I know that we don't say much better than letting you experience our ANVE Training Questions yourself. You can free download the demos of the ANVE learning quiz to have a try!

Axis Network Video Exam Sample Questions (Q243-Q248):

NEW QUESTION # 243

Image flickering is caused by

- A. IR light
- B. Lack of light

- C. Fluorescent light
- D. White light

Answer: C

NEW QUESTION # 244

Working with the end user, you find that they need a cost-effective mini dome with a varifocal lens. DC-iris and audio capabilities are not required. Which of the following products would best fit the requirements?

- A. AXIS M3204
- B. AXIS P3343
- C. AXIS P3301
- D. AXIS M1113

Answer: A

NEW QUESTION # 245

The purpose of a DNS server is to

- A. Translate host names such as www.axis.com to MAC addresses.
- B. Translate host names such as www.axis.com to IP addresses.
- C. Allocate MAC addresses to devices within a network.
- D. Allocate IP addresses to devices within a network.

Answer: B

NEW QUESTION # 246

Which setting would best adjust a hard yellow tint as shown in the pictures below?

- A. Image contrast
- B. Image brightness
- C. White balance
- D. Color saturation

Answer: C

Explanation:

The setting that would best adjust a hard yellow tint in the images is the white balance. Adjusting the white balance corrects color casts by accounting for the color temperature of the light source, thereby producing more natural colors in the image. In the example images, modifying the white balance would neutralize the yellow tint and restore accurate colors. Axis cameras have white balance settings that can be adjusted manually or set to automatic for optimal color representation. Further details can be found in Axis Communications' camera setup and image optimization documentation.

NEW QUESTION # 247

A P-iris lens is

- A. Axis' standard for DC-iris.
- B. An iris specially made for zoom lenses.
- C. A DC-iris with feedback.
- D. An iris with higher light sensitivity.

Answer: C
