NCLEX-RN, or National Council Licensure Examination for Registered Nurses, is a standardized exam that is used to determine whether or not a candidate is qualified to become a licensed registered nurse. NCLEX-RN exam is administered by the National Council of State Boards of Nursing (NCSBN) and is accepted by all state boards of nursing in the United States and its territories. The NCLEX-RN is designed to assess a candidate's knowledge, skills, and abilities in a variety of areas related to nursing practice, including patient care, safety, and ethical considerations.

Preparing for the NCLEX-RN exam requires a significant amount of time, effort, and dedication. Candidates must have a thorough understanding of nursing concepts and principles, as well as strong critical thinking and problem-solving skills. Many nursing schools offer review courses and study materials to help students prepare for the exam. Passing the NCLEX-RN exam is a major milestone in a nurse's career and opens up many opportunities for professional growth and advancement.

NCLEX-RN exam is an essential step in the process of becoming a registered nurse. Passing NCLEX-RN Exam is a requirement for licensure in the United States and Canada. NCLEX-RN exam is administered by the National Council of State Boards of Nursing (NCSBN) and is designed to ensure that nurses meet the minimum competency standards necessary to provide safe and effective nursing care.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q591-Q596):

NEW QUESTION # 591

A client is admitted to the labor room. She is dilated 4 cm. She is placed on electric fetal monitoring. Which of the following observations necessitates notifying the physician?

- A. Fetal heart decelerations at the beginning of contractions

- B. Contractions every 2 minutes, lasting 100 seconds
- C. Fetal heart decelerations during a contraction
- D. Beat-to-beat variability between contractions

Answer: B

Explanation:

Explanation/Reference:

Explanation:

(A) These are tetanic in nature and can cause rupture of the uterus. (B) The FHR decreases during contractions owing to vasoconstriction and should recover after the contraction. (C) Beat-to-beat variability is a normal finding and demonstrates fetal well-being. (D) The FHR may decrease at the beginning of a contraction owing to head compression.

NEW QUESTION # 592

Which of the following should the nurse anticipate receiving as an as-needed order for a postoperative carotid endarterectomy client?

- A. Nitroglycerin gr 1/150 for chest pain
- B. Magnesium salicylate to decrease inflammation
- C. Nifedipine 10 mg SL for B/P 140/90
- D. Furosemide 20 mg/PO for decreased urine output

Answer: C

Explanation:

(A) It is important to maintain a normal to slightly lower pressure to prevent the graft from blowing and excessive pressure to surgical vascular areas. (B, C, D) None of these drugs is related to managing the problem at hand. Also, none of the problems for which these drugs would be indicated is expected with this type of surgery, except if there is a prior history.

NEW QUESTION # 593

A postoperative prostatectomy client is preparing for discharge from the hospital the next morning. The nurse realizes that additional instructions are necessary when he states:

- A. "If I drink 10 to 12 glasses of fluids each day, that will help to prevent any clot formation in my urine."
- B. "If I feel as though I have developed a fever, I will take a rectal temperature, which is the most accurate."
- C. "I do not plan to do any heavy lifting until I visit my doctor again."
- D. "The isometric exercises will help to strengthen my perineal muscles and help me control my urine."

Answer: B

Explanation:

Explanation/Reference:

Explanation:

(A) This is correct health teaching. Drinking 10-12 glasses of clear liquid will help increase urine volumes and prevent clot formation. (B) This is correct health teaching. These types of exercises are prescribed by physicians to assist postprostatectomy clients to strengthen their perineal muscles. (C) This action is not recommended post-TURP because of the close proximity of the prostate and rectum. (D) This is correct healthcare teaching. The client should limit walking long distances, lifting heavy objects, or driving a car until these activities are cleared by the physician at the first office visit.

NEW QUESTION # 594

Endotracheal tube cuff pressure should never exceed:

- A. 60 mm Hg
- B. 20 mm Hg
- C. 45 mm Hg
- D. 10 mm Hg

Answer: B

Explanation:

(A) Pressure < 10 mm Hg places the client at risk for aspiration. (B) Pressure in the endotracheal tube cuff should never exceed 20 mm Hg, because higher pressure places the client at risk for tracheal erosion. (C) A pressure of 45 mm Hg is an extremely high pressure in the endotracheal tube cuff. This places the client at great risk for tracheal erosion. (D) A pressure of 60 mm Hg is an extremely high pressure in the endotracheal tube cuff. This places the client at great risk for tracheal erosion.

NEW QUESTION # 595

A female client at 30 weeks' gestation is brought into the emergency department after falling down a flight of stairs. On examination, the physician notes a rigid, boardlike abdomen; FHR in the 160s; and stable vital signs. Considering possible abdominal trauma, which obstetric emergency must be anticipated?

- A. Ectopic pregnancy
- B. Placenta previa
- C. Massive uterine rupture
- D. Abruptio placentae

Answer: D

Explanation:

Explanation

(A) Abruptio placentae, the complete or partial separation of the placenta from the uterine wall, can be caused by external trauma. When hemorrhage is concealed, one sign is a rapid increase in uterine size with rigidity.

(B) Ectopic pregnancy occurs when the embryo implants itself outside the uterine cavity. (C) Massive uterine rupture occurs during labor when the uterine contents are extruded through the uterine wall. It is usually due to weakness from a pre-existing uterine scar and trauma from instruments or an obstetrical intervention. (D) Placenta previa is the condition in which the placenta is implanted in the lower uterine segment and either completely or partially covers the cervical os.
