EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

Question:

A company is experiencing a sudden surge in website traffic due to a successful marketing campaign. The company's IT infrastructure is struggling to cope with the increased demand, and the website is slowing down.

Which cloud computing characteristic would be beneficial in this situation?

- A. Measured service
- **B. Rapid elasticity**
- C. On-demand self-service
- D. Resource pooling

Answer: B

Explanation:

Rapid elasticity is a cloud computing characteristic that allows resources to be scaled up or down quickly and automatically, depending on demand. In the scenario of a sudden traffic surge, rapid elasticity enables the infrastructure to handle increased loads without manual intervention.

* Measured service: Refers to monitoring and billing based on resource usage.

* On-demand self-service: Allows users to provision resources as needed.

* Resource pooling: Involves sharing resources among multiple users.

NEW QUESTION # 15

Question:

Which activity is performed in the fifth stage of penetration testing?

- A. Determining the risk levels by exploited vulnerabilities
- B. Determining if persistence access can be maintained
- C. Collecting the evidence of the exploited vulnerabilities
- **D. Checking the compromised system or network**

Answer: D

Explanation:

The fifth stage of penetration testing is known as post-exploitation or analysis of the compromised environment. It involves:

* Checking the compromised system/network to determine the scope of access.

* Identifying potential for further exploitation.

* Gathering information about the environment.

* Option A relates to the risk assessment phase.

* Option B is typically done in post-exploitation but isn't the main step.

* Option D (collecting evidence) is more related to reporting/documentation at the end.

NEW QUESTION # 16

Question:

A company is looking for a backup solution that can reduce its IT management overhead and offer scalability and flexibility. Which type of backup solution would meet these requirements?

- A. Tape-based backup
- B. Agent-based backup
- **C. Cloud-based backup**
- D. Image-based backup

Answer: C

Explanation:

Cloud-based backup solutions are managed by third-party providers and offer easy scalability, flexibility, and reduced IT management overhead. They allow businesses to focus on operations while the provider manages infrastructure, updates, and capacity.

* Image-based backup: Captures entire system images but may still require local storage and management.

* Agent-based backup: Deploys agents to servers, requiring management of the agents.

* Tape-based backup: Involves hardware and manual processes for storage, increasing management burden.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Backup and Cloud Integration.

NEW QUESTION # 17

Question:

What is the maximum number of VLANs that can be supported with one VLAN tag field?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

In Ethernet networking, VLANs (Virtual Local Area Networks) are identified using a 12-bit VLAN ID field in the IEEE 802.1Q standard. Since 12 bits can represent $2^{12} = 4096$ unique values, the maximum number of VLANs that can be supported is 4096.

* 1024 and 2048: These values are less than the maximum and represent subsets of possible VLANs.

* 8192: This exceeds the 12-bit limit and is not supported by the standard.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Storage Networking Technologies.

NEW QUESTION # 18

Question:

A storage administrator needs to track the performance and availability of storage components and services.

Which storage management function would provide this information?

- A. Reporting
- B. Alerting
- C. Monitoring
- D. Infrastructure discovery

Answer: C

Explanation:

Monitoring is the ongoing process of observing and tracking the performance and availability of IT infrastructure, including:

Storage devices

File systems

Ports and connectivity

It helps ensure service levels are met and detect potential issues.

* Reporting: Summarizes data (often based on monitoring data).

* Alerting: Notifies of specific events or thresholds (also uses monitoring data).

* Infrastructure discovery: Detects and inventories devices.
