SPLK-1003 Exam Tests, SPLK-1003 Braindumps, SPLK-1003 Actual Test

Do you have registered for Splunk SPLK-1003 exam? With the drawing near of the examination, I still lack of confidence to pass SPLK-1003 test. Then I have not enough time to read reference books. About the above problem, how should I do? Is there shortcut to pass the exam? Do you have such a mood like that, now? There is no need for hurry. Even if the examination time is near, you are also given the opportunity to prepare for SPLK-1003 Certification test. And what is the opportunity? It is

TestBraindump SPLK-1003 dumps which is the most effective materials and can help you prepare for the exam in a short period of time. What's more, TestBraindump practice test materials have a high hit rate. 100% satisfaction guarantee! As well as you memorize these questions and answers in our dumps, you must pass Splunk SPLK-1003 certification.

Splunk Enterprise Certified Admin Sample Questions (Q15-Q20):

NEW QUESTION # 15
Given a forwarder with the following outputs.conf configuration:
[tcpout : mypartner]
Server = 145.188.183.184:9097
[tcpout : hfbank]
server = inputsl . mysplunkhfs . corp : 9997 , inputs2 . mysplunkhfs . corp : 9997 Which of the following is a true statement?

- A. Data will continue to flow to hfbank if 145.1 g a) 183.184 : 9097 is unreachable.
- B. Data is encrypted to mypartner because 145.183.184 : 9097 is specified by IP.
- C. Data will eventually stop flowing everywhere if 145.188.183.184 : 9097 is unreachable.
- D. Data is not encrypted to mypartner because 145.188 .183.184 : 9097 is specified by IP.

Answer: A

Explanation:
The outputs.conf file defines how forwarders send data to receivers1. You can specify some output configurations at installation time (Windows universal forwarders only) or the CLI, but most advanced configuration settings require that you edit outputs.confl.
The [tcpout:...] stanza specifies a group of forwarding targets that receive data over TCP2. You can define multiple groups with different names and settings2.
The server setting lists one or more receiving hosts for the group, separated by commas2. If you specify multiple hosts, the forwarder load balances the data across them2.
Therefore, option A is correct, because the forwarder will send data to both inputsl.mysplunkhfs.corp:9997 and inputs2.mysplunkhfs.corp:9997, even if 145.188.183.184:9097 is unreachable.

NEW QUESTION # 16
What is the correct example to redact a plain-text password from raw events?

- A. in transforms.conf[identity]REGEX-redact_pw = s/password=([
