ISACAのCGEITの認定試験に合格すれば、就職機会が多くなります。MogiExamはISACAのCGEITの認定試験の受験生にとっても適合するサイトで、受験生に試験に関する情報を提供するだけでなく、試験の問題と解答をはっきり解説いたします。

ISACA Certified in the Governance of Enterprise IT Exam 認定 CGEIT 試験 問題 (Q185-Q190):

質問 # 185

Who is PRIMARILY accountable for delivering the benefits of an IT-enabled investment program to the enterprise?

- A. Program manager
- **B. Business sponsor**
- C. CIO
- D. IT steering committee chair

正解: B

解説:

According to the CGEIT certification guide, the business sponsor is primarily accountable for delivering the benefits of an IT-enabled investment program to the enterprise. The business sponsor is the person who has the authority and responsibility to initiate, influence and approve the business objectives and requirements of the program. The business sponsor also ensures that the program aligns with the enterprise strategy and delivers value to the enterprise¹. The program manager, the IT steering committee chair and the CIO are responsible for supporting the business sponsor in delivering the benefits, but they are not primarily accountable for them².

質問 # 186

Due to continually missed service level agreements (SLAs), an enterprise plans to terminate its contract with a vendor providing IT help desk services. The enterprise's IT department will assume the help desk-related responsibilities. Which of the following would BEST facilitate this transition?

- A. Ensuring IT will operate at a lower cost than the vendor
- **B. Ensuring a change management plan is in place**
- C. Validating that the balanced scorecard is still meaningful
- D. Requiring the enterprise architecture (EA) be updated

正解: B

解説:

Ensuring a change management plan is in place is the best way to facilitate the transition from a vendor providing IT help desk services to the enterprise's IT department, as it helps to define and implement the steps, activities, and resources needed to achieve the change objectives. A change management plan also helps to manage the risks, issues, and impacts of the change, and to communicate and coordinate with the stakeholders and staff involved in the change¹²³. References = CGEIT Exam Content Outline, Domain 1, Subtopic C: Technology Governance, Task 3: Ensure that IT processes are compliant with relevant laws, regulations and contractual requirements.

質問 # 187

To evaluate IT resource management, it is MOST important to define:

- A. IT resource utilization reporting procedures.
- **B. responsibilities for executing resource management.**

- C. applicable key goals.
- D. principles for the IT strategy.

正解: C

解説:

According to the CGEIT exam guide, IT resource management is the process of planning, acquiring, allocating, monitoring and optimizing the IT resources of an enterprise to support its strategy, objectives and goals. To evaluate IT resource management, it is most important to define the applicable key goals that the IT resources are expected to achieve or contribute to. These key goals should be aligned with the enterprise's vision, mission and values, as well as the stakeholder needs and expectations. The key goals should also be specific, measurable, achievable, relevant and time-bound (SMART), and should be communicated and agreed upon by all relevant parties. Defining the applicable key goals will help to assess the performance, value and impact of IT resource management, as well as to identify the gaps, issues and opportunities for improvement. The other options are not as important as defining the applicable key goals, as they are more related to the implementation and execution of IT resource management, rather than its evaluation. 質問 # 188

An IT steering committee is presented with an audit finding that new software applications are delivered on time but consistently have unacceptable levels of defects. Which of the following would be the BEST direction from the committee?

- A. Evaluate the change management process.
- B. Implement performance indicators.
- C. Establish code peer reviews.
- D. Evaluate the quality assurance process.

正解: D

解説:

The quality assurance process is the set of activities that ensures that the software development process follows the defined standards and meets the customer requirements. The quality assurance process includes planning, designing, executing, and monitoring the tests, as well as reporting and resolving the defects. Evaluating the quality assurance process can help to identify and improve the root causes of software defects, such as inadequate testing techniques, tools, or resources, poor communication or collaboration among stakeholders, or lack of quality control or feedback mechanisms¹²³. Software Quality Assurance | Components | Standards | Techniques - EDUCBA.

質問 # 189

An enterprise plans to migrate its applications and data to an external cloud environment. Which of the following should be the CIO's PRIMARY focus before the migration?

- A. Reviewing the information governance framework
- B. Conducting IT staff training to manage cloud workloads
- C. Updates the enterprise architecture (EA) repository
- D. Selecting best-of-breed cloud offerings

正解: A

解説:

Reviewing the information governance framework should be the CIO's primary focus before the migration, because it will help the CIO to ensure that the enterprise's data and applications are secure, compliant, and aligned with the business objectives and policies in the cloud environment. The information governance framework defines the roles, responsibilities, processes, standards, and metrics for managing information assets across the enterprise. It also covers aspects such as data classification, data quality, data protection, data retention, data sovereignty, and data privacy. By reviewing the information governance framework, the CIO can identify the requirements, risks, and gaps that need to be addressed before moving to the cloud. The other options are not as important as reviewing the information governance framework, because they are either dependent on or secondary to it. Selecting best-of-breed cloud offerings is a tactical decision that should be based on the information governance framework and the enterprise architecture. Updating the enterprise architecture repository is a good practice, but not a primary focus before the migration. It can be done after the migration to reflect the changes in the IT landscape. Conducting IT staff training to manage cloud workloads is a necessary step, but not a primary focus before the migration. It can be done in parallel with or after the migration to ensure that the

IT staff have the skills and knowledge to operate and optimize the cloud environment. Reference=[Migration environment planning checklist](#), [Practical Guide to Cloud Governance](#), [Governance or compliance strategy](#)
