EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q53-Q58):

NEW QUESTION # 53

Question:

Refer to the Exhibit (Port marked "X"): What type of FC port does the "X" represent?

- A. F_port
- B. N port
- C. NL port
- D. E_port

Answer: D

Explanation:

The exhibit shows a Fibre Channel (FC) switch connected to another FC switch. The port "X" is used for inter-switch link (ISL) connectivity, which is characteristic of an E_port (Expansion Port).

- * F_port (Fabric port): Connects an N_port (host or storage device) to a switch.
- * N_port (Node port): End device port in FC networks (like HBA in hosts or storage).
- * NL_port (Node Loop port): Used for Arbitrated Loop topologies.
- * E_port: Connects two FC switches together for ISL, which is exactly what's shown in the exhibit.

NEW QUESTION # 54

Question:

A company is looking for a continuous data protection solution that can provide any point-in-time recovery. Which Dell solution is most suitable for this requirement?

- A. Dell SRDF
- B. Dell Cloud Tier
- C. Dell TimeFinder SnapVX
- D. Dell RecoverPoint

Answer: D

Explanation:

Dell RecoverPoint is a continuous data protection (CDP) solution that uses journaling to provide any point-in-time recovery of data. It continuously captures and replicates data changes, storing them in a journal to enable precise recovery to any required point in the past.

- * Dell SRDF (Symmetrix Remote Data Facility): Provides synchronous/asynchronous replication, not CDP.
- * Dell TimeFinder SnapVX: Creates point-in-time snapshots but doesn't offer continuous journaling.
- * Dell Cloud Tier: Used for archiving older data to the cloud.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Replication and CDP.

NEW QUESTION # 55

Question:

A company wants to implement a security strategy that uses firewall, VPN, malware protection, and encryption. Which approach is most suitable for achieving this goal?

- A. Zero trust security
- B. DMZ
- C. Defense-in-depth
- D. Perimeter security

Answer: C

Explanation:

Defense-in-depth is a security strategy that layers multiple security controls throughout the IT environment to protect data and infrastructure.

- * Firewalls (network layer)
- * VPN (secure remote access)
- * Malware protection (endpoint and gateway)
- * Encryption (data in transit and at rest)

This approach reduces reliance on a single security measure and strengthens overall protection.

- * Zero trust: Focuses on continuously validating trust.

* DMZ:Network architecture, not a full security approach.

* Perimeter security:Limited to the outer edge of the network.

Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Security Frameworks and Approaches.

NEW QUESTION # 56

Question:

An IT team needs to connect a compute system to a switch in their SAN. What is the port type?

- A. N_port
- B. E_Port
- C. G_port
- **D. F_port**

Answer: D

Explanation:

An F_port (Fabric port) is used on a Fibre Channel switch to connect N_ports (Node ports) on end devices like servers and storage arrays.

* N_port: On the compute system (HBA).

* F_port: On the switch, accepting N_port connections.

* E_port: For switch-to-switch ISL (Inter-Switch Link) connections.

* G_port: A generic port that can operate as either an F_port or an E_port (not the direct answer in this scenario).

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: FC SAN Ports.

NEW QUESTION # 57

Question:

A company is concerned about the risk of data loss due to accidental deletion and hardware failures. What is the primary reason for implementing a data backup solution?

- A. To reduce the usage of archive storage
- B. To reduce storage costs
- C. To improve application performance
- **D. To maintain business continuity**

Answer: D

Explanation:

The primary purpose of a data backup solution is to maintain business continuity by ensuring data can be restored in case of accidental deletion, hardware failure, or data corruption.

* Not to reduce storage costs: Archiving and tiering handle that.

* Not to improve application performance: Backup processes typically don't enhance live performance.

* Not to reduce archive usage: Backup and archive have different use cases.
