ACD201 Practice Test Pdf - Valid ACD201 Test Practice

Purchasing our ACD201 training test is not complicated, there are mainly four steps: first, you can choose corresponding version according to the needs you like. Next, you need to fill in the correct email address. And if the user changes the email during the subsequent release, you need to update the email. Then, the user needs to enter the payment page of the ACD201 Learning Materials to buy it. Finally, within ten minutes of payment, the system automatically sends the ACD201 study materials to the user's email address. And then you can quickly study and pass the ACD201 exam

Appian Senior Developer Sample Questions (Q33-Q38):

NEW QUESTION # 33

Users are experiencing slow load times when retrieving customer records with many transactions.

After using performance monitoring tools, you discover that the following interface definition is responsible for the majority of page load time:

Additionally, both queries (rule!APP_GetTransactionsWithFilters and rule!

APP_GetTransactionTypeWithFilters) take approximately 25 milliseconds each to execute when you test them using the expression editor.

Which action would result in the greatest reduction in the load time for this interface component?

- A. Use a synced record for Transactions to improve the query response time for the query performed on line 6.
- B. Avoid fetching the total count when getting transactions.
- C. **Prefetch transaction types and use the displayvalue() function to display the Transaction Type for each transaction.**

Answer: C

Explanation:

Prefetching all transaction types once (instead of running a separate query for each row in the grid) and then using the displayvalue() function to display the corresponding transaction type name for each transaction will significantly reduce the number of queries executed. This eliminates the N+1 query problem and will greatly improve the interface load time.

NEW QUESTION # 34

You need to select a plug-in to meet a specific requirement and several plug-ins can do the job.

What are three key factors to consider? (Choose three.)

- A. **What are the compatible Appian versions?**
- B. **Is the plug-in approved for use in the Cloud?**
- C. Is the plug-in open source or proprietary?
- D. **What are the limitations of the plug-in?**
- E. What is the size of the plug-in?
- F. Who is the creator of the plug-in?

Answer: A,B,D

Explanation:

Limitations of the plug-in help you understand constraints or potential issues that could impact your implementation.

Compatible Appian versions ensure the plug-in will work correctly in your current and future environments.

Cloud approval status is essential for Appian Cloud environments, as only approved plug-ins are permitted for deployment.

NEW QUESTION # 35

You're in the process of deploying a package to the client's TEST environment at the end of a sprint. This package is only relating to changes to a single application.

Which two statements best describes the practices you should follow for automated testing for expression rules either before or after deploying the package? (Choose two.)

- A. After deploying the package, you should perform regression testing by running the Start Rule Tests (All) smart service to automatically run the test cases. This indicates whether there are any impacts caused by the changes across multiple applications.
- B. After deploying the package, you should perform regression testing by running the Start Rule Tests (Applications) smart service to automatically run the test cases. This indicates whether there are any impacts caused by changes to the application.
- C. During Compare and Deploy, the Inspect Deployment tab automatically runs the test cases in each of the expression rules. Review these findings, and either adjust the expression rule or delete outdated test cases.
- D. Before using Compare and Deploy, individually evaluate the test cases in the expression rules you intend to deploy. For any failed test case, adjust the expression rule so that it passes.

Answer: B,D

Explanation:

Individually evaluating and fixing expression rule test cases before deployment ensures the new package does not introduce errors.

Running regression tests after deployment using the Start Rule Tests (Applications) smart service validates that the deployed changes did not negatively impact the application.

NEW QUESTION # 36

Which two options are correct regarding record relationships when using synced records in your application? (Choose two.)

- A. Up to 20 relationships can be added on a record type with data sync enabled.
- B. Record type relationships enforce referential integrity.
- C. Relationships can be established between any record types that have sync enabled, regardless of the source.
- D. Many-to-one relationships can be established using record relationships.

Answer: A,D

Explanation:

Many-to-one relationships can be established between record types using record relationships.

Up to 20 relationships can be added to a record type with data sync enabled, according to Appian platform limits.

NEW QUESTION # 37

You need to configure Appian user authentication against an external directory server. The requirement is to use the same corporate logon information without single sign-on (SSO).

Which authentication type should you use?

- A. LDAP authentication
- B. OpenID Connect authentication
- C. PIIE user authentication

Answer: A

Explanation:

LDAP authentication allows users to log in with their corporate credentials by authenticating against an external directory server,

without requiring single sign-on (SSO).

NEW QUESTION # 38

Has similar features to the desktop-based exam simulator Contains actual Appian ACD201 practice test that will help you grasp every topic Compatible with every operating system Does not require any special plugins to operate. Creates a ACD201 Exam atmosphere making candidates more confident. Keeps track of your progress with self-analysis and Points out mistakes at the end of every attempt.
