

# CKAD Real Dumps Free | CKAD Valid Test Questions

BTW, DOWNLOAD part of BraindumpStudy CKAD dumps from Cloud Storage: [https://drive.google.com/open?id=1K7GpIKoQnxQRSOUg\\_C2uBfYBWqCq7rg9](https://drive.google.com/open?id=1K7GpIKoQnxQRSOUg_C2uBfYBWqCq7rg9)

Will you feel nervous for your exam? If you do, you can choose us, and we will help you reduce your nerves. CKAD exam braindumps can stimulate the real exam environment, so that you can know the procedure for the real exam, and your confidence for the exam will also be strengthened. In addition, in order to build up your confidence for CKAD Exam Materials, we are pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you full refund. You can receive your downloading link and password for CKAD training materials within ten minutes after payment.

Do some fresh things each day that moves you out of your comfort zone. If you stay cozy every day, you will gradually become lazy. Now, you have the opportunity to change your current conditions. Our CKAD real exam dumps are specially prepared for you. Try our CKAD study tool and absorb new knowledge. After a period of learning, you will find that you are making progress. The knowledge you have studied on our CKAD Exam Question will enrich your life and make you wise. Do not reject challenging yourself. Your life will finally benefit from your positive changes. Let us struggle together and become better. Then you will do not need to admire others' life. Our CKAD real exam dumps will fully change your life.

## CKAD Valid Test Questions, CKAD Reliable Test Question

To develop a new study system needs to spend a lot of manpower and financial resources, first of all, essential, of course, is the most intuitive skill learning materials, to some extent this greatly affected the overall quality of the learning materials. Our Linux Foundation Certified Kubernetes Application Developer Exam study training dumps do our best to find all the valuable reference books, then, the product we hired experts will carefully analyzing and summarizing the related materials, such as: Linux Foundation CKAD exam, eventually form a complete set of the review system. Experts before starting the compilation of "the CKAD Latest Questions ", has put all the contents of the knowledge point build a clear framework in mind, though it needs a long wait, but product experts and not give up, but always adhere to the effort, in the end, they finished all the compilation. So, you're lucky enough to meet our CKAD test guide I, and it's all the work of the experts. If you want to pass the qualifying exam with high quality, choose our products. We are absolutely responsible for you. Don't hesitate!

# Linux Foundation Certified Kubernetes Application Developer Exam Sample Questions (Q172-Q177):

## NEW QUESTION # 172

You are tasked With setting up a Kubernetes cluster With a service that exposes a web application, along with a database running as a stateful set The application needs to access the database through an internal IP address, but the database should not be accessible from outside the cluster. What are the steps involved to configure this, and what components should be used to achieve this setup?

**Answer:**

Explanation:

See the solution below with Step by Step Explanation.

Explanation:

Solution (Step by Step) :

1). Create the Database StatefulSet:

- Define a StatefulSet for your database, ensuring it uses a persistent volume to store its data.
- Specify the database image and any necessary configuration.
- Configure a service of type 'ClusterIP' for the database, accessible only within the cluster

```
apiVersion: apps/v1
kind: StatefulSet
metadata:
  name: my-database
spec:
  serviceName: my-database
  replicas: 1
  selector:
    matchLabels:
      app: my-database
  template:
    metadata:
      labels:
        app: my-database
    spec:
      containers:
        - name: my-database
          image: example/database:latest
          ports:
            - containerPort: 5432
          volumeClaimTemplates:
            - metadata:
                name: database-data
              spec:
                accessModes: ["ReadWriteOnce"]
                resources:
                  requests:
                    storage: 1Gi
---
apiVersion: v1
kind: Service
metadata:
  name: my-database
spec:
  selector:
    app: my-database
  ports:
    - port: 5432
      targetPort: 5432
  type: ClusterIP
```

2. Create the Application Deployment: - Create a Deployment for your web application, specifying the application image and required ports. - Add an environment variable to the application container to define the database connection string, using the database service's ClusterIP.

```
apiVersion: apps/v1
kind: Deployment
metadata:
  name: my-app
spec:
  replicas: 2
  selector:
    matchLabels:
      app: my-app
  template:
    metadata:
      labels:
        app: my-app
    spec:
      containers:
        - name: my-app
          image: example/webapp:latest
          ports:
            - containerPort: 80
          env:
            - name: DATABASE_URL
              value: "postgresql://user:password@my-database-service:5432/database"
```

