Medical Tests Pharmacy Technician Certification Exam Sample Questions (Q162-Q167):

NEW QUESTION # 162

The technician is asked to use Tall Man lettering when making a bin label for a new product because:

- A. it is only used for clinical trial products.
- B. this contributes to patient safety.
- C. all generic drug labels include this labeling.
- D. it is an FDA requirement.

Answer: B

Explanation:

Tall Man lettering is a patient safety strategy endorsed by the FDA and Institute for Safe Medication Practices (ISMP). It involves capitalizing portions of drug names to highlight differences between look-alike, sound-alike (LASA) medications (e.g., hydrOXYzine vs. hydrALAZINE).

As stated in the ISMP Guidelines:

"Tall Man letters are used to help distinguish look-alike drug names and reduce medication errors, particularly during selection from computer screens or bins." It is not mandatory by law, but highly recommended for pharmacies and hospitals to implement.

NEW QUESTION # 163

According to the DEA, how often must a physical inventory of all controlled substances be performed?

- A. Every six months
- B. Every two years
- C. Once a year
- D. Once a month

Answer: B

Explanation:

* DEA requires a full inventory of all controlled substances every 2 years (biennial inventory).

* Schedule II drugs require a separate record from Schedules III-V.

#Reference: DEA Controlled Substance Inventory Regulations (21 CFR 1304.11).

NEW QUESTION # 164

CORRECT TEXT

The abbreviation Rx means

Answer:

Explanation:

Prescription

NEW QUESTION # 165

How many milligrams of atropine sulfate are needed to make 30ml of a 1:200 solution?

- A. 0
- B. 1.5
- C. 1
- D. 1,500

Answer: C

Explanation:

Following formula:

Final volume X % (expressed as a decimal) = amount of active ingredient(g). The final volume is 30ml and 1:200 can be expressed as 1/200 or 0.005g. Multiplying 0.15g x 1000mg/g (changing grams to milligram..) will yield 150mg.

NEW QUESTION # 166

In order to maintain proper storage conditions, which of the following medications must be dispensed in its original container?

- A. Nitroglycerin SL
- B. Allopurinol
- C. Metoprolol XL
- D. Methotrexate

Answer: A

Explanation:

Nitroglycerin sublingual tablets are light- and moisture-sensitive, requiring storage in tight, light-resistant containers. Removing them from their original glass container can compromise potency. Therefore, they must always be dispensed in the original container provided by the manufacturer.

According to USP Packaging and Storage Requirements and Mosby's Pharmacy Technician:

"Nitroglycerin SL tablets lose potency quickly when exposed to air or light. Do not repackage; dispense only in manufacturer-supplied container." Other options do not require original container for stability:

- * Methotrexate - may be repackaged
- * Metoprolol XL - stable in unit-dose or amber vials
- * Allopurinol - routine packaging allowed
