Are you planning to attempt the AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Associate) exam of the AWS-Solutions-Associate certification? The first hurdle you face while preparing for the AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Associate) exam is not finding the trusted brand of accurate and updated AWS-Solutions-Associate exam questions. If you don't want to face this issue then you are at the trusted Exam4PDF is offering actual and latest AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Associate) Exam Questions that ensure your success in the AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Associate) certification exam on your maiden attempt.

To prepare for the AWS-Solutions-Architect-Associate exam, candidates can take advantage of AWS training and certification resources. AWS offers a variety of training courses, including classroom-based training, online courses, and self-paced learning resources. Candidates can also take practice exams and review sample questions to help prepare for the exam.

AWS-Solutions-Associate Pass4sure Study Materials & AWS-Solutions-Associate New Braindumps Files

Team of Exam4PDF is dedicated to giving Amazon AWS-Solutions-Associate exam takers the updated AWS-Solutions-Associate practice exam material to enable them to clear the exam in one go. Our customers may be sure they are getting the Amazon AWS-Solutions-Associate Real Exam Questions PDF from Exam4PDF for speedy preparation. You can also carry the AWS-Solutions-Associate PDF exam questions in hard copy as they are printable as well.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q391-Q396):

NEW QUESTION # 391

A solutions architect plans to convert a company's monolithic web application into a multi-tier application. The company wants to avoid managing its own infrastructure. The minimum requirements for the web application are high availability, scalability, and regional low latency during peak hours. The solution should also store and retrieve data with millisecond latency using the application's API.

Which solution meets these requirements?

- A. Use AWS Fargate to host the web application with backend Amazon RDS Multi-AZ DB instances.
- B. Use an Amazon CloudFront distribution that points to an Elastic Load Balancer with an Amazon EC2 Auto Scaling group, along with Amazon RDS Multi-AZ DB instances.
- C. Use an Amazon Route 53 routing policy with geolocation that points to an Amazon S3 bucket with static website hosting and Amazon DynamoDB as the data store.

- D. Use Amazon API Gateway with an edge-optimized API endpoint, AWS Lambda for compute, and Amazon DynamoDB as the data store.

Answer: A

NEW QUESTION # 392

A company plans to use AWS for all new batch processing workloads. The company's developers use Docker containers for the new batch processing. The system design must accommodate critical and non-critical batch processing workloads 24/7. How should a Solutions Architect design this architecture in a cost-efficient manner?

- A. Host a container management service on Spot Instances. Use Reserved Instances to run Docker containers.
- B. Purchase Reserved Instances to run all containers. Use Auto Scaling groups to schedule jobs.
- C. Use Amazon ECS orchestration and Auto Scaling groups: one with Reserve Instances, one with Spot Instances.
- D. Use Amazon ECS to manage container orchestration. Purchase Reserved Instances to run all batch workloads at the same time.

Answer: C

NEW QUESTION # 393

Please select the Amazon EC2 resource which cannot be tagged.

- A. images (AMIs, kernels, RAM disks)
- B. Amazon EBS volumes
- C. Elastic IP addresses
- D. VPCs

Answer: C

NEW QUESTION # 394

A company hosts its product information webpages on AWS. The existing solution uses multiple Amazon C2 instances behind an Application Load Balancer in an Auto Scaling group. The website also uses a custom DNS name and communicates with HTTPS only using a dedicated SSL certificate. The company is planning a new product launch and wants to be sure that users from around the world have the best possible experience on the new website.

What should a solutions architect do to meet these requirements?

- A. Redesign the application to use Amazon CloudFront.
- B. Redesign the application to use Amazon S3 static website hosting.
- C. Redesign the application to use a Network Load Balancer.
- D. Redesign the application to use AWS Elastic Beanstalk.

Answer: A

Explanation:

What Is Amazon CloudFront?

Amazon CloudFront is a web service that speeds up distribution of your static and dynamic web content, such as .html, .css, .js, and image files, to your users. CloudFront delivers your content through a worldwide network of data centers called edge locations.

When a user requests content that you're serving with CloudFront, the user is routed to the edge location that provides the lowest latency (time delay), so that content is delivered with the best possible performance.

If the content is already in the edge location with the lowest latency, CloudFront delivers it immediately.

If the content is not in that edge location, CloudFront retrieves it from an origin that you've defined - such as an Amazon S3 bucket, a MediaPackage channel, or an HTTP server (for example, a web server) that you have identified as the source for the definitive version of your content.

As an example, suppose that you're serving an image from a traditional web server, not from CloudFront. For example, you might serve an image, sunsetphoto.png, using the URL <http://example.com/sunsetphoto.png>.

Your users can easily navigate to this URL and see the image. But they probably don't know that their request was routed from one network to another - through the complex collection of interconnected networks that comprise the internet - until the image was found.

CloudFront speeds up the distribution of your content by routing each user request through the AWS backbone network to the edge location that can best serve your content. Typically, this is a CloudFront edge server that provides the fastest delivery to the viewer. Using the AWS network dramatically reduces the number of networks that your users' requests must pass through, which improves performance. Users get lower latency - the time it takes to load the first byte of the file - and higher data transfer rates. You also get increased reliability and availability because copies of your files (also known as objects) are now held (or cached) in multiple edge locations around the world.

NEW QUESTION # 395

A company captures ordered clickstream data from multiple websites and uses batch processing to analyze the data. The company receives 100 million event records, all approximately 1 KB in size, each day. The company loads the data into Amazon Redshift each night, and business analysts consume the data.

The company wants to move toward near-real-time data processing for timely insights. The solution should process the streaming data while requiring the least possible operational overhead.

Which combination of AWS services will meet these requirements MOST cost-effectively? (Select TWO.)

- A. Amazon Kinesis Data Firehose
- B. Amazon Simple Queue Service (Amazon SQS)
- C. Amazon EC2
- D. Amazon Kinesis Data Analytics
- E. AWS Batch

Answer: A,D

Explanation:

Explanation

https://d1.awsstatic.com/Products/product-name/diagrams/product-page-diagram_Amazon-Kinesis_Evolve-from
"Kinesis Data Firehose is the easiest way to load streaming data into data stores and analytics tools. It captures, transforms, and loads streaming data and you can deliver the data to "destinations" including Amazon S3 buckets for later analysis." "Amazon Kinesis Data Analytics is the easiest way to process and analyze real-time, streaming data. Kinesis Data Analytics can use standard SQL queries to process Kinesis data streams and can ingest data from Kinesis Streams and Kinesis Firehose."

NEW QUESTION # 396

.....

As long as you have a will, you still have the chance to change. Once you are determined to learn our AWS-Solutions-Associate study materials, you will become positive and take your life seriously. Through the preparation of the AWS-Solutions-Associate exam, you will study much practical knowledge. Of course, passing the exam and get the AWS-Solutions-Associate certificate is just a piece of cake. With the high pass rate of our AWS-Solutions-Associate practice braindumps as 98% to 100%, i can say that your success is guaranteed.
