PECB Certified ISO/IEC 27001 Lead Implementer Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20
Scenario 2: Beauty is a cosmetics company that has recently switched to an e-commerce model, leaving the traditional retail. The top management has decided to build their own custom platform in-house and outsource the payment process to an external provider operating online payments systems that support online money transfers.
Due to this transformation of the business model, a number of security controls were implemented based on the identified threats and vulnerabilities associated to critical assets. To protect customers' information.
Beauty's employees had to sign a confidentiality agreement. In addition, the company reviewed all user access rights so that only authorized personnel can have access to sensitive files and drafted a new segregation of duties chart.
However, the transition was difficult for the IT team, who had to deal with a security incident not long after transitioning to the e commerce model. After investigating the incident, the team concluded that due to the out- of-date anti-malware software, an attacker gamed access to their files and exposed customers' information, including their names and home addresses.
The IT team decided to stop using the old anti-malware software and install a new one which would automatically remove malicious code in case of similar incidents. The new software was installed in every workstation within the company. After installing the new software, the team updated it with the latest malware definitions and enabled the automatic update feature to keep it up to date at all times. Additionally, they established an authentication process that requires a user identification and password when accessing sensitive information.
In addition, Beauty conducted a number of information security awareness sessions for the IT team and other employees that have access to confidential information in order to raise awareness on the importance of system and network security.
Based on the scenario above, answer the following question:
Which situation described in scenario 2 Indicates service unavailability?

- A. Lucas was no! able to access the website with his credentials
- B. Lucas was asked to change his password weekly
- C. Attackers still had access to the data when Solena delivered a press release

Answer: A

NEW QUESTION # 21
Based on scenario 5, what can be considered as a residual risk to Socket Inc.?

- A. Files arc decrypted once the user is authenticated
- B. The use of passwords with at least 12 characters containing a mixture of uppercase and lowercase letters, symbols, and numbers
- C. Users with access to cloud storage files are segregated on a separate network

Answer: A

NEW QUESTION # 22
Scenario 10: NetworkFuse develops, manufactures, and sells network hardware. The company has had an operational information security management system (ISMS) based on ISO/IEC 27001 requirements and a quality management system (QMS) based on ISO 9001 for approximately two years. Recently, it has applied for a j
