High Hit Rate ITIL-4-Practitioner-Deployment-Management Valid Real Test Provide Prefect Assistance in ITIL-4-Practitioner-Deployment-Management Preparation

Our ITIL-4-Practitioner-Deployment-Management training quiz is the top selling products in the market. You will save a lot of preparation troubles if you purchase our ITIL-4-Practitioner-Deployment-Management study materials. Our ITIL-4-Practitioner-Deployment-Management exam braindumps are highly similar to the real test. Almost all questions of the real exam will be predicated accurately in our ITIL-4-Practitioner-Deployment-Management Practice Questions, which can add you passing rate of the exam. And you will find that our prices for the exam products are quite favorable.

The ITIL 4 Practitioner: Deployment Management (ITIL-4-Practitioner-Deployment-Management) web-based practice questions carry the above-mentioned notable features of the desktop-based software. This version of Pass4SureQuiz's ITIL 4 Practitioner: Deployment Management (ITIL-4-Practitioner-Deployment-Management) practice questions works on Mac, Linux, Android, iOS, and Windows. Our customer does not need troubling plugins or software installations to attempt the web-based Peoplecert in ITIL-4-Practitioner-Deployment-Management Practice Questions. Another benefit is that our Peoplecert ITIL-4-Practitioner-Deployment-Management online mock test can be taken via all browsers, including Chrome, MS Edge, Internet Explorer, Safari, Opera, and Firefox.

Pass Peoplecert ITIL-4-Practitioner-Deployment-Management Exam Easily With Questions And Answers

All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the ITIL 4 Practitioner: Deployment Management exam, our experts keep their eyes focusing on it. Expert team not only provides the high quality for the ITIL-4-Practitioner-Deployment-Management Quiz guide consulting, also help users

solve problems at the same time, leak fill a vacancy, and finally to deepen the user's impression, to solve the problem of ITIL 4 Practitioner: Deployment Management test material and no longer make the same mistake.

Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions (Q14-Q19):

NEW QUESTION # 14
[Understand the Key Concepts of Deployment Management]
Which of the following BEST describes the scope of deployment management practice?

- A. The practice includes deploying network hubs to and removing applications from staging environments
- B. The practice includes removing configuration documentation but not physical servers from the live environment
- C. The practice includes updating service documentation and transferring it to the live environment
- D. The practice includes deploying network hubs but not additional software licenses to the live environment

Answer: A

Explanation:
ITIL 4's deployment management practice encompasses moving hardware, software, and associated components into or out of environments (e.g., staging, testing, or production) to support service delivery. Option A, which includes deploying network hubs (hardware) and removing applications from staging environments (software), accurately reflects this broad scope across the service lifecycle.
Option A (The practice includes deploying network hubs to and removing applications from staging environments): Correct, as it covers both hardware and software movements across environments, aligning with ITIL 4's definition of deployment management.
Option B (The practice includes updating service documentation and transferring it to the live environment): Incorrect, as updating and transferring documentation is part of knowledge management, not deployment management.
Option C (The practice includes removing configuration documentation but not physical servers from the live environment): Incorrect, as deployment management includes moving physical servers, and configuration documentation is managed elsewhere.
Option D (The practice includes deploying network hubs but not additional software licenses to the live environment): Incorrect, as software licenses may be part of deployment if required, and the option arbitrarily limits the scope.

NEW QUESTION # 15
[Measure and Improve Deployment Management]
An organization has an objective to create and use deployment approaches that would fit the needs of the organization and the context. How should the organization assess if this objective is achieved?

- A. By analyzing the adherence to deployment schedules
- B. By looking at the deployment backlog throughput
- C. By asking stakeholders about their satisfaction with deployment lead times
- D. By measuring percentage of deployments which did not follow the agreed policies and models

Answer: C

Explanation:
ITIL 4 emphasizes stakeholder satisfaction as a key indicator of whether a practice meets organizational needs and context, as it reflects the value delivered to users and the business. Option B, asking stakeholders about their satisfaction with deployment lead times, directly assesses whether deployment approaches are effective and aligned with expectations, making it the best method to evaluate the objective.
Option A (By looking at the deployment backlog throughput): Incorrect, as throughput measures efficiency but does not directly indicate whether the deployment approach fits the organization's needs or context.
Option B (By asking stakeholders about their satisfaction with deployment lead times): Correct, as stakeholder feedback on lead times reflects whether deployments are timely and valuable, aligning with ITIL 4's focus on value co-creation.
Option C (By measuring the percentage of deployments which did not follow the agreed policies and models): Incorrect, as non-compliance indicates process issues but does not directly assess fit with organizational needs or stakeholder satisfaction.
Option D (By analyzing the adherence to deployment schedules): Incorrect, as schedule adherence measures operational performance, not whether the approach meets broader contextual needs.

NEW QUESTION # 16

[Engage with Stakeholders and Suppliers]
How will suppliers support the development of an organization's deployment management practice?

- A. Advise on the selection of tools that can be used across the organization's value streams
- B. Define the practice success factors for deployment management
- C. Create deployment models based on those of other organizations
- D. Develop value streams for the organization utilizing deployment management where appropriate

Answer: A

Explanation:
Suppliers play a key role in supporting deployment management by providing expertise, tools, and services that align with organizational needs. Option A is correct, as suppliers often advise on selecting tools that integrate with the organization's value streams, ensuring consistency and scalability in deployment practices.
Option A (Advise on the selection of tools that can be used across the organization's value streams): Correct, as suppliers have industry knowledge and can recommend tools (e.g., CI/CD platforms) that enhance deployment efficiency across multiple value streams, aligning with ITIL 4's focus on value-driven tool selection.
Option B (Define the practice success factors for deployment management): Incorrect, as defining success factors is an internal responsibility of the organization, based on its goals and context, not a supplier's role.
Option C (Create deployment models based on those of other organizations): Incorrect, as deployment models should be tailored to the organization's unique needs, not copied from others, per ITIL 4's context-specific approach.
Option D (Develop value streams for the organization utilizing deployment management where appropriate): Incorrect, as developing value streams is an internal strategic activity, while suppliers typically provide support through tools or expertise, not by designing value streams.

NEW QUESTION # 17
[Integrate Deployment Management with Other Practices]
An organization's end users have complained that major software updates happen during work hours, with insufficient notice, and sometimes disrupt users' work for an unacceptably long time. The deployment manager already has close alignment with the release manager and release processes, and has implemented CI/CD. What is the BEST action for the organization to take to ensure new software features are relevant to the end-users?

- A. Embed validation and testing within the deployment models
- B. Integrate deployment management and configuration management activities to improve version control
- C. Align with the change enablement manager to improve the change planning procedures
- D. Use infrastructure as code to support the software deployment

Answer: C

Explanation:
The issue involves poor timing, lack of notice, and disruptions from deployments, which points to deficiencies in change planning and communication. ITIL 4 emphasizes aligning deployment with change enablement to ensure changes are scheduled and communicated effectively, addressing user concerns. Option C, aligning with the change enablement manager to improve change planning procedures, directly tackles these issues by ensuring deployments are timed appropriately, users are informed, and disruptions are minimized, while also ensuring feature relevance through better planning.
Option A (Use infrastructure as code to support the software deployment): Incorrect, as IaC improves environment consistency but does not address scheduling, notice, or user relevance issues.
Option B (Embed validation and testing within the deployment models): Incorrect, as while testing improves quality, it does not resolve timing or communication problems affecting users.
Option C (Align with the change enablement manager to improve the change planning procedures): Correct, as change enablement ensures deployments are planned with user needs in mind, including timing, communication, and relevance of features.
Option D (Integrate deployment management and configuration management activities to improve version control): Incorrect, as version control enhances deployment accuracy but does not address user complaints about timing or disruption.

NEW QUESTION # 18
[Measure and Improve Deployment Management]
An IT service manager is analyzing a value stream that is used to deploy new and changed services. The manager has interviewed many staff and has identified all the workflow steps. The manager is now evaluating the workflow steps so that they can plan improvements. Which activity should the manager carry out as part of this evaluation?

- A. Identify wasteful steps that could be eliminated
- B. Define an ideal series of workflow steps for the future
- C. Collect data about what happens in each workflow step
- D. Establish what value is created in each workflow step

Answer: D

Explanation:
ITIL 4's value stream analysis focuses on understanding the contribution of each step to overall value delivery to identify improvement opportunities. When evaluating workflow steps, the manager should establish what value is created in each step (Option D), as this provides the foundation for assessing whether steps are necessary, effective, or aligned with organizational goals.
Option A (Collect data about what happens in each workflow step): Incorrect, as data collection is part of identifying steps (already done, per the question), not evaluating their value.
Option B (Identify wasteful steps that could be eliminated): Incorrect, as identifying waste is a subsequent action that depends on first understanding the value of each step.
Option C (Define an ideal series of workflow steps for the future): Incorrect, as defining future steps is part of planning improvements, not evaluating current steps.
Option D (Establish what value is created in each workflow step): Correct, as evaluating value per step is critical to understanding the stream's effectiveness and prioritizing improvements, per ITIL 4.

NEW QUESTION # 19
......

The interface is made simple and convenient for the users. In the web-based practice exam, you will be given conceptual questions of the actual Peoplecert ITIL-4-Practitioner-Deployment-Management exam and gives you the results so that you can improve it at the end of every attempt. This sort of self-evaluation will help you know your exact weak points and you will improve a lot before the actual ITIL-4-Practitioner-Deployment-Management Exam. It is compatible with every browser. All operating systems also support the web-based practice exam.

Valid Exam ITIL-4-Practitioner-Deployment-Management Registration: https://www.pass4surequiz.com/ITIL-4-Practitioner-Deployment-Management-exam-quiz.html

Peoplecert ITIL-4-Practitioner-Deployment-Management Valid Real Test Maybe you always thought study was too boring for you, For candidates who are searching for ITIL-4-Practitioner-Deployment-Management training materials for the exam, the quality of the ITIL-4-Practitioner-Deployment-Management exam dumps must be your first concern, Peoplecert ITIL-4-Practitioner-Deployment-Management Valid Real Test Our Exam questions have been prepared by subject matter experts, after an in-depth analysis of Vendor recommended Syllabus, Due to our actual ITIL-4-Practitioner-Deployment-Management exam dumps, our valued customers always pass their Peoplecert ITIL-4-Practitioner-Deployment-Management exam on the very first try hence, saving their precious time and money too.

Designing software is hard, Modifying Existing ITIL-4-Practitioner-Deployment-Management Schema Elements, Maybe you always thought study was too boring for you, For candidates who are searching for ITIL-4-Practitioner-Deployment-Management Training Materials for the exam, the quality of the ITIL-4-Practitioner-Deployment-Management exam dumps must be your first concern.

Get Peoplecert ITIL-4-Practitioner-Deployment-Management Practice Test To Gain Brilliant Result [2026]

Our Exam questions have been prepared by subject matter ITIL-4-Practitioner-Deployment-Management Exam Price experts, after an in-depth analysis of Vendor recommended Syllabus, Due to our actual ITIL-4-Practitioner-Deployment-Management exam dumps, our valued customers always pass their Peoplecert ITIL-4-Practitioner-Deployment-Management exam on the very first try hence, saving their precious time and money too.

In order to help most candidates who want to pass ITIL-4-Practitioner-Deployment-Management exam, so we compiled such a study materials to make exam simply.
