## WGU Cloud Deployment and Operations Sample Questions (Q58-Q63):

### NEW QUESTION # 58

(Which AWS service is used to provide remote workers with secure access to AWS resources?)

- **A. Client VPN**
- B. Network Firewall
- C. NAT instance
- D. Transit Gateway

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

AWS Client VPN is used to provide remote workers with secure access to AWS resources by establishing a VPN connection to the VPC, ensuring encrypted access to private networks. The WGU Cloud Deployment and Operations Study Guide (Section 3.2, Client VPN) states, "Client VPN enables secure remote access to AWS resources within a VPC, using mutual authentication and encryption to protect data for remote workers." Transit Gateway manages inter-VPC routing, Network Firewall filters traffic, and NAT instances handle outbound internet access, none of which are designed for remote worker access.

### NEW QUESTION # 59

(Which two protocols are supported in security group rules? Choose 2 answers.)

- **A. UDP**
- **B. ICMP**
- C. MPLS
- D. BGP

**Answer: A,B**

Explanation:

Security group rules in AWS support the Internet Control Message Protocol (ICMP) and User Datagram Protocol (UDP) for defining inbound and outbound traffic rules. These protocols are commonly used for network communication and monitoring. The WGU Cloud Deployment and Operations Study Guide (Section 3.2, Security Groups) states, "Security groups support protocols like ICMP for diagnostic traffic and UDP for streaming or low-latency applications, allowing fine-grained control over instance access." BGP and MPLS are routing or network layer protocols not supported by security group rules.

### NEW QUESTION # 60

(What should be configured in Systems Manager to set the error threshold for automation documents?)

- **A. Rate control**
- B. Maintenance windows
- C. Session preferences
- D. Resource group

**Answer: A**

Explanation:

In AWS Systems Manager, the error threshold for automation documents is configured using rate control.

Rate control allows administrators to define the maximum number of errors or concurrent executions that can occur before an automation task is throttled or stopped, ensuring system stability. The WGU Cloud Deployment and Operations Study Guide (Section 5.1, Systems Manager Automation) explicitly states, "Rate control settings in Automation documents can be used to specify the maximum number of errors allowed during execution, helping to manage error thresholds effectively." Resource groups, session preferences, and maintenance windows do not directly address error thresholds.

### NEW QUESTION # 61

(A company is using the CloudWatch agent on its EC2 Linux instances. The company needs to determine how long read requests have waited on the instance's I/O for proper sizing of the instance. Which metric should the company use?)

- A. disk\_io\_time
- B. disk\_read\_ops
- C. diskio\_reads
- D. diskio\_read\_bytes

**Answer: A**

Explanation:

The `disk\_io\_time` metric, collected by the CloudWatch agent on EC2 Linux instances, measures the total time (in milliseconds) that read and write requests have waited on I/O, helping to assess disk performance for instance sizing. The WGU Cloud Deployment and Operations Study Guide (Section 4.1, CloudWatch Agent Metrics) states, "The `disk\_io\_time` metric, available via the CloudWatch agent, tracks the time spent waiting for I/O operations, providing insight into disk contention for optimizing EC2 instance sizing." disk\_read\_ops, diskio\_reads, and diskio\_read\_bytes measure operation counts or bytes, not wait times.

### NEW QUESTION # 62

(Which two retention periods are supported by Performance Insights? Choose 2 answers.)

- A. 2 years
- B. 1 day
- C. 1 year
- D. 7 days

**Answer: C,D**

Explanation:

Amazon RDS Performance Insights supports retention periods of 7 days and 1 year for storing performance data, depending on the configuration and edition. The default retention is 7 days for standard monitoring, while enabling enhanced monitoring or the Performance Insights extended retention feature allows data to be retained for up to 1 year. The WGU Cloud Deployment and Operations Study Guide (Section 7.2, Performance Insights) states, "Performance Insights offers a 7-day retention period by default, with an option to extend to 1 year for detailed historical analysis, supporting cost and performance optimization." Options A (1 day) and D (2 years) are not supported retention periods.

### NEW QUESTION # 63
