Pass-guaranteed AP-202 Exam Practice Display the High-quality Training Materials - TestPassed

TestPassed also offers a free AP-202 sample questions on all exams. If you are still confused whether to use our AP-202 exam preparation material, then you can check out and download free demo for AP-202 exam products. Once you have gone through our demo products, you can then decide on purchasing the premium AP-202 testing engine and PDF question answers. You can check out the free demo for AP-202 exam products.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q186-Q191):

NEW QUESTION # 186

A developer needs to create an event listener on a parent component programmatically. With the script below, what should replace the text <EVENT LISTENER UNE>?

```

import { LightningElement } from 'lwc';
export default class Parent extends LightningElement {
  constructor() {
    super();
    <EVENT_LISTENER_LINE>
  }
  handleNotification = () => {};
}

```

- A. `this.template.addEventListener(handleNotification);`
- B. `this.template.addEventListener(notification1, this.handleNotification);`
- C. `this.template.addEventListener(this.handleNotification);`
- D. `addEventListener('notificationV, this.handleNotification);`

Answer: B

Explanation:

To create an event listener on a parent component programmatically, the developer should use the following line of code: `this.template.addEventListener('notification', this.handleNotification);` This line of code adds an event listener to the template element of the parent component, which is the root element that contains all the child elements. The event listener listens for an event named 'notification', which is a custom event that can be dispatched by any child component. The event listener invokes a method named `handleNotification`, which is an arrow function defined in the parent component class. The `handleNotification` method receives the event object as a parameter and can perform any logic based on the event data. The other lines of code are either incorrect or incomplete. Salesforce Lightning Web Components Developer Guide: Communicate with Events, Lightning Web Components Developer Guide: Create and Dispatch Events

NEW QUESTION # 187

What are three advantages of using `ccLog` over the Salesforce standard `System.debug` class? (3 answers)

- A. There is no need to manually set a cookie to debug with the Site Guest User.
- B. There is no need to create a User Trace Flag.
- C. There is no need to use string concatenation to easily tag log statements with a subject.
- D. `ccLog` can debug syntax errors found in the JavaScript.
- E. Append `#ccLog=<Logging Token Name>` to the end of the storefront URL in order to get logs in the inspector console.

Answer: A,C,E

Explanation:

Three advantages of using `ccLog` over the Salesforce standard `System.debug` class are:

There is no need to use string concatenation to easily tag log statements with a subject. `ccLog` allows passing a subject parameter to the log method, which will prepend the subject to the log message. For example, `ccLog.log('This is a message', 'Subject')` will log `[Subject] This is a message`.

There is no need to create a User Trace Flag. `ccLog` can be enabled by setting the value of `CO.logToken` to true in `CCAdmin`, which will activate logging for all users who access the storefront.

There is no need to manually set a cookie to debug with the Site Guest User. `ccLog` can be enabled for the Site Guest User by appending `#ccLog=<Logging Token Name>` to the end of the storefront URL in order to get logs in the inspector console. For example, `https://my-storefront.com/#ccLog=debug` will enable logging for the Site Guest User with the debug level. Salesforce B2B Commerce and D2C Commerce Developer Guide, Logging

NEW QUESTION # 188

Northern Tail Outfitters (NTO) is converting an existing aura component into a Lightning Web Component. The aura component has the following source code:

```

<!-- owner.cmp -->
<aura:component>
  <aura:attribute name="firstName" type="String" />
  <c:child firstName="{!v.firstName}" />
</aura:component>

```

What is the equivalent of this code in a Lightning Web Component?

- A.

```

<!-- owner.html -->
<template>
  <c-child first-name={!fName}></child>
</template>

```
- B.

```

<!-- owner.html -->
<template>
  <c-child first-name={@api firstName}></child>
</template>

```
- C.

```

<!-- owner.html -->
<template>
  <c-child first-name={@api (firstName)}></child>
</template>

```
- D.

```

<!-- owner.html -->
<template>
  <c-child first-name={@api firstName}></child>
</template>

```

Answer: B

Explanation:

The equivalent of this code in a Lightning web component is option B. Option B uses the `@api` decorator to expose `firstName` as a public property of the Lightning web component and communicate it with other components or services. The `@api` decorator is a decorator that marks a property or method as public, which means that it can be accessed by other components or services that use or consume this component. The `@api` decorator also makes the property reactive, which means that it can track changes and update the component accordingly. In option B, `firstName` is exposed as a public property using the `@api` decorator and passed to the child element using an attribute. Option A is incorrect because it uses an invalid syntax for exposing `firstName` as a public property. The `@api` decorator should be used before the property declaration, not after it. Option C is incorrect because it uses an invalid syntax for exposing `firstName` as a public property. The `@api` decorator should be used with parentheses, not without them. Option D is incorrect because it uses an invalid syntax for exposing `firstName` as a public property. The `@api` decorator should be used with camel case, not with hyphens. Salesforce Lightning Web Components Developer Guide: Communicate with Properties, Lightning Web Components Developer Guide: Decorators

NEW QUESTION # 189

What is a valid way of referencing the global `cc_api_CartExtension` apex class via subscriber code?

- A. `c__cc_api_CartExtension`
- B. `cloudcraze.cc_api_CartExtension`
- C. `ccrz.cc_api_CartExtension`
- D. `ccrz__cc_api_CartExtension`

Answer: C

Explanation:

A valid way of referencing the global `cc_api_CartExtension` apex class via subscriber code is to use `ccrz.cc_api_CartExtension`. This is the name of the class that is defined in the cloudcraze managed package. The class is global, so it can be accessed by subscriber code. The other options are either invalid or incorrect. Salesforce B2B Commerce and D2C Commerce Developer Guide, API Classes

NEW QUESTION # 190

What are two maintainable ways that Lightning Web Components can be made mobile ready? 33m 215

- A. Create a Lightning app page and add the component to the mobile navigation
- B. Import a third party JavaScript library
- C. Decorate templates with mobile-ready
- D. Install the mobile extensions plug-in for VS Code

Answer: A,C

Explanation:

To make Lightning Web Components mobile-ready, one maintainable approach is to create a Lightning app page and then add the component to the mobile navigation. This ensures that the component is accessible and optimized for mobile users within the Salesforce mobile app. Another approach is to design the component's templates with responsiveness in mind, using CSS and layout techniques that adapt to different screen sizes. Salesforce documentation on mobile-ready development practices provides guidelines on creating responsive designs and optimizing components for mobile use.

NEW QUESTION # 191

.....

each AP-202 practice torrent in our online store before the listing, are subject to stringent quality checks within the company. Just focus on spending the most practice to use our AP-202 test materials. After careful preparation, I believe you will be able to pass the exam. This is a wise choice, after using our AP-202 Exam Question, you will realize your dream of a promotion. Therefore, when you are ready to review the exam, you can fully trust our AP-202 practice torrent, choose our learning materials. If you don't want to miss out on such a good opportunity, buy it quickly!
