

1z0-1093-25 Bestehen Sie Oracle Cloud Database Services 2025 Professional! - mit höhere Effizienz und weniger Mühen

P.S. Kostenlose und neue 1z0-1093-25 Prüfungsfragen sind auf Google Drive freigegeben von ZertFragen verfügbar:
<https://drive.google.com/open?id=16Lkootg3TbAgb64IM4Rcx0njuFkyfy8y>

Zurzeit ist Oracle 1z0-1093-25 Zertifizierungsprüfung eine sehr populäre Prüfung. Wollen die 1z0-1093-25 Zertifizierungsprüfung ablegen? Tatsächlich ist diese Prüfung sehr schwierig. Aber es bedeutet nicht, dass Sie diese Prüfung mit guter Note bestehen können. Wollen Sie die Methode, die 1z0-1093-25 Prüfung sehr leicht zu bestehen, kennenzulernen? Das ist Oracle 1z0-1093-25 dumps von ZertFragen.

ZertFragen ist eine erstklassige Website für die Oracle 1z0-1093-25 Zertifizierungsprüfung. Im ZertFragen können Sie Tipps und Prüfungsmaterialien finden. Sie können auch die Examensfragen und antworten teilweise als Probe kostenlos herunterladen. ZertFragen kann Ihnen umsonst die Updaets der Prüfungsmaterialien für die Oracle 1z0-1093-25 Prüfung bieten. Alle unseren Zertifizierungsprüfungen enthalten Antworten. Unser Eliteteam von IT-Fachleuten wird die neuesten und richtigen Examensübungen nach ihren fachlichen Erfahrungen bearbeiten, um Ihnen bei der Prüfung zu helfen. Alles in allem, wir werden Ihnen alle einschlägigen Materialien in Bezug auf die Oracle 1z0-1093-25 Zertifizierungsprüfung bieten.

Oracle Cloud Database Services 2025 Professional cexamkiller Praxis Dumps & 1z0-1093-25 Test Training Überprüfungen

Die Oracle 1z0-1093-25 Zertifizierungsprüfung wird jetzt immer populärer. Es gibt viele verschiedene IT-Zertifizierungsprüfungen. Welche Prüfung haben Sie abgelegt? Lassen Wir hier Oracle 1z0-1093-25 Zertifizierungsprüfung als Beispiel erklären. Wenn Sie an der 1z0-1093-25 Prüfung teilnehmen, Oracle 1z0-1093-25 Dumps von ZertFragen Ihnen helfen, sehr leicht die Prüfung zu bestehen.

Oracle 1z0-1093-25 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.
Thema 2	• Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.
Thema 3	• MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.
Thema 4	• Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.
Thema 5	• Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.

Oracle Cloud Database Services 2025 Professional 1z0-1093-25 Prüfungsfragen mit Lösungen (Q89-Q94):

89. Frage

Which is NOT a typical function provided by a NoSQL Database Cloud Service SDK related to data operations?

- A. Automatically optimizing query execution plans for best performance.
- B. Handling pagination of query results.
- C. Serializing and deserializing data between application objects and database records.
- D. Constructing requests to insert, update, or delete data records.

Antwort: A

Begründung:

A: Automatically optimizing query execution plans for best performance.

Query Optimization:

* Query optimization is handled by the database engine itself, not the SDK.

* SDKs are primarily focused on providing an interface for data operations, not on internal query optimization.

Why the other options are typical SDK functions:

* B. Constructing requests: SDKs facilitate building and sending data manipulation requests.

* C. Serializing data: Converting data between application objects and database formats is a core SDK function.

* D. Handling pagination: SDKs often include utilities to manage large result sets.

90. Frage

You are managing an Exadata Database Service (ExaDB) and need to perform a full backup of the database to Oracle Cloud Infrastructure Object Storage using the `bkup_api` utility. The backup must include all datafiles and control files. Which `bkup_api` command will achieve this?

- A. `bkup_api bkup_start --full --dbname=dbname`
- B. `bkup_api bkup_start --datafiles --controlfile --dbname=dbname`
- C. `bkup_api bkup_start --all --dbname=dbname`
- D. `bkup_api bkup_start --dbname=dbname`

Antwort: A

Begründung:

Full Backup with `bkup_api`:

The `--full` flag in the `bkup_api` command ensures that the backup includes all datafiles and control files. This command is essential for creating a complete, consistent backup suitable for recovery purposes.

* The backup is stored in OCI Object Storage, leveraging cloud scalability and redundancy.

