

100% Pass 2026 Pass-Sure 4A0-D01: Nokia Data Center Fabric Fundamentals Exam Exam Simulator Fee

BTW, DOWNLOAD part of RealExamFree 4A0-D01 dumps from Cloud Storage: https://drive.google.com/open?id=1mwUan_Gkn3AsmJM7Zcr1Zx_cckl58WEC

There are also free demos of our 4A0-D01 study materials on the website that you can download before placing the orders. Taking full advantage of our 4A0-D01 practice guide and getting to know more about them means higher possibility of winning. And our 4A0-D01 Exam Quiz is a bountiful treasure you cannot miss. Not only the content is the latest and valid information, but also the displays are varied and interesting. Just have a try and you will love them!

These Nokia 4A0-D01 exam questions have a high chance of coming in the actual 4A0-D01 test. You have to memorize these 4A0-D01 questions and you will pass the Nokia 4A0-D01 test with brilliant results. The price of Nokia 4A0-D01 updated exam dumps is affordable.

4A0-D01 Latest Exam Materials, Pdf Demo 4A0-D01 Download

RealExamFree is here to help of you to make your 4A0-D01 certification dream true by providing the best valid and latest exam Nokia 4A0-D01 study reference. If you still have doubt about our 4A0-D01 exam dumps. Please pay attention to our 4A0-D01 free demo on the product page. You can download the free demo and have a try. Then I believe you can make the decision. Generally, there are explanations along with the questions, which will make you learn more about the knowledge about 4A0-D01 Actual Test. Please prepare well with the 4A0-D01 study material we provide for you. We guarantee you can pass the 4A0-D01 actual test with a high score.

Nokia 4A0-D01 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Nokia DC Fabric Solution: This section of the exam measures skills of a Data Center Network Engineer and covers the architecture and benefits of modern Layer 3 data center networks. It includes an overview of BGP-based routing, VXLAN and EVPN overlays for multi-tenant environments, and key features of the SR Linux operating system. The section also explains how APIs are used for external configuration and introduces the Fabric Services System's management capabilities.
Topic 2	<ul style="list-style-type: none"> • SR Linux Configuration and Routing: This section of the exam measures skills of a Network Automation Specialist and focuses on configuring and managing SR Linux systems. It examines the YANG-driven CLI, JSON output, environment variables, and static and dynamic routing. Learners also explore BGP, ECMP, IP-VRF, MAC-VRF, and the use of VXLAN with EVPN to implement both Layer 2 and Layer 3 overlays, including symmetric and asymmetric models.
Topic 3	<ul style="list-style-type: none"> • SR Linux Logging, Monitoring, and Filtering: This section of the exam measures skills of a Data Center Network Engineer and addresses how to implement logging, monitoring, and traffic filtering in SR Linux. It explains log file usage, ACL types, CPM filtering, and packet capture filters. Configuration tasks involve applying ACLs and monitoring network activity using capture tools.
Topic 4	<ul style="list-style-type: none"> • Module 5 – EDA (Event Driven Automation) Introduction

Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which of the following statements about the CLI modes in Nokia's SR Linux is FALSE?

- A. Users can switch from one mode to another using the enter command.
- B. The running mode is used to make configuration changes.
- C. The show mode uses pre-defined reports to display operational information.
- D. The state mode displays the current configuration and operational information.

Answer: A

Explanation:

In Nokia SR Linux, users switch between CLI modes using specific commands like configure or exit, not an enter command. The enter command is not used for mode switching.

NEW QUESTION # 31

Which of the following statements about resilient ECMP load balancing is TRUE?

- A. A different hash seed is used on downstream routers to ensure that flows are randomly distributed across all eligible router interfaces.
- B. Hash buckets are used to ensure that flows egressing the same interface on one router use different egress interfaces on downstream routers.
- C. The hash value used to distribute traffic is calculated as a modulo function on specific fields of the packet header.
- D. When one of the next-hops fail, only flows currently egressing to that next-hop are impacted.

Answer: D

Explanation:

In resilient ECMP load balancing, when a next-hop fails, only the flows that were using that specific next-hop are affected and need to be redistributed, minimizing disruption to other flows.

NEW QUESTION # 32

Which of the following statements about using BFD with BGP is FALSE?

- A. It can help rapidly detect link failures.

- B. BGP is notified if several BFD control packets are missed.
- C. The BFD endpoints agree on the send/receive rate of control packets.
- **D. Using BFD can speed up the BGP advertisement interval.**

Answer: D

Explanation:

BFD helps detect link failures rapidly and notifies BGP to trigger route updates quickly, but it does not speed up the BGP advertisement interval itself. BGP advertisement intervals are controlled by BGP timers, not by BFD.

NEW QUESTION # 33

Which of the following statements about the YANG model used in Nokia's SR Linux is FALSE?

- A. All configuration and state information is defined as a YANG model.
- B. The YANG model can be converted into other formats such as JSON or XML.
- C. The YANG model provides a standardized way for applications to retrieve SR Linux configuration and state information.
- **D. The YANG model uses a tree structure with "leafs" as the branches and "containers" as the data components.**

Answer: D

Explanation:

In YANG models, "leafs" are the data nodes (not branches), and "containers" group related data nodes. The statement incorrectly reverses their roles by calling leafs branches and containers data components.

NEW QUESTION # 34

Which of the following statements about the VXLAN tunneling in data centers is FALSE?

- A. VLXAN tunneling is used to provide Layer 2 connectivity between workloads over a common underlay network.
- **B. Each VXLAN tunnel endpoint is automatically assigned with a unique VNI value.**
- C. EVPN routes are exchanged between VXLAN tunnel endpoints.
- D. VXLAN tunnel endpoints can be on hypervisors, leaf routers, or datacenter gateways.

Answer: B

Explanation:

VXLAN tunnel endpoints (VTEPs) are configured with VNI (VXLAN Network Identifier) values, but these VNIs are not automatically assigned; they must be explicitly configured to define Layer 2 segments.

NEW QUESTION # 35

.....

Taking RealExamFree Nokia Data Center Fabric Fundamentals Exam(4A0-D01) practice test questions are also important. These 4A0-D01 practice exams include questions that are based on a similar pattern as the finals. This makes it easy for the candidates to understand the Nokia Data Center Fabric Fundamentals Exam (4A0-D01) exam question paper and manage the time. It is indeed a booster for the people who work hard and do not want to leave any chance of clearing the 4A0-D01 Exam with brilliant scores. These Nokia Data Center Fabric Fundamentals Exam (4A0-D01) practice test questions also boost your confidence.