3. Create the Application Service: - Create a service of type 'LoadBalancers' (or 'NodePort' if using a cloud provider) for your web application, exposing it to the outside world. - Ensure the service points to the application deployment.

```

apiVersion: v1
kind: Service
metadata:
  name: my-app-service
spec:
  selector:
    app: my-app
  ports:
    - port: 80
      targetPort: 80
  type: LoadBalancer

```

4. Verify the Setup: - Ensure all resources are created successfully by running 'kubectl get all' - Access the web application through the external IP address exposed by the LoadBalancer service. - Verify that the application can connect to the database. By following these steps, you've created a secure setup where the database is only accessible from within the cluster, while your web application can communicate with the database and expose its services to the outside world. , You have a Kubernetes cluster with multiple namespaces: 'dev', 'staging', and 'production'. You need to implement a network policy that allows pods in the 'dev' namespace to access services running in the 'staging' namespace. Pods in the 'dev' namespace should only be allowed to connect to ports 80 and 443 on the services in the 'staging' namespace. Implement the network policy configuration. A. See the solution below with Step by Step Explanation. Answer: A

### NEW QUESTION # 173

You need to configure a PodSecurityPolicy to restrict the capabilities of pods running in your Kubernetes cluster. You want to create a policy that allows pods to use only specific capabilities and prevent them from accessing host resources.

**Answer:**

Explanation:

See the solution below with Step by Step Explanation.

Explanation:

Solution (Step by Step) :

1. Create a PodSecurityPolicy:

- Create a PodSecurityPolicy YAML configuration file:

```

apiVersion: policy/v1beta1
kind: PodSecurityPolicy
metadata:
  name: restricted-pod-policy
spec:
  # Allow only specific capabilities
  allowedCapabilities:
  - NET_BIND_SERVICE
  # Disallow access to host resources
  hostNetwork: false
  hostPID: false
  hostIPC: false
  # Set resource requirements
  runAsUser:
    rule: "MustRunAs"
    # Run as non-root user
    ranges:
    - min: 1000
      max: 65535
  # Allow specific privileged containers
  privileged: false
  # Control access to the host filesystem
  fsGroup:
    rule: "MustRunAs"
    ranges:
    - min: 1000
      max: 65535
  # Control access to the host network
  selinux:
    rule: "RunAsAny"
    ranges:
    - min: 1000
      max: 65535
  # Control access to host processes
  volumes:
  - 'configMap'
  - 'emptyDir'
  - 'projected'
  - 'secret'
  - 'persistentVolumeClaim'
  - 'hostPath'
  - 'downwardAPI'

```

2. Apply the PodSecurityPolicy: - Apply the PodSecurityPolicy configuration to your Kubernetes cluster: `basn kubectl apply -f restricted-pod-policy.yaml`
3. Bind the Policy to ServiceAccount: - Create a RoleBinding or ClusterRoleBinding to bind the PodSecurityPolicy to a specific ServiceAccount or all users. - For example, to bind it to a ServiceAccount:

```

apiVersion: rbac.authorization.k8s.io/v1
kind: RoleBinding
metadata:
  name: restricted-pod-policy-binding
  namespace: my-namespace
roleRef:
  apiGroup: policy
  kind: PodSecurityPolicy
  name: restricted-pod-policy
subjects:
- kind: ServiceAccount
  name: my-service-account
  namespace: my-namespace

```

4. Test the Policy: - Create a pod using the ServiceAccount that has the PodSecurityPolicy applied. - Verify that the pod cannot access host resources or use unauthorized capabilities.

#### NEW QUESTION # 174

You have a Deployment named 'frontend-deployment' that runs a frontend application. This deployment is configured to use a 'StatefulSet' for its backend service. However, during a recent update, the update process for the 'StatefulSet' failed. You need to

understand how this failure might have impacted the deployment and the frontend application. Explain the possible causes of this failure and how it might have affected the frontend service.

**Answer:**

Explanation:

See the solution below with Step by Step Explanation.