* The `--dbname` parameter specifies which database to back up.

Why the other options are incorrect:

* A: This command may initiate a default backup, not a full one.

* B: Specifying files individually is less efficient than using `--full`.

* D: The `--all` option does not necessarily imply a full backup.

91. Frage

Within the context of Oracle Cloud Infrastructure (OCI) Base Database Service (BaseDB) virtual machine (VM) provisioning, which action is typically the RESPONSIBILITY of the customer?

- A. Managing the Oracle Grid Infrastructure software stack.
- B. Maintaining the OCI hypervisor software.
- C. Automatically applying critical security patches to the operating system.
- D. Ensuring the underlying hardware infrastructure remains fault-tolerant.

Antwort: A

Begründung:

B: Managing the Oracle Grid Infrastructure software stack:

* Customers are responsible for the installation, configuration, and maintenance of the Oracle Grid Infrastructure when using BaseDB VMs.

* This includes managing Oracle Clusterware and Automatic Storage Management (ASM) if applicable.

* Ensuring the Grid Infrastructure's availability and performance is part of customer-managed tasks.

Why the other options are incorrect:

* A. Hardware fault tolerance: Managed by Oracle Cloud Infrastructure.

* C. Hypervisor maintenance: Handled by Oracle as part of the OCI infrastructure.

* D. Security patching: While OCI provides tools, the responsibility for OS patching lies with the customer.

92. Frage

Which two actions can be performed using the Automatic Database Diagnostic Monitor (ADDM) within Database Management to diagnose cloud database performance?

- A. Automatically apply all ADDM recommendations to the database.
- B. Generate recommendations for SQL plan baselines.
- C. Automatically create indexes to improve query performance.
- D. Identify root causes of performance bottlenecks, such as excessive I/O or CPU contention.

Antwort: B,D

Begründung:

A: Generate recommendations for SQL plan baselines:

* ADDM analyzes historical data and SQL execution plans, suggesting baseline adjustments to optimize performance.

* Recommendations may include using an existing baseline or creating a new one.

C: Identify performance bottlenecks:

- * ADDM pinpoints issues related to:
- * I/O contention
- * CPU utilization
- * Memory bottlenecks
- * Locking issues
- * Helps DBAs understand which database components are causing slowdowns.

Why the other options are incorrect:

- * B. Automatically applying recommendations: ADDM only suggests actions; DBAs must manually review and implement them.
- * D. Creating indexes: ADDM does not create indexes automatically; it may suggest them, but implementation requires DBA action.

93. Frage

Oracle NoSQL Database Cloud Service utilizes a key-value data model. Which of the following statements accurately describes the fundamental structure of data within this model?

- A. Data is structured in a graph format, representing entities as nodes and relationships as edges.
- B. Data is organized into tables with predefined schemas, similar to relational databases.
- **C. Each data item is uniquely identified by a key, and the associated value can be any data type or structure.**
- D. Relationships between data items are explicitly defined through foreign keys and joins.
- E. Data is stored as JSON documents with flexible structures, allowing for nested elements.

Antwort: C

Begründung:

C: Each data item is uniquely identified by a key, and the associated value can be any data type or structure.

Key-Value Data Model:

- * The key-value model is fundamentally based on a simple association between a unique key and its corresponding value.
- * The value can be a simple data type (string, number) or a complex structure (like JSON).
- * Oracle NoSQL Database Cloud Service uses this model to ensure efficient, scalable data access.

Why the other options are incorrect:

- * A. Organized into tables with schemas: This represents a relational database model.
- * B. Stored as JSON documents: Although NoSQL can store JSON, the fundamental model is still key-value.
- * D. Relationships defined through foreign keys and joins: This is typical of relational databases.
- * E. Graph format with nodes and edges: Represents a graph database model, not key-value.

94. Frage

.....

Viele Menschen haben Sorgen darum, dass sie in der Prüfung durchfallen, auch wenn sie sich schon lange auf Oracle 1z0-1093-25 Prüfung vorbereitet, nur weil sie nicht an der Prüfungsatmosphäre gewöhnt sind. Deshalb bieten wir Ihnen die Möglichkeit, vor der Prüfung die realistische Prüfungsatmosphäre zu erfahren. Oracle 1z0-1093-25 Simulierte-Software enthält zahlreiche Prüfungsaufgaben mit ausführliche Erklärungen der Antworten von den Experten. Damit können Sie Ihre Fähigkeit verbessern und ausreichende Vorbereitung der Oracle 1z0-1093-25 Prüfung haben.
