

300-620 Latest Examprep & 300-620 Exam Prep

BONUS!!! Download part of PassExamDumps 300-620 dumps for free: <https://drive.google.com/open?id=169W7-EtJyloo3nJ3ZIXAxHBr-b3zvCFI>

The PassExamDumps is one of the top-rated and trusted platforms that are committed to making the Implementing Cisco Application Centric Infrastructure (300-620) certification exam journey successful. To achieve this objective PassExamDumps has hired a team of experienced and qualified Cisco 300-620 Exam trainers. They work together and put all their expertise to maintain the top standard of Implementing Cisco Application Centric Infrastructure (300-620) practice test all the time.

Cisco 300-620 certification exam is designed for network professionals, system engineers, and technical architects who are responsible for implementing and managing Cisco ACI solutions. 300-620 exam is ideal for those who have experience with Cisco technologies and have a solid understanding of network protocols, data center architecture, and virtualization. Candidates who are familiar with Cisco Nexus switches, Cisco UCS servers, and VMware virtualization will find 300-620 Exam to be a natural fit.

Fast-Download 300-620 Latest Examprep - Pass 300-620 Once - First-Grade 300-620 Exam Prep

You must want to know your scores after finishing exercising our 300-620 study materials, which help you judge your revision. Now, our windows software and online test engine of the 300-620 study materials can meet your requirements. You can choose from two modules: virtual exam and practice exam. Then you are required to answer every question of the 300-620 Study Materials. In order to make sure you have answered all questions, we have answer list to help you check.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q264-Q269):

NEW QUESTION # 264

The company's Cisco ACI fabric hosts multiple customer tenants. To meet a service level agreement, the company is constantly monitoring the Cisco ACI environment. Syslog is one of the methods used for monitoring. Only events related to leaf and spine environmental information without specific customer data should be logged. To which ACI object must the configuration be applied to meet these requirements?

- A. access policy
- B. infra tenant
- C. fabric policy
- D. switch profile

Answer: C

NEW QUESTION # 265

A network engineer configures the Cisco ACI fabric to connect to vCenter with these requirements:
Port groups must be automatically created on the distributed virtual switch.
Port groups must use the VLAN allocation in the range between 20-30.
The deployment must optimize the CAM space on the leaf switches.

Which set of actions meets these criteria?

- A. Create a static VLAN pool with the VLAN range of 20-30.
Create a physical domain and associate it with the VLAN pool.
Create the EPG and associate the domain.
Set the deployment immediacy to Immediate.
- **B. Create a dynamic VLAN pool with the VLAN range of 20-30.
Create a VMM domain and associate it with the VLAN pool.
Create the EPG and associate the domain.
Set the deployment immediacy to On Demand.**
- C. Create a static VLAN pool with the VLAN range of 20-30.
Create a VMM domain and associate it with the VLAN pool.
Create the EPG and associate the domain.
Set the deployment immediacy to Immediate.
- D. Create a dynamic VLAN pool with the VLAN range of 20-30.
Create a physical domain and associate it with the VLAN pool.
Create the EPG and associate the domain.
Set the deployment immediacy to On Demand.

Answer: B

NEW QUESTION # 266

A customer migrates a legacy environment to Cisco ACI. A Layer 2 trunk is configured to interconnect the two environments. The customer also builds ACI fabric in an application-centric mode. Which feature should be enabled in the bridge domain to reduce instability during the migration?

- A. Set Multi-Destination Flooding to Flood in Encapsulation.
- **B. Set Multi-Destination Flooding to Flood in BD.**
- C. Disable Endpoint Dataplane Learning
- D. Enable Flood in Encapsulation.

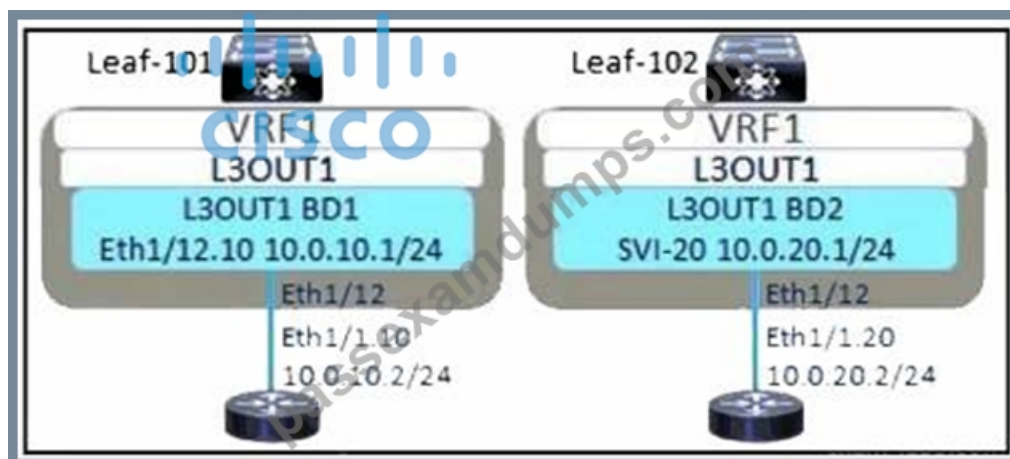

Answer: B

Explanation:

To reduce instability during the migration of a legacy environment to Cisco ACI, the feature that should be enabled in the bridge domain is to Set Multi-Destination Flooding to Flood in BD (Option A). This setting allows unknown multicast, broadcast, and unknown unicast traffic to be flooded within the bridge domain, which can help prevent traffic loss during the migration process.

NEW QUESTION # 267

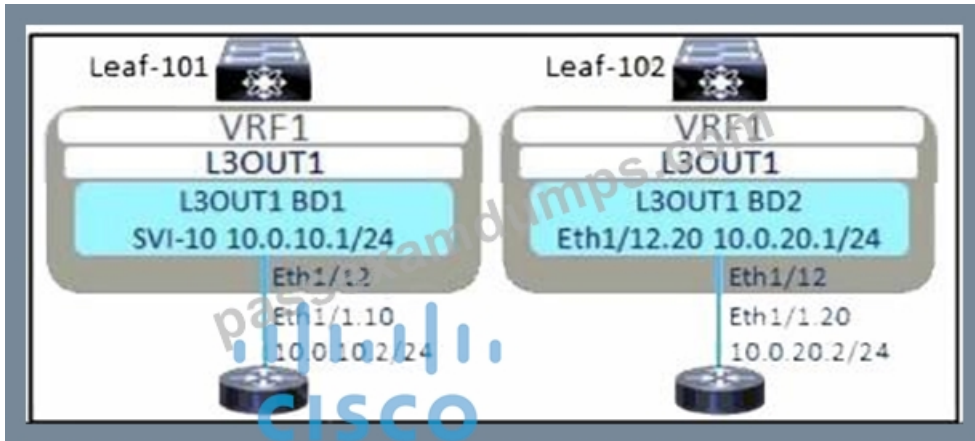

The customer is looking for redundant interconnection of the existing network to the new ACI fabric. Unicast and multicast traffic must be routed between the two networks. Which L3Out implementation meets these requirements?

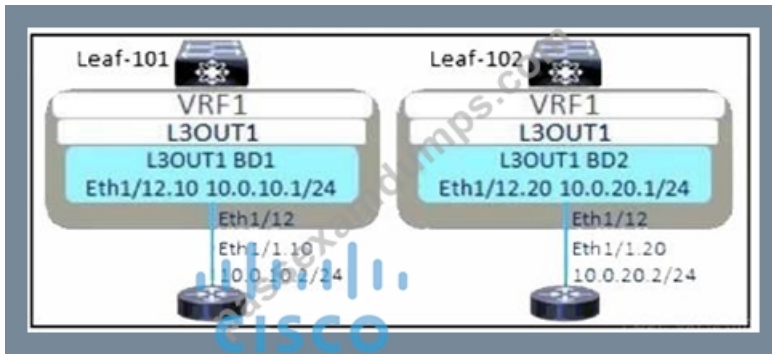

- A.

- B.

- C.

- D.

Answer: B

Explanation:

For a redundant interconnection that routes both unicast and multicast traffic, the L3Out (Layer 3 Outside) implementation in Cisco ACI should include the following:

Redundant Connections: Ensure there are at least two connections from the ACI fabric to the external network for redundancy.

These connections should be to different leaf switches if possible.

Routing Protocols: Configure a routing protocol that supports both unicast and multicast routing. OSPF or EIGRP can be used for unicast, and PIM (Protocol Independent Multicast) should be configured for multicast.

Route Redistribution: Set up route redistribution between the ACI fabric and the external network to ensure that routes are shared across both networks.

Multicast Configuration: Enable multicast routing within the ACI fabric and configure the necessary multicast policies.

Contract and Policy Configuration: Define contracts and policies that allow the required unicast and multicast traffic to flow between the ACI fabric and the external network.

Reference:

Cisco documentation on configuring L3Outs in ACI

Cisco white paper on ACI Multicast Routing

NEW QUESTION # 268

Refer to the exhibit.

Create vCenter Domain

vCenter Credentials:

Profile name	Username	Description
Lab-VCenter	admin	

vCenter:

Name	IP	Type	Stats Collection
Lab-VCenter	vcenter.aci.lab	vCenter	Disabled

Port Channel Mode: select a value

- Static Channel – Mode On
- LACP Active
- LACP Passive
- MAC Pinning+
- MAC Pinning-Physical-NIC-load

Cancel Submit

An engineer is implementing Cisco ACI - VMware vCenter integration for a blade server that lacks support of bonding. Which port channel mode results in "route based on originating virtual port" on the VMware VDS?

- A. MAC Pinning+
- B. LACP Active
- C. MAC Pinning-Physical-NIC-load
- D. LACP Passive
- E. Static Channel - Mode On

Answer: A

NEW QUESTION # 269

.....

Generally speaking, Cisco certification has become one of the most authoritative voices speaking to us today. Let us make our life easier by learning to choose the proper 300-620 test answers, pass the 300-620 exam, obtain the certification, and be the master of your own life, not its slave. Our 300-620 Exam Questions are exactly what you are looking for. With three different versions of 300-620 exam study materials are shown on our website, so you will be glad to know you have so many different ways to study.
