SAP C_S4CPB_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of SAP Cloud ERP Consultant and focuses on setting up system configurations in SAP Cloud ERP and understanding how to manage user navigation and interface personalization through the SAP Fiori Launchpad. It tests the consultant's ability to configure and align user experience with business roles.
Topic 2	<ul style="list-style-type: none"> • Extensibility and Integration: This section of the exam measures skills of SAP Cloud ERP Consultant and deals with the capabilities of extending SAP applications to meet custom business requirements and integrating with other systems or services. The focus is on knowing when to extend standard functionality and how to ensure smooth system integration in a cloud context.
Topic 3	<ul style="list-style-type: none"> • Introduction to Cloud Computing and SAP Cloud ERP Basics: This section of the exam measures skills of ERP Implementation Project Manager and assesses foundational knowledge of cloud computing principles and SAP Cloud ERP structure. It ensures understanding of key differences from on-premise ERP, cloud deployment benefits, and basic navigation of cloud ERP systems.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q51-Q56):

NEW QUESTION # 51

What provides a foundation for the SAP Cloud ERP where integrations and extensions live?

- A. SAP Business Accelerator Hub
- B. SAP Discovery Center
- C. SAP Business Technology Platform
- D. SAP ABAP Environment

Answer: C

NEW QUESTION # 52

Where do you find industry cloud solutions to address a customer's unique requirement?

- A. SAP Discovery Center
- B. SAP Signavio Process Navigator
- C. SAP Business Technology Platform
- D. SAP Store

Answer: C

NEW QUESTION # 53

You are using the Test Automation Tool. When do you define a data variant?

- A. After creating a test plan.
- B. After binding a process step field to a Test Data Container.
- C. After customizing a test process.
- D. After providing consent for Post-Upgrade Testing.

Answer: C

Explanation:

A data variant is a set of data values that can be used to execute a test process in the Test Automation Tool.

You can define multiple data variants for a test process to test different scenarios with different input data. You can also use data variants to parameterize your test process and reuse it for different test cases¹.

You define a data variant after binding a process step field to a Test Data Container. A Test Data Container is a reusable object that stores test data for a specific field or parameter. You can create and manage Test Data Containers in the Manage Test Data app.

You can bind a process step field to a Test Data Container by selecting the field in the Test Automation Tool and choosing the Test

Data Container from the list. This will create a link between the field and the Test Data Container, allowing you to use the data stored in the Test Data Container for the field².

After binding a process step field to a Test Data Container, you can define a data variant by selecting the Test Data Container and choosing the Data Variant option. This will open a dialog where you can enter the data values for the data variant. You can also specify a name and a description for the data variant. You can create as many data variants as you need for a Test Data Container². Therefore, the correct answer is B, as you define a data variant after binding a process step field to a Test Data Container.

References = 1 Test Automation Tool - SAP Help Portal 2 Test Data Containers - SAP Help Portal In the context of using the Test Automation Tool within SAP S/4HANA Cloud Public Edition, defining a data variant is a crucial step. This step occurs:

* After binding a process step field to a Test Data Container: A Test Data Container (TDC) is used to store data that can be reused across multiple test cases. When a field in a process step is bound to a TDC, it means that the test case will use the data specified within the TDC. After this binding, a data variant can be defined to specify different sets of data or conditions under which the test case should be executed. This allows for more flexible and comprehensive testing scenarios, ensuring that the application behaves as expected under various conditions.

NEW QUESTION # 54

If you cannot find a prepackaged solution process that addresses integration requirements in SAP Signavio Process Navigator, where do you look next?

- A. SAP Discovery Center
- B. SAP Cloud ALM
- C. SAP Business Accelerator Hub
- D. SAP Business Technology Platform

Answer: C

Explanation:

If you cannot find a prepackaged solution process that addresses integration requirements in SAP Signavio Process Navigator, you should look next at the SAP Business Accelerator Hub. The SAP Business Accelerator Hub is a central repository of integration content that can help you to connect SAP S/4HANA Cloud Public Edition with other SAP and non-SAP applications. You can browse, search, and filter the available integration packages, scenarios, and APIs, and access the relevant documentation and configuration guides¹. The SAP Business Accelerator Hub also provides links to the SAP Integration Suite tools, such as SAP Cloud Integration, SAP API Management, and SAP Cloud Integration Automation Service, that you can use to implement and manage the integrations².

The other options are not the correct places to look for integration requirements. SAP Discovery Center is a portal that helps you to discover, try, and buy SAP solutions and services³. SAP Business Technology Platform is a platform that enables you to extend, integrate, and build applications in the cloud⁴. SAP Cloud ALM is a cloud-based application lifecycle management tool that supports you in implementing, operating, and enhancing your cloud solutions⁵. References = SAP Business Accelerator Hub, SAP S/4HANA Cloud Public Edition - Integration, SAP Discovery Center, SAP Business Technology Platform, SAP Cloud ALM.

NEW QUESTION # 55

You are recording actions for a custom process step in a test automate

When do you press the "Read" button on the recording panel? Note: There are 2 correct answers to this question.

- A. To capture a value in a text field that should be stored as a variable.
- B. To capture an error message on the screen that can be used later.
- C. To capture a static label on the screen that should be checked during test execution.
- D. To capture text in a message screen that can be used for data binding later.

Answer: A,D

Explanation:

When you are recording actions for a custom process step in a test automate, you press the "Read" button on the recording panel in the following situations:

* To capture a value in a text field that should be stored as a variable. This allows you to reuse the value in other steps or test cases, or to compare it with an expected value¹.

* To capture text in a message screen that can be used for data binding later. This allows you to extract data from the message screen and use it as an input for another step or test case².

You do not press the "Read" button to capture an error message or a static label on the screen, as these are not values that need to be stored or used later. Instead, you can use the "Check" button to verify that the error message or the label is displayed as

expected3. References = Using the Test Automation Tool for Automated Testing - SAP Learning, How to get started with the Test Automation Tool for SAP S/4HANA Cloud Public Edition, SAP S/4HANA Cloud Test Automation Tool- FAQs Blog Series #1.
