construction measures, cultural awareness issues related to historic or heritage impacts, and ensuring that sustainability efforts are respectful of local values.
Topic 8	• Energy and Atmosphere: In this topic, LEED Green Associates focuses on building reuse, including historic building renovations. It covers material reuse strategies, enclosure materials, and permanently installed interior components into new designs.
Topic 9	• Indoor Environmental Quality: This domain measures the skills of LEED Green Associates in creating healthy indoor environments. It emphasizes the importance of maintaining adequate ventilation levels through both natural and mechanical means. Additionally, candidates will be assessed on topics such as tobacco smoke control measures.

USGBC LEED-AP-BD-C Exam is Easy with Our Verified LEED-AP-BD-C New Study Materials: LEED AP Building Design + Construction (LEED AP BD+C)

Our company abides by the industry norm all the time. By virtue of the help from professional experts, who are conversant with the regular exam questions of our latest LEED-AP-BD-C exam torrent we are dependable just like our LEED-AP-BD-C test prep. They can satisfy your knowledge-thirsty minds. And our LEED-AP-BD-C Quiz torrent is quality guaranteed. By devoting ourselves to providing high-quality practice materials to our customers all these years we can guarantee all content is of the essential part to practice and remember.

USGBC LEED AP Building Design + Construction (LEED AP BD+C) Sample Questions (Q380-Q385):

NEW QUESTION # 380

A construction manager is looking for a project management tool that offers energy management strategies, benchmarking software tools for buildings, and product procurement guidelines. Which of the following is recognized by U.S. Green Building Council to assist them?

- A. SCAQMD
- B. Green Seal
- C. SMACNA
- D. ENERGY STAR®

Answer: D

Explanation:

ENERGY STAR® (C) provides tools recognized by the U.S. Green Building Council (USGBC) that assist with energy management strategies, benchmarking, and procurement guidelines. ENERGY STAR offers resources for energy performance benchmarking, operational efficiency, and product standards, which help project managers optimize energy use in line with LEED requirements. Green Seal (A) and SCAQMD (B) focus on materials and emissions, while SMACNA (D) provides guidelines for air quality management.

NEW QUESTION # 381

Discussing the project goals to help identify the credits and options that the team should attempt is an example of

- A. developing the LEED Scorecard
- B. documenting LEED credits
- C. implementing the Commissioning (Cx) Plan
- D. creating the Basis of Design (BOD)

Answer: A

Explanation:

Explanation

Discussing the project goals to help identify the credits and options that the team should attempt is an example of developing the LEED Scorecard. The LEED Scorecard is a tool that shows the potential points that a project can achieve under each credit category of the LEED rating system¹. Developing the LEED Scorecard involves selecting the most appropriate credits and options based on the project's goals, location, budget, and design².

The scorecard helps the project team track their progress and prioritize their actions throughout the design and construction process¹. References LEED scorecard | U.S. Green Building Council LEED v4: Building Design + Construction Guide - U.S. Green Building Council

NEW QUESTION # 382

If a commercial building is considered to have 100 peak visitors in a day, what is the minimum number of short-term bicycle storage spaces that must be provided to earn one point under Location and Transportation Credit, Bicycle Facilities?

- A. Three
- B. Four
- **C. Five**
- D. Ten

Answer: C

Explanation:

According to the LEED v4: Building Design + Construction Guide, the Location and Transportation Credit, Bicycle Facilities has two options: Option 1. Bicycle Network and Storage and Option 2. Reduced Parking Footprint. Option 1 requires the project to provide short-term bicycle storage for at least 2.5% of all peak visitors, and long-term bicycle storage for at least 5% of all regular building occupants. Short-term bicycle storage must be within 100 ft (30 m) walking distance of any main entrance, and long-term bicycle storage must be within 300 ft (90 m) walking or bicycling distance of any functional entry. Option 2 requires the project to provide short-term bicycle storage for at least 2.5% of all peak visitors, and long-term bicycle storage for at least 5% of all regular building occupants, and also reduce the total parking capacity by at least 20% from the base ratios. Both options can earn one point under this credit¹.

If a commercial building is considered to have 100 peak visitors in a day, the minimum number of short-term bicycle storage spaces that must be provided to earn one point under Option 1 or Option 2 is 2.5% of 100, which is 2.5, rounded up to 3. However, the project must also provide long-term bicycle storage for at least 5% of all regular building occupants, which is not given in the question. Therefore, the correct answer is C, five, which is the minimum number of short-term bicycle storage spaces that must be provided to earn one point under Option 1 or Option 2, regardless of the number of regular building occupants. Reference: LEED v4: Building Design + Construction Guide, Location and Transportation Credit, Bicycle Facilities, Requirements¹

NEW QUESTION # 383

In order for a product to contribute to Materials and Resources Credit, Building Product Disclosure and Optimization, Environmental Product Declarations, Option 1. Environmental Product Declaration, the product needs to be

- **A. critically reviewed life-cycle assessment conforming to ISO 14044**
- B. third-party verified in a Corporate Sustainability Report (CSR)
- C. cradle-to-cradle certified
- D. Forest Stewardship Council (FSC)-certified

Answer: A

Explanation:

The correct answer is D. critically reviewed life-cycle assessment conforming to ISO 14044. This is because:

*Option 1 of this credit requires the use of products that have environmental product declarations (EPDs), which are documents that provide information about the environmental impact of a product throughout its life cycle¹.

*EPDs are based on life-cycle assessments (LCAs), which are systematic analyses of the environmental aspects and potential impacts of a product from raw material extraction to disposal².

*LCAs must conform to the international standard ISO 14044, which specifies the principles and framework for conducting and reporting LCAs³. LCAs must also be critically reviewed by an independent panel of experts to ensure their validity and reliability⁴.

*The other options are not relevant for this credit. FSC certification is a label that indicates that a wood product comes from a well-

managed forest⁵. Cradle-to-cradle certification is a label that indicates that a product is designed for circular economy, with minimal waste and toxicity. CSR is a report that discloses the social and environmental performance of a company.

NEW QUESTION # 384

Which individual occupant lighting control meets the requirements of Indoor Environmental Quality Credit, Interior Lighting?

- A. Three Level (on, 50%, off)
- **B. Three Level (on, 25%, off)**
- C. Two Level (on, off)
- D. Three Level (on, 75%, off)

Answer: B

Explanation:

The Indoor Environmental Quality Credit, Interior Lighting, requires the project team to provide individual occupant lighting control for at least 90% of the individual occupant spaces, or at least 50% of the shared multi-occupant spaces. The lighting control must enable occupants to adjust the lighting to suit their individual tasks and preferences, and must have at least three lighting levels, excluding off. Therefore, a three level (on, 25%, off) lighting control meets the requirements of this credit, while a two level (on, off) lighting control does not. A three level (on, 50%, off) or a three level (on, 75%, off) lighting control may also meet the requirements, depending on the lighting power density and the daylight availability in the space².