Explanation:

Solution (Step by Step) :

The failure of a StatefulSet update can have significant repercussions for the 'frontend-deployment and its frontend application. Let's analyze the possible causes and their impact

1. Persistent Volume Provisioning Issues:

- StatefulSets rely on persistent volumes to maintain data and state across pod restarts.
- If the persistent volume provisioning fails, the pods in the StatefulSet might be unable to access their persistent volumes, causing application errors.

2. StatefulSet Pod Update Errors:

- If the update process for the StatefulSet pods encounters errors during the update, like image pull failures or container startup issues, the update might fail, leading to partially updated pods or even the removal of existing pods.

3. StatefulSet Pod Termination Issues:

- StatefulSets use a strict update strategy where pods are terminated in sequence based on their ordinal numbers.
- If the termination of a specific pod fails, the update process will be interrupted, leaving the StatefulSet in a partially updated state.

Impact on the Frontend Application:

- Data Loss: If the StatefulSet's persistent volume provisioning fails, the backend service might lose data, leading to data inconsistencies and potential loss for the frontend application.
  - Service Interruptions: The frontend application might experience service interruptions due to the backend service becoming unavailable or partially functional during the StatefulSet update failure-
  - Functionality Degradation: If the StatefulSet update process results in partially updated pods, the frontend application might encounter degraded functionality or erratic behavior
- Troubleshooting:
- Examine the 'StatefulSet' and its pod logs for error messages.
  - Check the persistent volume provisioning status and ensure the volumes are correctly mounted to the pods.
  - Analyze the pod events for any failures during the update process.

**NEW QUESTION # 175**

Context

You are tasked to create a secret and consume the secret in a pod using environment variables as follow:

Task

- \* Create a secret named another-secret with a key/value pair; key1/value4
- \* Start an nginx pod named nginx-secret using container image nginx, and add an environment variable exposing the value of the secret key key 1, using COOL\_VARIABLE as the name for the environment variable inside the pod See the solution below.

**Answer:**

Explanation:

Explanation

Solution:

```
student@node-1:~$ kubectl create secret generic some-secret --from-literal=key1=value1
secret/some-secret created
student@node-1:~$ kubectl get secret
NAME                TYPE                DATA  AGE
default-token-4kvr5  kubernetes.io/service-account-token  3      2d11h
some-secret          Opaque              1      5s
student@node-1:~$ kubectl run nginx-secret --image=nginx --dry-run=client -o yaml > nginx_secret.yml
student@node-1:~$ vim nginx_secret.yml
```

cache   1/1     Running   0           9s
student@node-1:~$ kubectl create secret generic some-secret --from-literal=key1=value4
secret/some-secret created
student@node-1:~$ kubectl get secret
NAME                                TYPE                                DATA   AGE
default-token-4kvr5                 kubernetes.io/service-account-token 3        2d11h
some-secret                         Opaque                              1        5s
student@node-1:~$ kubectl run nginx-secret --image=nginx --dry-run=client -o yaml > nginx_secret.yml
student@node-1:~$ vim nginx_secret.yml
student@node-1:~$ kubectl create -f nginx_secret.yml
pod/nginx-secret created
student@node-1:~$ kubectl get pods
NAME            READY   STATUS              RESTARTS   AGE
liveness-http   1/1     Running             0           6h38m
nginx-101        1/1     Running             0           6h39m
nginx-secret     0/1     ContainerCreating   0           4s
poller           1/1     Running             0           6h39m
student@node-1:~$ kubectl get pods
NAME            READY   STATUS    RESTARTS   AGE
liveness-http   1/1     Running   0           6h38m
nginx-101        1/1     Running   0           6h39m
nginx-secret     1/1     Running   0           8s
poller           1/1     Running   0           6h39m
student@node-1:~$

```

## NEW QUESTION # 176

Exhibit:

Context

A container within the poller pod is hard-coded to connect the nginxsvc service on port 90 . As this port changes to 5050 an additional container needs to be added to the poller pod which adapts the container to connect to this new port. This should be realized as an ambassador container within the pod.

Task

\* Update the nginxsvc service to serve on port 5050.

\* Add an HAproxy container named haproxy bound to port 90 to the poller pod and deploy the enhanced pod. Use the image haproxy and inject the configuration located at /opt/KDMC00101/haproxy.cfg, with a ConfigMap named haproxy-config, mounted into the container so that haproxy.cfg is available at /usr/local/etc/haproxy/haproxy.cfg. Ensure that you update the args of the poller container to connect to localhost instead of nginxsvc so that the connection is correctly proxied to the new service endpoint. You must not modify the port of the endpoint in poller's args . The spec file used to create the initial poller pod is available in /opt/KDMC00101/poller.yaml

- A. Solution:**  
 apiVersion: apps/v1  
 kind: Deployment  
 metadata:  
   name: my-nginx  
 spec:  
   selector:

```
matchLabels:
run: my-nginx
replicas: 2
template:
metadata:
labels:
run: my-nginx
spec:
containers:
- name: my-nginx
image: nginx
ports:
- containerPort: 90
```

This makes it accessible from any node in your cluster. Check the nodes the Pod is running on:

```
kubectl apply -f ./run-my-nginx.yaml
```

```
kubectl get pods -l run=my-nginx -o wide
```

```
NAME READY STATUS RESTARTS AGE IP NODE
```

```
my-nginx-3800858182-jr4a2 1/1 Running 0 13s 10.244.3.4 kubernetes-minion-905m
```

```
my-nginx-3800858182-kna2y 1/1 Running 0 13s 10.244.2.5 kubernetes-minion-ljyd
```

Check your pods' IPs:

```
kubectl get pods -l run=my-nginx -o yaml | grep podIP
```

```
podIP: 10.244.3.4
```

```
podIP: 10.244.2.5
```

- B. Solution:

```
apiVersion: apps/v1
```

```
kind: Deployment
```

```
metadata:
```

```
name: my-nginx
```

```
spec:
```

```
selector:
```

```
matchLabels:
```

```
run: my-nginx
```

```
- name: my-nginx
```

```
image: nginx
```

```
ports:
```

```
- containerPort: 90
```

This makes it accessible from any node in your cluster. Check the nodes the Pod is running on:

```
kubectl apply -f ./run-my-nginx.yaml
```

```
kubectl get pods -l run=my-nginx -o wide
```

```
NAME READY STATUS RESTARTS AGE IP NODE
```

```
my-nginx-3800858182-jr4a2 1/1 Running 0 13s 10.244.3.4 kubernetes-minion-905m
```

```
my-nginx-3800858182-kna2y 1/1 Running 0 13s 10.244.2.5 kubernetes-minion-ljyd
```

Check your pods' IPs:

```
kubectl get pods -l run=my-nginx -o yaml | grep podIP
```

```
podIP: 10.244.3.4
```

```
podIP: 10.244.2.5
```

**Answer: A**

## NEW QUESTION # 177

.....

Our company has collected the frequent-tested knowledge into our practice materials for your reference according to our experts' years of diligent work. So our CKAD exam materials are triumph of their endeavor. By resorting to our CKAD Practice Guide, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our CKAD training engine, the passing rate is 98-100 percent.

**CKAD Valid Test Questions:** [https://www.braindumpstudy.com/CKAD\\_braindumps.html](https://www.braindumpstudy.com/CKAD_braindumps.html)

Linux Foundation CKAD Real Dumps Free So you are advised to send your emails to our email address, Linux Foundation CKAD

Real Dumps Free Based in San Francisco, California and Bangalore, India, we have helped over one million professionals and companies across 150+ countries get trained, acquire certifications, and upskill their employees, Our CKAD study materials are willing to stand by your side and provide attentive service, and to meet the majority of customers, we sincerely recommend our CKAD study materials to all customers, for our rich experience and excellent service are more than you can imagine.

Along with our enterprising spirit, we attracted a lot of candidates holding the same idea, and not only the common ground makes us be together, but our brilliant CKAD latest questions make it.

## Real Linux Foundation CKAD Dumps PDF - Achieve Success In Exam

Time management is about making the best use of your most CKAD precious resource—time, So you are advised to send your emails to our email address, Based in San Francisco, California and Bangalore, India, we have helped over one million Exam CKAD Quick Prep professionals and companies across 150+ countries get trained, acquire certifications, and upskill their employees.

Our CKAD study materials are willing to stand by your side and provide attentive service, and to meet the majority of customers, we sincerely recommend our CKAD study materials to all customers, for our rich experience and excellent service are more than you can imagine.
