SCA-C01 Relevant Questions | Latest SCA-C01 Exam Dumps

While all of us enjoy the great convenience offered by SCA-C01 information and cyber networks, we also found ourselves more vulnerable in terms of security because of the inter-connected nature of information and cyber networks and multiple sources of potential risks and threats existing in SCA-C01 information and cyber space. Taking this into consideration, our company has invested a large amount of money to introduce the advanced operation system which not only can ensure our customers the fastest delivery speed but also can encrypt all of the personal SCA-C01 information of our customers automatically. In other words, you

can just feel rest assured to buy our SCA-C01 exam materials in this website and our advanced operation system will ensure the security of your personal information for all it's worth.

Tableau Server Certified Associate Exam Sample Questions (Q70-Q75):

NEW QUESTION # 70

What type of information is stored in the tsm maintenance backup -f <filename>.tsbak command?

- A. Topology data
- B. Notification settings
- C. SMTP server settings
- D. Repository data

Answer: D

Explanation:

The tsm maintenance backup command creates a backup file (with a .tsbak extension) that captures critical data needed to restore Tableau Server in case of failure or migration. This backup primarily includes:

Repository data: This encompasses the PostgreSQL database, which stores metadata such as workbooks, data sources, user information, permissions, schedules, and subscriptions.

Configuration data: This includes server settings like authentication methods, port configurations, and service layouts, but it does not include topology data as a separate entity (topology is part of the configuration).

The command does not back up the following:

Extract files (stored in the File Store), which must be backed up separately if needed.

Log files, which are archived using tsm maintenance ziplogs.

Option A (Notification settings) is incorrect because while notification settings are part of the configuration data stored in the repository, they are not the primary focus of the backup. The broader category is "repository data." Option B (SMTP server settings) is also incorrect for the same reason-SMTP settings are configuration data within the repository, but the backup is not limited to just these settings.

Option D (Topology data) is incorrect because topology data (e.g., how services are distributed across nodes) is part of the configuration included in the backup, but it's not stored as a standalone item. The .tsbak file is centered on the repository database.

NEW QUESTION # 71

True or False:

Updates to a published data source flow to all connected workbooks, but only when the workbook is published to the server

- A. FALSE
- B. TRUE

Answer: A

NEW QUESTION # 74

Prior to sending Tableau Desktop log files to Tableau Technical Support, an essential first step is to create clean logs. Which option below best describes the correct course of action for this initial step?

- A. In the My Tableau Repository folder, delete the current Logs folder to create a clean slate and save space
- B. In the My Tableau Repository folder, transfer the current Logs folder to another temporary location in your local machine
- C. In the My Tableau Repository folder, rename the current Logs folder to Logs_Backup. This effectively archives the outdated logs and will force Tableau Desktop to create a new and clean Logs folder

Answer: C

Explanation:
