PMI CPMAI_v7 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Machine Learning: This section is aimed at the DataAI Lead and addresses practical machine learning applications. It begins with classification, clustering, and reinforcement algorithms, including ensemble methods and evaluation against business needs. Afterwards, it examines neural network architecture design and deep learning implementation across multiple problem types. Generative AI and LLMs follow, covering use-case suitability, limitations, operation explanations, prompt engineering, fine-tuning, and integrating these technologies into augmented intelligence solutions.
Topic 2	<ul style="list-style-type: none">Data for AI: This domain targets the DataAI Lead and explores the central role of data in AI deployments, including Big Data concepts and unstructured data utility. It defines data governance strategies such as steering, stewardship, lifecycle mapping, lineage tracking, and master data practices.
Topic 3	<ul style="list-style-type: none">Domain VI Trustworthy AI: This section is designed for the Project Manager and focuses on ethical, responsible, and transparent AI development. It covers building trustworthy systems, dispelling misconceptions, evaluating real-world ethical concerns, defining responsible frameworks, and implementing mitigation tactics for unintended harms. It addresses data privacy, GDPR compliance, protection of PII, anonymization techniques, security against adversarial threats, and monitoring.

The Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI_v7) practice questions give you a feeling of a real exam which boost confidence. Practice under real Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI_v7) exam situations is an excellent way to learn more about the complexity of the Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI_v7) exam dumps. You can learn from your Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI_v7) practice test mistakes and overcome them before the actual Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI_v7) exam. The software keeps track of the previous Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI_v7) practice exam attempts and shows the changes of each attempt.

PMI Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

You're creating an AI-enabled chatbot that is going to access user data. What areas related to data governance do you need to make sure you're addressing? (Select all that apply.)

- A. Security Risks
- B. Data Quality Issues
- C. Privacy Risks
- D. Data Sharing challenges
- E. Business Risks
- F. Data Quantity Issues
- G. Change Management Issues

Answer: A,B,C,D

Explanation:

Domain IV: Data for AI - Task 2: Implementing Data Governance and Management mandates establishing data stewardship, management plans, lineage, and master-data practices. Core governance concerns include how data is shared (A), ensuring user privacy (B), guarding against breaches (E), and maintaining high data quality (F). Quantity or change-management issues are operational rather than governance controls.

NEW QUESTION # 34

You're looking to take an image and have a Generative AI solution generate additional content beyond the bounds of the current image size. What Generative AI approach can you use?

- A. Use of Generative Outpainting
- B. Use of inpainting to replace image components
- C. Use of super-resolution to enhance the existing image
- D. Prompt engineering for new image generation

Answer: A

Explanation:

Generative AI encompasses techniques that create new data based on learned patterns. Outpainting is the specific generative approach for extending an image's content beyond its original borders. It leverages the same learned representations as inpainting or super-resolution but focuses on generating entirely new regions around an existing image.

NEW QUESTION # 35

Your team is working on an AI system to provide a more personalized experience for customers on your website. What should the team do in regard to determining the pattern of AI with regards to the ROI of the project?

- A. First identify the objective you're trying to solve or the ROI you desire and then use that to figure out the correct pattern
- B. First talk to senior managers who set the ROI of the project
- C. First determine the pattern of AI you want to use and then work with stakeholders to come up with ROI
- D. First identify the AI pattern you want to use and then figure out the ROI

Answer: A

Explanation:

In CPMAI's Executing the Business Understanding Phase, teams first "formulate AI-specific business questions" and "estimate time-to-ROI for various AI project types" before matching business needs to cognitive patterns. This ensures ROI-driven objectives guide the selection of one or more of the Seven Patterns of AI, rather than the reverse.

NEW QUESTION # 36

Your team has been asked to summarize and highlight patterns in historical purchasing data, identifying prior performance metrics and patterns. What type of analytics is most appropriate to apply for this need?

- A. Predictive Analytics
- B. Projective Analytics
- C. Descriptive Analytics
- D. Diagnostic Analytics

Answer: C

Explanation:

Descriptive analytics focuses on summarizing and reporting on past data-exactly what's needed to highlight historical purchasing patterns and performance metrics. The CPMAI Glossary defines analytics as "the use of statistical and computational methods to extract meaningful insights from data (related: predictive, descriptive, ...)" where descriptive analytics provides the retrospective view.

NEW QUESTION # 37

The growth of Big Data has led to a desire to be able to do more to process and extract more value from Big Data. Simply storing data and providing analytics is no longer enough anymore to remain competitive.

To keep your organization competitive, you need to:

- A. Make sure senior management has deep understanding of big data and how best to extract value from big data to unleash it for competitive advantage.
- B. Make sure the technical team has deep understanding of big data and how best to extract value from big data to unleash it for competitive advantage.
- C. Make sure all senior leadership is data literate, understands the V's of big data, data's connections to your specific team, and how to extract value from big data to unleash it for competitive advantage.
- D. Make sure everyone on the team has an understanding of data, its connections to the organization, and how to extract value from big data to unleash it for competitive advantage.

Answer: C

Explanation:

CPMAI's Domain IV: Data for AI - Task 1: Managing Data Fundamentals and Big Data Concepts emphasizes that leaders-not just technical practitioners-must grasp the core characteristics of Big Data (the V's: volume, velocity, variety, veracity) and its strategic role in delivering business advantage. Ensuring senior leadership is data literate and understands how to leverage Big Data concepts across teams is critical for sustaining a competitive edge; merely upskilling the technical team or distributing data literacy unevenly will leave strategic gaps.
