Actual4dump's study material is available in three different formats. The reason we have introduced three formats of the Certified Data Centre Professional (CDCP) (CDCP) practice material is to meet the learning needs of every student. Some candidates prefer CDCP practice exams and some want Real CDCP Questions due to a shortage of time. At Actual4dump, we meet the needs of both types of aspirants. We have EXIN CDCP PDF format, a web-based practice exam, and Certified Data Centre Professional (CDCP) (CDCP) desktop practice test software.

Propulsion occurs when using our CDCP practice materials. They can even broaden amplitude of your horizon in this line. Of course, knowledge will accrue to you from our CDCP practice materials. There is no inextricably problem within our CDCP practice materials. Motivated by them downloaded from our website, more than 98 percent of clients conquered the difficulties. All contents of CDCP practice materials are being explicit to make you have explicit understanding of this exam. Their contribution is praised for their purview is unlimited.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.
Topic 2	<ul style="list-style-type: none"> Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 3	<ul style="list-style-type: none"> Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).
Topic 4	<ul style="list-style-type: none"> Fire Safety Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.
Topic 5	<ul style="list-style-type: none"> Water Supply: This topic is all about water supply techniques and application areas.
Topic 6	<ul style="list-style-type: none"> Raised Floor Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 7	<ul style="list-style-type: none"> Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q60-Q65):

NEW QUESTION # 60

What is a disadvantage of a Dynamic UPS?

- A. They are heavy and more noisy.
- B. It needs additional cooling infrastructure as high temperatures reduces the lifetime of a Dynamic UPS.
- C. They are only available for small to medium sized data centres, due to their limited capacity of 200 kVA
- D. It needs a separate back-up generator as their autonomy time is less than 60 seconds.

Answer: A

NEW QUESTION # 61

When referring to the internal mounting space in racks, equipment manufacturers generally refer to standardized height of electronic modules "U" or "RU". What is the height of 1 "U" or "RU"?

- A. 19 inches (60 cm)
- B. 1.75 inches (4.445 cm)
- C. 3.5 inches (8.59 cm)
- D. 24 inches (80 cm)

Answer: B

Explanation:

According to the Certified Data Centre Professional (CDCP) Reference Materials, the height of 1 "U" (rack unit) or "RU" (rack unit) is standardized at 1.75 inches, which is equivalent to 44.45 millimeters or 4.445 centimeters. This unit of measurement is globally

used to define the internal mounting space in IT and telecommunications racks. Equipment manufacturers specify their devices' height based on how many "U" the device occupies (for example, a 2U server is 3.5 inches high). The standardization ensures interoperability and planning efficiency within the data center environment.

The "U" (rack unit) system is essential for ensuring that racks and equipment from different manufacturers will fit together properly, facilitating modularity, expansion, and maintenance. The 1.75-inch specification is defined by several industry standards including EIA-310 and is referenced directly in the EPI CDCP training and its official exam preparation guides.

NEW QUESTION # 62

What should be considered when implementing hot- or cold-aisle containment in an existing computer room?

- A. The delta-T of the equipment will increase too much causing reliability issues.
- B. Equipment will get too hot at the rear (back) of the rack potentially resulting in more ICT hardware failures.
- C. It will be more difficult to install power and network cabling in the contained area.
- **D. It creates potential issues with the existing fire suppression system(s).**

Answer: D

Explanation:

Hot- or cold-aisle containment is a strategy to improve the cooling efficiency and reduce the energy consumption of data centers by isolating the hot exhaust air from the cold supply air. However, implementing this strategy in an existing computer room may create potential issues with the existing fire suppression system(s), such as:

*The containment barriers may interfere with the distribution and activation of the fire suppression agents, such as water, gas, or aerosol, and reduce their effectiveness in extinguishing a fire.

*The containment barriers may create pockets of high temperature and pressure that could damage the equipment or the containment structure itself in the event of a fire.

*The containment barriers may obstruct the access and visibility of the fire detection and alarm devices, such as smoke detectors, heat sensors, or manual call points, and delay the response time of the fire suppression system(s).

*The containment barriers may violate the local fire codes and regulations that specify the minimum clearance and ventilation requirements for the data center.

Therefore, when implementing hot- or cold-aisle containment in an existing computer room, it is important to consider the impact on the existing fire suppression system(s) and take appropriate measures to ensure the safety and compliance of the data center, such as:

*Consulting with the fire authorities and the fire suppression system vendor to assess the compatibility and suitability of the containment solution with the existing fire suppression system(s).

*Modifying or upgrading the existing fire suppression system(s) to accommodate the containment solution, such as relocating or adding fire suppression devices, adjusting the discharge rate and pressure, or installing a secondary fire suppression system within the contained area.

*Installing fire-rated containment barriers that can withstand high temperatures and resist the spread of fire and smoke, and that have self-closing or automatic release mechanisms in case of a fire.

*Installing fire detection and alarm devices within the contained area and ensuring their proper integration and communication with the existing fire suppression system(s).

*Conducting regular testing and maintenance of the fire suppression system(s) and the containment solution to ensure their functionality and reliability.

NEW QUESTION # 63

The expected time to Recover/Repair from a system from a failure is defined as.

- A. MLBF
- B. MCBF
- **C. MTTR**
- D. MTBF

Answer: C

Explanation:

The expected time to recover or repair from a system from a failure is defined as MTTR (mean time to recovery or mean time to repair). MTTR is the average time it takes to restore a system or product to its normal operation after a failure. MTTR includes the time spent on detecting, diagnosing, and fixing the problem. MTTR is an important metric for measuring the reliability and availability of a system or product, as well as the efficiency and effectiveness of the incident management process. A lower MTTR indicates a faster and more reliable recovery or repair process.

NEW QUESTION # 64

Which one of the following is a Natural Disaster?

- A. Blackouts
- B. Grid Failure
- **C. Hurricanes**
- D. Human Error

Answer: C

Explanation:

According to the CDCP® Preparation Guide, a natural disaster is a catastrophic event that is caused by natural forces and has a significant impact on human lives, property, and environment. Hurricanes are examples of natural disasters, as they are powerful storms that form over warm ocean waters and produce strong winds, heavy rain, storm surges, and flooding. Grid failure, blackouts, and human error are not natural disasters, but rather man-made or technological disasters that result from failures or errors in human systems or activities.
